Reference Manual Number	Date	Description
FBM-M192-A	2017/04	First edition

1.　Overview

1.1.　Overview of the FB Library

This FB library is for using NZ2GF2B1-32D, NZ2GF2B1-32T, NZ2GF2B1-32TE, NZ2GF2B1-32DT, and NZ2GF2B1-32DTE CC-Link IE Field Network remote I/O modules.
1.2.　Function of the FB Library

| Item	Description
M+NZ2GF2B132_InitialProcessing	Performs the initial processing after power-on.
M+NZ2GF2B132_SetOpeCondition	Performs the operation condition setting.
M+NZ2GF2B132_ErrorOperation	Monitors the error status and warning status, and performs error clear.

MELSOFT Library

1.3. System Configuration Examples

The following examples show system configurations when using the I/O modules (NZ2GF2B1-32D, NZ2GF2B1-32T, NZ2GF2B1-32TE, NZ2GF2B1-32DT, NZ2GF2B1-32DTE) as intelligent device stations.

(1) Q series system configuration

Master/local module (QJ71GF11-T2)

CPU module (QCPU)

Power supply module

I/O module
(NZ2GF2B1-32D, NZ2GF2B1-32T, NZ2GF2B1-32TE,
NZ2GF2B1-32DT, NZ2GF2B1-32DTE)

Master station
(Station No.0)

Intelligent device station
(Station No.1)

Ethernet cable (1000BASE-T)

(2) L series system configuration

END cover (L6EC)

Master/local module (LJ71GF11-T2)

CPU module (LCPU)

Power supply module

I/O module
(NZ2GF2B1-32D, NZ2GF2B1-32T, NZ2GF2B1-32TE,
NZ2GF2B1-32DT, NZ2GF2B1-32DTE)

Master station
(Station No.0)

Intelligent device station
(Station No.1)

Ethernet cable (1000BASE-T)

1.4. Setting the CC-Link IE Field Network Master/Local Module

This section explains the settings of CC-Link IE Field Network master/local module based on Section "1.3 System Configuration Examples". Set the following items using GX Works2.

(1) Network parameters

Item	Description
Network Type	Select the CC IE Field (Master Station).
Start I/O No.	Set the start I/O number of the master/local module in increments of 16 points. Set "0000".
Network No.	Set the network number of the master/local module. Set "1".

* Select this checkbox.

☑ Set network configuration setting in CC IE Field configuration window

	Module 1	Module 2
Network Type	CC IE Field (Master Station) ▼	None ▼
Start I/O No.	0000	
Network No.	1	
Total Stations	0	
Group No.		
Station No.	0	
Mode	Online (Normal Mode) ▼	▼
	CC IE Field Configuration Setting	
	Network Operation Settings	
	Refresh Parameters	
	Interrupt Settings	
	Specify Station No. by Parameter ▼	

MELSOFT Library

(2) CC IE Field configuration setting

Item	Description
Station No.	Set the station number of the intelligent device station connected to the master station. Set "1".
Station Type	Set the station type of the intelligent device station connected to the master station. Set "Intelligent Device Station".
RX/RY Setting	Set assignment for RX/RY for the intelligent device station connected to the master station. (a) Start Set "0000". (b) End Set "001F".
RWw/RWr Setting	Set assignment for RWw/RWr for the intelligent device station connected to the master station. (a) Start Set "0000". (b) End Set "0013".

[When using NZ2GF2B1-32D]

	No.	Model Name	STA#	Station Type	RX/RY Setting			RWw/RWr Setting			Refresh Device
					Points	Start	End	Points	Start	End	RX
▥	0	Host Station	0	Master Station							
▱	1	NZ2GF2B1-32D	1	Intelligent Device Station	32	0000	001F	20	0000	0013	

*Set the module to be used according to the environment.

(3) Refresh parameter setting

Item	Description	Setting value
Transfer SB	Select the link refresh range of SB device.	•"Link Side　Points"　　：512 •"Link Side　Start"　　：0000 •"PLC Side　Dev. Name"：SB •"PLC Side　Start"　　：0000
Transfer SW	Select the link refresh range of SW device.	•"Link Side　Points"　　：512 •"Link Side　Start"　　：0000 •"PLC Side　Dev. Name"：SW •"PLC Side　Start"　　：0000
Transfer 1	Select the link refresh range of RX device.	•"Link Side　Dev. Name"：RX •"Link Side　Points"　　：32 •"Link Side　Start"　　：0000 •"PLC Side　Dev. Name"：M •"PLC Side　Start"　　：1024
Transfer 2	Select the link refresh range of RY device.	•"Link Side　Dev. Name"：RY •"Link Side　Points"　　：32 •"Link Side　Start"　　：0000 •"PLC Side　Dev. Name"：M •"PLC Side　Start"　　：2048
Transfer 3	Select the link refresh range of RWr device.	•"Link Side　Dev. Name"：RWr •"Link Side　Points"　　：20 •"Link Side　Start"　　：0000 •"PLC Side　Dev. Name"：W •"PLC Side　Start"　　：1000
Transfer 4	Select the link refresh range of RWw device.	•"Link Side　Dev. Name"：RWw •"Link Side　Points"　　：20 •"Link Side　Start"　　：0000 •"PLC Side　Dev. Name"：W •"PLC Side　Start"　　：1100

* Make sure to set "0000" for Start of Link Side.

* Change the Points of Link Side and Dev. Name and Start of PLC Side according to the system.

　They must be the same as for "M_F_RWr" and "M_F_RWw" devices of the global label setting.

	Link Side					PLC Side			
	Dev. Name	Points	Start	End		Dev. Name	Points	Start	End
Transfer SB	SB	512	0000	01FF	↔	SB	512	0000	01FF
Transfer SW	SW	512	0000	01FF	↔	SW	512	0000	01FF
Transfer 1	RX	32	0000	001F	↔	M	32	1024	1055
Transfer 2	RY	32	0000	001F	↔	M	32	2048	2079
Transfer 3	RWr	20	0000	0013	↔	W	20	001000	001013
Transfer 4	RWw	20	0000	0013	↔	W	20	001100	001113
Transfer 5					↔				
Transfer 6					↔				
Transfer 7					↔				
Transfer 8					↔				

Assignment Method
- Points/Start
- Start/End

* Set 0000 for the start address of Link Side.

Default   Check   End   Cancel

MELSOFT Library

1.5. Setting Global Labels

Global labels must be set before using this FB. This section explains global label settings.

(1) M_F_RWr   Set remote input (RWr).

Item	Description
Class	Select "VAR_GLOBAL".
Label Name	Enter "M_F_RWr"
Data Type	Select "Word [Signed]".
Device	Enter the refresh device set for the refresh parameter with a "Z7" prefix.

(2) M_F_RWw   Set remote output (RWw).

Item	Description
Class	Select "VAR_GLOBAL".
Label Name	Enter "M_F_RWw".
Data Type	Select "Word [Signed]".
Device	Enter the refresh device set for the refresh parameter with a "Z6" prefix.

	Class	Label Name	Data Type		Constant	Device	Comment
1	VAR_GLOBAL	M_F_RWr	Word[Signed]	...		W1000Z7	RWr refresh device
2	VAR_GLOBAL	M_F_RWw	Word[Signed]	...		W1100Z6	RWw refresh device
3				...			
4				...			
5				...			
6							

1.6. Creating Interlock Program

Interlock programs must be created for the FBs. The following is an example of an interlock program.

Set an interlock program for cyclic transmission.

(Set a corresponding FB between MC and MCR instructions.)

1.6.1. Cyclic Transmission Program

Use link special relay (SB) and link special register (SW) to create an interlock for cyclic transmission program.

•Own station data link status (SB0049)

•Each station data link status (SW00B0 to SW00B7)

Example: Interlock example (station No.1)
*1 All the FBs in this manual use the cyclic transmission.

1.7.　Relevant Manuals

CC-Link IE Field Network Remote I/O Module User's Manual

MELSEC-Q CC-Link IE Field Network Master/Local Module User's Manual

MELSEC-L CC-Link IE Field Network Master/Local Module User's Manual

QCPU User's Manual (Hardware Design, Maintenance and Inspection)

MELSEC-L CPU Module User's Manual (Hardware Design, Maintenance and Inspection)

GX Works2 Version 1 Operating Manual (Common)

GX Works2 Version 1 Operating Manual (Simple Project, Function Block)

1.8.　Note

Please make sure to read user's manuals for the corresponding products before using the products.

2. Details of the FB Library

2.1. M+NZ2GF2B132_InitialProcessing (Initial processing)

FB Name

M+NZ2GF2B132_InitialProcessing

Function Overview

Item	Description
Function overview	Performs the initial processing after power-on.
Symbol	
Applicable hardware and software	**CC-Link IE Field Network remote I/O module** NZ2GF2B1-32D, NZ2GF2B1-32T, NZ2GF2B1-32TE, NZ2GF2B1-32DT, NZ2GF2B1-32DTE
	CC-Link IE Field Network module CC-Link IE Field Network master/local module *1 *1 The first five digits of the serial number are "14102" or later.
	CPU module
	Engineering software

Symbol diagram contents:

Execution command ——  B : FB_EN            FB_ENO : B —— Execution status
Module start XY address —— W : i_Start_IO_No    FB_OK : B —— Completed w ithout error
Station No. —— W : i_Station_No        FB_ERROR : B —— Error flag
                                        ERROR_ID : W —— Error code
```

CPU module:

Series	Model
MELSEC-Q Series *1	Universal model QCPU *2
MELSEC-L Series	LCPU *3

*1 Not applicable to QCPU (A mode)

*2 The first five digits of the serial number are "12012" or later.

*3 The first five digits of the serial number are "13012" or later.

Engineering software: GX Works2 *1

Language	Software version
Japanese version	Version1.86Q or later
English version	Version1.24A or later
Chinese (Simplified) version	Version1.49B or later
Chinese (Traditional) version	Version1.49B or later
Korean version	Version1.49B or later

*1 For software versions applicable to the modules used, refer to "Relevant manuals".

Item	Description
Programming language	Ladder
Number of steps	449 steps (for MELSEC-Q series universal model CPU) * The number of steps of the FB in a program depends on the CPU model that is used and input and output definition.
Function description	1) By turning ON FB_EN (Execution command), the initial processing after power-on is executed. 2) FB operation is one-shot only, triggered by the FB_EN signal. 3) After FB_EN (Execution command) is turned ON, the FB is completed in multiple scans. 4) When the network configuration setting of the station number specified by i_Station_No (Station No.) is incorrect, FB_ERROR (Error flag) turns ON and processing is interrupted, and the error code 50 (decimal) is stored in ERROR_ID (Error code). Refer to the error code explanation section for details. 5) When the setting value of i_Station_No (Station No.) is out of range, the FB_ERROR output turns ON and processing is interrupted, and the error code 60 (decimal) is stored in ERROR_ID (Error code). Refer to the error code explanation section for details.
Compiling method	Macro type

Item	Description
Restrictions and precautions	1) The FB does not include error recovery processing. Program the error recovery processing separately in accordance with the required system operation. 2) The FB cannot be used in an interrupt program. 3) Please ensure that the FB_EN signal is capable of being turned OFF by the program. Do not use this FB in programs that are only executed once such as a subroutine, FOR-NEXT loop because it is impossible to turn OFF. 4) This FB uses index registers Z6 to Z9. Please do not use these index registers in an interrupt program. 5) A duplicated coil warning may occur during compile operation due to the RY signal being operated by index modification in the FB. However this is not a problem and the FB will operate without error. 6) Every input must be provided with a value for proper FB operation. 7) This FB uses cyclic transmission. Therefore, an interlock program for cyclic transmission is required. For the interlock program, refer to Section "1.6.1 Cyclic Transmission Program". 8) Set the refresh parameters of the network parameter setting according to Section "1.4 Setting the CC-Link IE Field Network Master/Local Module". 9) Set the global label setting according to Section "1.5 Setting Global Labels". 10) Only one master/local module can be controlled by the CC-Link IE Field system FB. To control 2 or more master/local modules by the FB, refer to "Appendix 1. When Using the FB for 2 or More Master/Local Modules". 11) If the processing of this FB is not completed, check if the station number of CC-Link IE Field matches the station number of the network.
FB operation type	Pulsed execution (multiple scan execution type)
Application example	Refer to "Appendix 2. - FB Library Application Examples".
Timing chart	[When operation completes without error] [When an error occurs] FB_EN (Execution command) FB_ENO (Execution status) FB_OK (Completed without error) RWrm+0 bit8 (Initial processing request flag) RWwm+0 bit8 (Initial processing completion flag) RWwm+0 bit11 (Remote READY) FB_ERROR (Error flag) ERROR_ID (Error code) 0 m: Address allocated to the master module by setting the station number FB_EN (Execution command) FB_ENO (Execution status) FB_OK (Completed without error) RWrm+0 bit8 (Initial processing request flag) RWwm+0 bit8 (Initial processing completion flag) RWwm+0 bit11 (Remote READY) FB_ERROR (Error flag) ERROR_ID (Error code) Error code m: Address allocated to the master module by setting the station number

Error codes

●Error code list

Error code	Description	Action
50 (Decimal)	The network configuration setting of the station number specified by i_Station_No is incorrect.	Review the following setting. •Network configuration setting Refer to (2) in Section 1.4 Setting the CC-Link IE Field Network Master/Local Module •The value entered in i_Station_No
60 (Decimal)	The specified station number is not valid. The station number is not within the range of 1 to 120.	Please try again after confirming the setting.

Labels

●Input labels

Name (Comment)	Label name	Data type	Setting range	Description
Execution command	FB_EN	Bit	ON, OFF	ON: The FB is activated. OFF: The FB is not activated.
Module start XY address	i_Start_IO_No	Word	Depends on the I/O point range of the CPU. For details, refer to the CPU user's manual.	Specify the starting XY address (in hexadecimal) where the CC-Link IE Field Network master/local module is mounted. (For example, enter H10 for X10.)
Station No.	i_Station_No	Word	1 to 120	Specify the target station number.

●Output labels

Name (Comment)	Label name	Data type	Initial value	Description
Execution status	FB_ENO	Bit	OFF	ON: Execution command is ON. OFF: Execution command is OFF.
Completed without error	FB_OK	Bit	OFF	When ON, it indicates that the initial processing is completed.
Error flag	FB_ERROR	Bit	OFF	When ON, it indicates that an error has occurred.
Error code	ERROR_ID	Word	0	FB error code output.

		*1 For software versions applicable to the modules used, refer to "Relevant Manuals".	

Item	Description
Programming language	Ladder
Number of steps	575 steps (for MELSEC-Q series universal model CPU) * The number of steps of the FB in a program depends on the CPU model that is used and input and output definition.
Function description	1) By turning ON FB_EN (Execution command), the error status and warning status in the target module is monitored. 2) When an error occurs, o_UNIT_ERROR (Module error detection) is turned ON and the error code is stored in o_UNIT_ERR_CODE (Module error code). 3) When a warning occurs, o_UNIT_WARNING (Module warning detection) is turned ON and the warning code is stored in o_UNIT_WAR_CODE (Module warning code). 4) When an alarm occurs, the alarm code is stored in o_UNIT_WAR_CODE (Module warning code). 5) After FB_EN (Execution command) is turned ON, error clear is performed when i_ErrorReset (Error clear request) is turned ON during error occurrence. A warning is cleared automatically five seconds after the cause of the minor error in the module is removed. 6) When the network configuration setting of the station number specified by i_Station_No (Station No.) is incorrect, FB_ERROR (Error flag) turns ON and processing is interrupted, and the error code 50 (decimal) is stored in ERROR_ID (Error code). Refer to the error code explanation section for details. 7) When the setting value of i_Station_No (Station No.) is out of range, the FB_ERROR output turns ON and processing is interrupted, and the error code 60 (decimal) is stored in ERROR_ID (Error code). Refer to the error code explanation section for details.
Compiling method	Macro type

Item	Description
Restrictions and precautions	1) The FB does not include error recovery processing. Program the error recovery processing separately in accordance with the required system operation.
	2) The FB cannot be used in an interrupt program.
	3) Please ensure that the FB_EN signal is capable of being turned OFF by the program. Do not use this FB in programs that are only executed once such as a subroutine, FOR-NEXT loop because it is impossible to turn OFF.
	4) This FB uses index registers Z6 to Z9. Please do not use these index registers in an interrupt program.
	5) A duplicated coil warning may occur during compile operation due to the RY signal being operated by index modification in the FB. However this is not a problem and the FB will operate without error.
	6) Every input must be provided with a value for proper FB operation.
	7) This FB uses cyclic transmission. Therefore, an interlock program for cyclic transmission is required. For the interlock program, refer to Section "1.6.1 Cyclic Transmission Program".
	8) Set the refresh parameters of the network parameter setting according to Section "1.4 Setting the CC-Link IE Field Network Master/Local Module".
	9) Set the global label setting according to Section "1.5 Setting Global Labels".
	10) Only one master/local module can be controlled by the CC-Link IE Field system FB. To control 2 or more master/local modules by the FB, refer to "Appendix 1. When Using the FB for 2 or More Master/Local Modules".
	11) If the processing of this FB is not completed, check if the station number of CC-Link IE Field matches the station number of the network. Also, confirm that the causes of the error, warning and alarm have been removed.
FB operation type	Real-time execution
Application example	Refer to "Appendix 2. - FB Library Application Examples".

Item	Description
Timing chart	[When operation completes without error] [When an error occurs] * Five seconds after the cause of the minor error is eliminated, "module warning detection" and "module warning code" are automatically cleared.

Error codes

●Error code list

Error code	Description	Action

50 (Decimal)	The network configuration setting of the station number specified by i_Station_No is incorrect.	Review the following setting.
		•Network configuration setting
		  Refer to (2) in Section 1.4 Setting the
		  CC-Link IE Field Network Master/Local
		  Module.
		•The value entered in i_Station_No

60 (Decimal)	The specified station number is not valid. The station number is not within the range of 1 to 120.	Please try again after confirming the setting.

Labels

●Input labels

Name (Comment)	Label name	Data type	Setting range	Description
Execution command	FB_EN	Bit	ON, OFF	ON: The FB is activated. OFF: The FB is not activated.
Module start XY address	i_Start_IO_No	Word	Depends on the I/O point range of the CPU. For details, refer to the CPU user's manual.	Specify the starting XY address (in hexadecimal) where the CC-Link IE Field Network master/local module is mounted. (For example, enter H10 for X10.)
Station No.	i_Station_No	Word	1 to 120	Specify the target station number.
Error clear request	i_ErrorReset	Bit	ON, OFF	Turn ON when performing error clear. Turn OFF the request when FB_OK (Completed without error) is turned ON.

●Output labels

Name (Comment)	Label name	Data type	Initial value	Description
Execution status	FB_ENO	Bit	OFF	ON: Execution command is ON. OFF: Execution command is OFF.
Completed without error	FB_OK	Bit	OFF	When ON, it indicates error clear is completed.
Module error detection	o_UNIT_ERROR	Bit	OFF	When ON, it indicates an error has occurred.
Module error code	o_UNIT_ERR_CODE	Word	0	Return the error code for an error that occurred in the module.
Module warning detection	o_UNIT_WARNING	Bit	OFF	When ON, it indicates a warning has occurred.
Module warning code	o_UNIT_WAR_CODE	Word	0	Return the warning code for a warning that occurred in the module.

Name (Comment)	Label name	Data type	Initial value	Description
Error flag	FB_ERROR	Bit	OFF	When ON, it indicates that an error has occurred.
Error code	ERROR_ID	Word	0	FB error code output.

FB Version Upgrade History

Version	Date	Description
1.00A	2017/04	First edition

Note

This chapter includes information related to this function block.

It does not include information on restrictions of use such as combination with modules or programmable controller CPUs.

Before using any Mitsubishi products, please read all the relevant manuals.

MELSOFT Library

Appendix 1.　　When Using the FB for 2 or More Master/Local Modules

To use 2 or more CC-Link IE field master/local modules and to use an FB for the second and subsequent CC-Link IE field master/local modules, it is necessary to create an FB for the second and subsequent modules from the MELSOFT Library CC-Link IE field master/local module FB using the following procedure.

Four steps are required to create the FB for the second and subsequent modules.

(1) Enter network parameters

(2) Set global labels

(3) Copy MELSOFT Library to create the FB for the second module

(4) Replace devices to create the FB for the second module

MELSOFT Library

Appendix 1.1.　　Entering Network Parameters

(1) Enter the network parameters for the second module.

Item	Description
Network Type	Select CC IE Field (Master Station).
Start I/O No.	Set the start I/O number of the master/local module in increments of 16 points. Set "0020".
Network No.	Set the network number of the master/local module. Set "2".

*Select this checkbox.

☑ Set network configuration setting in CC IE Field configuration window

	Module 1	Module 2
Network Type	CC IE Field (Master Station)	CC IE Field (Master Station)
Start I/O No.	0000	0020
Network No.	1	2
Total Stations	1	0
Group No.		
Station No.	0	0
Mode	Online (Normal Mode)	Online (Normal Mode)
	CC IE Field Configuration Setting	CC IE Field Configuration Setting
	Network Operation Settings	Network Operation Settings
	Refresh Parameters	Refresh Parameters
	Interrupt Settings	Interrupt Settings
	Specify Station No. by Parameter	Specify Station No. by Parameter

(2) Set the CC IE Field configuration setting for the second module.

Item	Description
Station No.	Set the station number of the intelligent device station connected to the master station. Set "1".
Station Type	Set the station type of the intelligent device station connected to the master station. Set "Intelligent Device Station".
RX/RY Setting	Set assignment for RX/RY for the intelligent device station connected to the master station. (a) Start Set "0000. (b) End Set "001F".
RWw/RWr Setting	Set assignment for RWw/RWr for the intelligent device station connected to the master station. (a) Start Set "0000". (b) End Set "0013".

[When using NZ2GF2B1-32D]

	No.	Model Name	STA#	Station Type	RX/RY Setting			RWw/RWr Setting			Refresh Device
					Points	Start	End	Points	Start	End	RX
	0	Host Station	0	Master Station							
	1	NZ2GF2B1-32D	1	Intelligent Device Station	32	0000	001F	20	0000	0013	

*Set the module to be used according to the environment.

(3) Enter the refresh parameters for the second module.

Item	Description	Setting value
Transfer SB	Select the link refresh range of SB device.	•"Link Side Points" : 512 •"Link Side Start" : 0000 •"PLC Side Dev. Name" : SB •"PLC Side Start" : 0200
Transfer SW	Select the link refresh range of SW device.	•"Link Side Points" : 512 •"Link Side Start" : 0000 •"PLC Side Dev. Name" : SW •"PLC Side Start" : 0200
Transfer 1	Select the link refresh range of RX device.	•"Link Side Dev. Name" : RX •"Link Side Points" : 32 •"Link Side Start" : 0000 •"PLC Side Dev. Name" : M •"PLC Side Start" : 1056
Transfer 2	Select the link refresh range of RY device.	•"Link Side Dev. Name" : RY •"Link Side Points" : 32 •"Link Side Start" : 0000 •"PLC Side Dev. Name" : M •"PLC Side Start" : 2080
Transfer 3	Select the link refresh range of RWr device.	•"Link Side Dev. Name" : RWr •"Link Side Points" : 20 •"Link Side Start" : 0000 •"PLC Side Dev. Name" : W •"PLC Side Start" : 1014
Transfer 4	Select the link refresh range of RWw device.	•"Link Side Dev. Name" : RWw •"Link Side Points" : 20 •"Link Side Start" : 0000 •"PLC Side Dev. Name" : W •"PLC Side Start" : 1114

* Change the Points of Link Side and Dev. Name and Start of PLC Side according to the system.

Assignment Method
- ● Points/Start
- ○ Start/End

	Link Side					PLC Side				
	Dev. Name	Points	Start	End	↔	Dev. Name	Points	Start	End	
Transfer SB	SB	512	0000	01FF	↔	SB	512	0200	03FF	
Transfer SW	SW	512	0000	01FF	↔	SW	512	0200	03FF	
Transfer 1	RX	32	0000	001F	↔	M	32	1056	1087	
Transfer 2	RY	32	0000	001F	↔	M	32	2080	2111	
Transfer 3	RWr	20	0000	0013	↔	W	20	001014	001027	
Transfer 4	RWw	20	0000	0013	↔	W	20	001114	001127	
Transfer 5					↔					
Transfer 6					↔					
Transfer 7					↔					
Transfer 8					↔					

Default   Check   End   Cancel

Appendix 1.2.   Entering Global Labels

Enter the global labels for the second module.

Specify label names for the second module. The names must be different from the label names for the first module.

The following explains how to set the global label for the second module.

(1) M_F_RWr2 Set remote register (RWr).

Item	Description
Class	Select "VAR_GLOBAL".
Label Name	Enter "M_F_RWr2".
Data Type	Select "Word [Signed]".
Device	Enter the refresh device set for the refresh parameter with a "Z7" prefix.

(2) M_F_RWw2 Set remote register (RWw).

Item	Description
Class	Select "VAR_GLOBAL".
Label Name	Enter "M_F_RWw2".
Data Type	Select "Word [Signed]".
Device	Enter the refresh device set for the refresh parameter with a "Z6" prefix.

	Class		Label Name	Data Type		Constant	Device	Comment
1	VAR_GLOBAL	▼	M_F_RWr	Word[Signed]	...		W1000Z7	RWr refresh device
2	VAR_GLOBAL	▼	M_F_RWw	Word[Signed]			W1100Z6	RWw refresh device
3	VAR_GLOBAL	▼	M_F_RWr2	Word[Signed]	...		W1014Z7	RWr refresh device
4	VAR_GLOBAL	▼	M_F_RWw2	Word[Signed]	...		W1114Z6	RWw refresh device
5		▼			...			
6		▼						

MELSOFT Library

Appendix 1.3.   Copying MELSOFT Library to Create an FB for the Second Module

(1) Select an FB necessary for the second module from the Project tab of the Navigation window. Execute the Copy command.
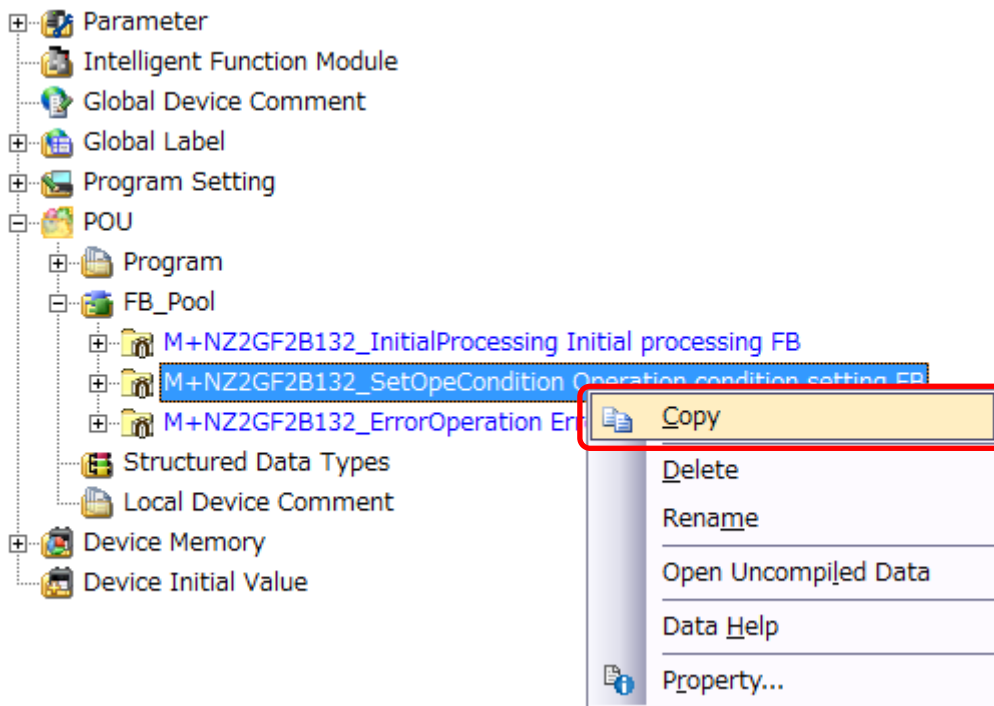

(2) Paste the copied FB to "FB_Pool" on the Project tab of the Navigation window.

MELSOFT Library
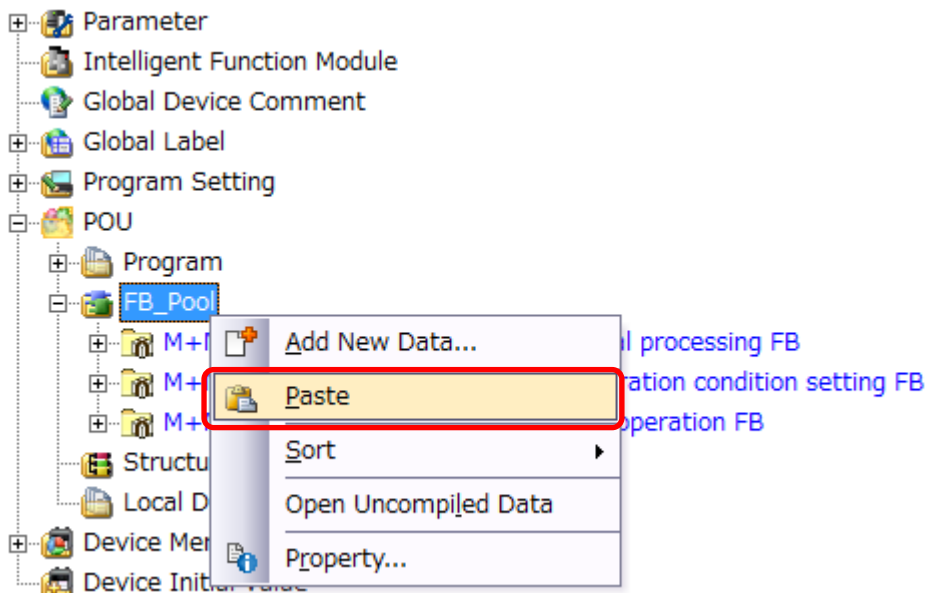

(3) After selecting the paste command, a window appears to enter an FB name. Enter an FB name after paste.

(Example: NZ2GF2B132_SetOpeCondition_2)

[Note] The character string "+" of M+··· cannot be entered.

Data Paste

Data Type: Function Block

Copy Source Data Name

M+NZ2GF2B132_SetOpeCondition

Data Name After Paste

NZ2GF2B132_SetOpeCondition_2

OK

Cancel

NZ2GF2B132_SetOpeCondition_2 Operation condition setting FB

Appendix 1.4.   Replacing Devices to Create the FB for the Second Module

(1) Open "Program" of the added FB.
(2) Select "Find/Replace" menu and then select "Replace Device". "Find/Replace" window appears.

MELSOFT Library
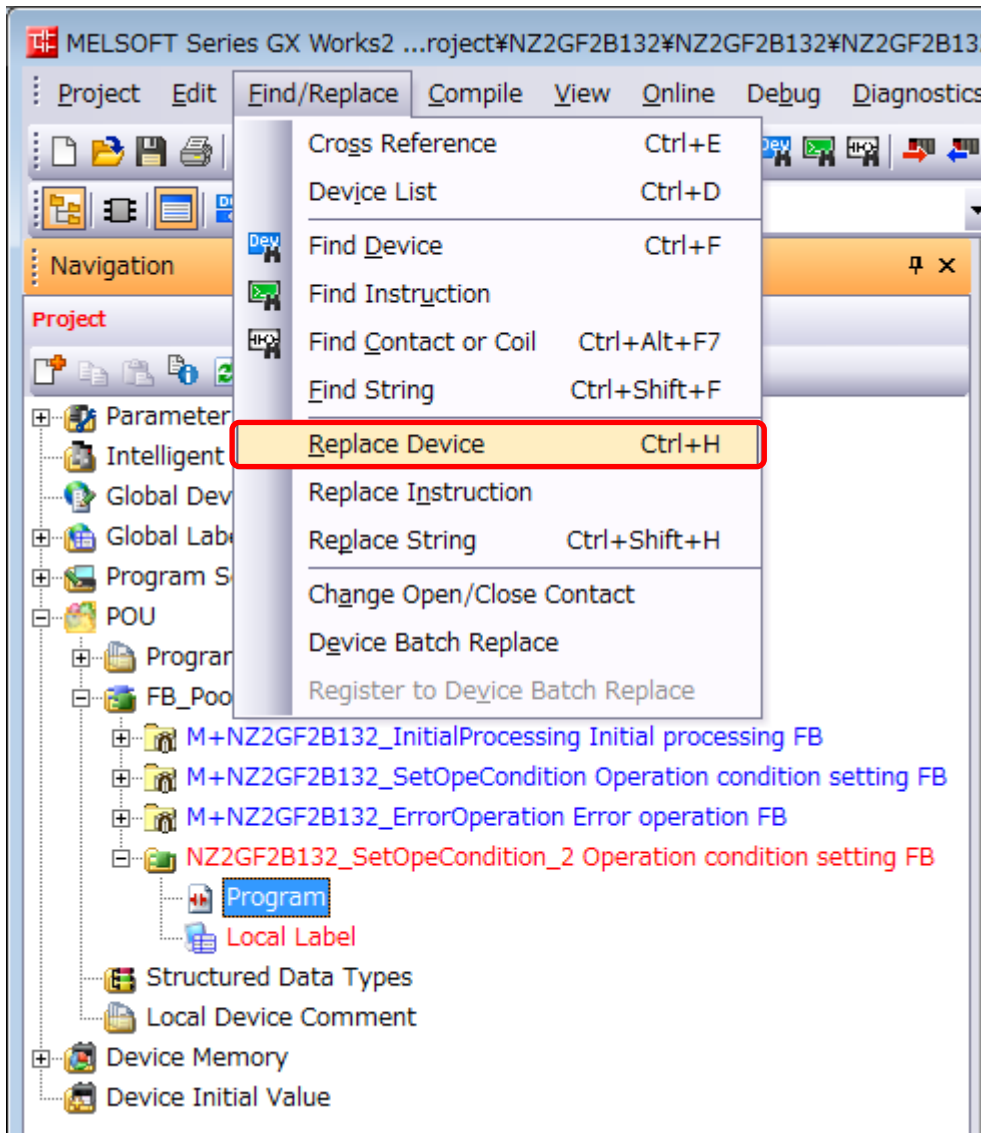

(3) Select "Current Window" from Find In, "M_F_RWr" from Find Device, and "M_F_RWr2" from Replace Device.
   Then replace all devices. In the same way, replace "M_F_RWw" all at once.
By performing the steps above, the CC-Link IE field master/local FB can be used for the second module.

[Point]
(1) To use multiple FBs for the second CC-Link IE field master/local module, repeat "Appendix 1.   When Using the FB
   for 2 or More Master/Local Modules".
(2) To use an FB for third or subsequent CC-Link IE field master/local modules, make sure that the "Global label name",
   "Data Name After Paste" that is set when pasting FB data and "Replace Device" that is set when replacing devices
   are not duplicated for the first and second modules.

[Note]
If MELSOFT Library is upgraded, MELSOFT Library FBs can be upgraded by importing them again. However, the
FBs that were created by following these procedures for the second and subsequent modules are not upgraded even
if the FBs are imported again.
Therefore, to upgrade FBs that were created by following these procedures, after upgrading MELSOFT Library,
follow these procedures again.

MELSOFT Library

Appendix 2.　　FB Library Application Examples

The application examples of the CC-Link IE Field Network remote I/O module FB are as follows.

1) System configuration

(1) Q series system configuration

Master/local module (QJ71GF11-T2)

CPU module (QCPU)

Power supply module

I/O module
(NZ2GF2B1-32D, NZ2GF2B1-32T, NZ2GF2B1-32TE,
NZ2GF2B1-32DT, NZ2GF2B1-32DTE)

Master station
(Station No.0)

X/Y00
to
X/Y1F

Intelligent device station
(Station No.1)

Ethernet cable (1000BASE-T)

(2) L series system configuration

END cover (L6EC)

Master/local module (LJ71GF11-T2)

CPU module (LCPU)

Power supply module

I/O module
(NZ2GF2B1-32D, NZ2GF2B1-32T, NZ2GF2B1-32TE,
NZ2GF2B1-32DT, NZ2GF2B1-32DTE)

Master station
(Station No.0)

X/Y00
to
X/Y1F

Intelligent device station
(Station No.1)

Ethernet cable (1000BASE-T)

MELSOFT Library

Reminder

• Every input must be provided with a value for proper FB operation.

  If not set, the values will be unspecified.

• Abbreviations may be used in the label comments due to the limitation on the number of the characters to display in
  GX Works2.

Interlock program

* The following is an example of an interlock program.

*1 All the FBs in this manual use the cyclic transmission.

2) List of devices

a) External input (commands)

Device	FB name	Application (ON details)
M0	M+NZ2GF2B132_InitialProcessing	Initial processing request
M10	M+NZ2GF2B132_SetOpeCondition	Operation condition setting request
M20	M+NZ2GF2B132_ErrorOperation	Error operation request
M21		Error clear request

b) External output (checks)

| Device	FB name	Application (ON details)
M1	M+NZ2GF2B132_InitialProcessing	Initial processing FB ready
M2		Initial processing FB complete
F0		Initial processing FB error
D0		Initial processing FB error code
M11	M+NZ2GF2B132_SetOpeCondition	Operation condition setting FB ready
M12		Operation condition setting FB complete
F5		Operation condition setting FB error
D10		Operation condition setting FB error code
M22	M+NZ2GF2B132_ErrorOperation	Error operation FB ready
M23		Error operation FB complete
M24		Module error detection
D20		Module error code
M25		Module warning detection
D21		Module warning code
F10		Error operation FB error
D22		Error operation FB error code

3) Global label setting

a) Common setting

Class	Label name	Data type	Device
VAR_GLOBAL	M_F_RWr	Word [Signed]	W1000Z7
VAR_GLOBAL	M_F_RWw	Word [Signed]	W1100Z6

M+NZ2GF2B132_InitialProcessing (Initial processing)

The example below shows a program with the following conditions.

Label name	Setting value	Description
i_Start_IO_No	H0	Set the starting XY address where the CC-Link IE Field Network master/local module is mounted to 0H.
i_Station_No	K1	Set the target station number to 1.

By turning ON M0, the initial processing is performed.

M+NZ2GF2B132_SetOpeCondition (Operation condition setting)

The example below shows a program with the following conditions.

Label name	Setting value	Description
i_Start_IO_No	H0	Set the starting XY address where the CC-Link IE Field Network master/local module is mounted to 0H.
i_Station_No	K1	Set the target station number to 1.

By turning ON M10, the operation condition of the module is set.
M+NZ2GF2B132_ErrorOperation (Error operation)

The example below shows a program with the following conditions.

Label name	Setting value	Description
i_Start_IO_No	H0	Set the starting XY address where the CC-Link IE Field Network master/local module is mounted to 0H.
i_Station_No	K1	Set the target station number to 1.
i_ErrorReset	ON/OFF	Turn ON when performing error clear.

By turning ON M20, error and warning occurrences are monitored.
After turning ON M20, by turning ON M21, error clear is performed.
