Reference Manual Revision History

Reference Manual Number	Date	Description
FBM-M111-A	2013/08/30	First edition
FBM-M111-B	2015/04/03	1) The following FB libraries have been added. <ul style="list-style-type: none">•M+L60AD2DA2_FreeCalDataStoreDev•M+L60AD2DA2_FreeConvDataStoreCsv•M+L60AD2DA2_FreeConvDataStoreDev 2) Added applicable GX Works2 Version. <ul style="list-style-type: none">•This FB is able to install on GX Works2 of all language versions.

1. Overview

1.1. Overview of the FB Library

This FB Library is for using the MELSEC-L Analog Input/Output Module L60AD2DA2 (hereinafter L60AD2DA2).

1.2. Function of the FB Library

[A/D conversion]

Item	Description
M+L60AD2DA2_AD_ReadADVal	Reads the A/D conversion data of the specified A/D conversion channel (CH1 or CH2).
M+L60AD2DA2_AD_ReadAllADVal	Reads the A/D conversion data of the A/D conversion channels (CH1 and CH2).
M+L60AD2DA2_AD_ReadScalingVal	Reads the scaling value of the specified A/D conversion channel (CH1 or CH2).
M+L60AD2DA2_AD_ReadAllScalingVal	Reads the scaling values of the A/D conversion channels (CH1 and CH2).
M+L60AD2DA2_AD_SetADConversion	Enables or disables the A/D conversion for the specified A/D conversion channel (CH1 or CH2) or all the A/D conversion channels (CH1 and CH2).
M+L60AD2DA2_AD_SetAverage	Sets the averaging processing of the specified A/D conversion channel (CH1 or CH2).
M+L60AD2DA2_AD_SetScaling	Sets the scaling of the specified A/D conversion channel (CH1 or CH2).
M+L60AD2DA2_AD_SetInputSignalErr	Sets the input signal error detection of the specified A/D conversion channel (CH1 or CH2).
M+L60AD2DA2_AD_SetOffsetVal	Sets the offset of the specified A/D conversion channel (CH1 or CH2).
M+L60AD2DA2_AD_SetGainVal	Sets the gain of the specified A/D conversion channel (CH1 or CH2).
M+L60AD2DA2_AD_ShiftOperation	Adds the conversion value shift amount to the digital value.
M+L60AD2DA2_AD_DiffOperation	Outputs the remaining value after subtraction of the reference value from the digital value.
M+L60AD2DA2_AD_ClipOperation	Limits the digital value with the upper and lower limit values of the digital clipping.
M+L60AD2DA2_AD_SetLoggingPARAM	Sets the logging function of the specified A/D conversion channel (CH1 or CH2).
M+L60AD2DA2_AD_SaveLogging	Saves the logging data to a file.

[D/A conversion]

Item	Description
M+L60AD2DA2_DA_WriteDAVal	Writes the D/A conversion data of the specified D/A conversion channel (CH3 or CH4).
M+L60AD2DA2_DA_WriteAllDAVal	Writes the D/A conversion data of the D/A conversion channels (CH3 and CH4).
M+L60AD2DA2_DA_SetDAConversion	Enables or disables the D/A conversion for the D/A conversion specified channel (CH3 or CH4) or all the D/A conversion channels (CH3 and CH4).
M+L60AD2DA2_DA_SetDAOutput	Enables or disables the D/A output of the specified D/A conversion channel (CH3 or CH4) or all the D/A conversion channels (CH3 and CH4).
M+L60AD2DA2_DA_SetScaling	Sets the scaling of the specified D/A conversion channel (CH3 or CH4).
M+L60AD2DA2_DA_SetAlarm	Sets the alert output of the specified D/A conversion channel (CH3 or CH4).
M+L60AD2DA2_DA_SetOffsetVal	Sets the offset of the specified D/A conversion channel (CH3 or CH4).
M+L60AD2DA2_DA_SetGainVal	Sets the gain of the specified D/A conversion channel (CH3 or CH4).
M+L60AD2DA2_DA_ShiftOperation	Adds the input value shift amount to the digital value.
M+L60AD2DA2_DA_WaveDataStoreCsv	Reads data from the CSV file where parameters and wave data (wave data and wave data points) of the wave output function are stored, then writes them to the buffer memory of the L60AD2DA2.
M+L60AD2DA2_DA_WaveDataStoreDev	Reads data from the file register (ZR) where parameters and wave data (wave data and wave data points) of the wave output function are stored, then writes them to the buffer memory of the L60AD2DA2.
M+L60AD2DA2_DA_WaveOutputSetting	Sets the wave output of the specified D/A conversion channel (CH3 or CH4) or all the D/A conversion channels (CH3 and CH4).
M+L60AD2DA2_DA_WaveOutReqSetting	Sets the starting, stopping, or pausing of the wave output of the specified D/A conversion channel (CH3 or CH4) or all the D/A conversion channels (CH3 and CH4).

[Common]

Item	Description
M+L60AD2DA2_ReadADVal_WriteDAVal	Reads the A/D conversion data of the A/D conversion channels (CH1 and CH2) and writes the D/A conversion data of the D/A conversion channels (CH3 and CH4).
M+L60AD2DA2_RequestSetting	Validates each setting.
M+L60AD2DA2_ErrorOperation	Monitors error codes and resets errors.
M+L60AD2DA2_OGBackup	Reads the offset/gain setting value of the user range setting and stores it to a file.
M+L60AD2DA2_OGRestore	Restores the offset/gain setting values of the user range setting that are saved in a file to the module.
M+L60AD2DA2_FreeCalDataStoreDev	Reads calculation expression data of the free calculation function from the file register (ZR), and then writes them to the buffer memory of the L60AD2DA2.
M+L60AD2DA2_FreeConvDataStoreCsv	Reads the parameters and free conversion characteristics table of the free conversion characteristics function from the CSV file, and then writes them to the buffer memory of the L60AD2DA2.
M+L60AD2DA2_FreeConvDataStoreDev	Reads the parameters and free conversion characteristics table of the free conversion characteristics function from the file register (ZR), and then writes them to the buffer memory of the L60AD2DA2.

Item	Description
Function description	<ol style="list-style-type: none"> 1) By turning ON FB_EN (Execution command), the A/D conversion data of the specified A/D conversion channel (CH1 or CH2) is read. 2) The read A/D conversion data depends on the settings of the input range and the averaging processing function. 3) When the A/D conversion completed flag (XnE) is OFF, the A/D conversion data of the specified channel is not read. 4) When the setting value of the target channel is out of range, the FB_ERROR output turns ON and processing is interrupted, and the error code 10 (Decimal) is stored in ERROR_ID (Error code). Refer to the error code explanation section for details. 5) When the digital output value is set in the auto refresh setting of the intelligent function module, this FB is unnecessary.
Compiling method	Macro type
Restrictions and precautions	<ol style="list-style-type: none"> 1) The FB does not include error recovery processing. Program the error recovery processing separately in accordance with the required system operation. 2) The FB cannot be used in an interrupt program. 3) Please ensure that the FB_EN signal is capable of being turned OFF by the program. Do not use this FB in programs that are only executed once such as a subroutine, FOR-NEXT loop because it is impossible to turn OFF. 4) When two or more of these FBs are used, precaution must be taken to avoid repetition of the target channel. 5) This FB uses index registers Z7 to Z9. Please do not use these index registers in an interrupt program. 6) Every input must be provided with a value for proper FB operation 7) To operate the L60AD2DA2, set the I/O range according to the device and system to be connected. Configure the setting in Switch Setting of GX Works2 according to the application. For details on how to use the intelligent function module switch setting, refer to GX Works2 Version 1 Operating Manual (Common).
FB operation type	Real-time execution
Application example	Refer to "Appendix 1. FB Library Application Examples".

Item	Description
Timing chart	<div style="display: flex; justify-content: space-around;"> <div style="width: 45%;"> <p>[When operation completes without error]</p> </div> <div style="width: 45%;"> <p>[When an error occurs]</p> </div> </div>

Error codes

● Error code list

Error code	Description	Action
10 (Decimal)	The specified channel is not valid. The target channel is not within the range of 1 or 2.	Please try again after confirming the setting.

Labels

●Input labels

Name (Comment)	Label name	Data type	Setting range	Description
Execution command	FB_EN	Bit	ON, OFF	ON: The FB is activated. OFF: The FB is not activated.
Module start XY address	i_Start_IO_No	Word	Depends on the I/O point range of the CPU. For details, refer to the CPU user's manual.	Specify the start XY address (in hexadecimal) where the L60AD2DA2 is connected. (For example, enter H10 for X10.)
Target CH	i_CH	Word	1, 2	Specify the channel number.

●Output labels

Name (Comment)	Label name	Data type	Initial value	Description
Execution status	FB_ENO	Bit	OFF	ON: Execution command is ON. OFF: Execution command is OFF.
Completed without error	FB_OK	Bit	OFF	When ON, it indicates that the A/D conversion value is being read.
A/D conversion data	o_AD_Value	Word	0	The A/D conversion value is stored.
Error flag	FB_ERROR	Bit	OFF	When ON, it indicates that an error has occurred.
Error code	ERROR_ID	Word	0	FB error code output.

FB Version Upgrade History

Version	Date	Description
1.00A	2013/08/30	First edition

Note

This chapter includes information related to the function block.

It does not include information on restrictions of use such as combination with modules or programmable controller CPUs.

Please make sure to read user's manuals for the corresponding products before using the products.

2.1.2. M+L60AD2DA2_AD_ReadAllADVal (Read A/D conversion data (all CHs))

FB Name

M+L60AD2DA2_AD_ReadAllADVal

Function Overview

Item	Description																									
Function overview	Reads the A/D conversion data of the A/D conversion channels (CH1 and CH2).

Please do not use these index registers in an interrupt program. 5) Every input must be provided with a value for proper FB operation 6) To operate the L60AD2DA2, set the I/O range according to the device and system to be connected. Configure the setting in Switch Setting of GX Works2 according to the application. For details on how to use the intelligent function module switch setting, refer to GX Works2 Version 1 Operating Manual (Common).
FB operation type	Real-time execution
Application example	Refer to "Appendix 1. FB Library Application Examples".
Timing chart	<p>[When operation completes without error]</p> <p>The timing chart illustrates the sequence of events for the FB when it completes an A/D conversion without error. It shows the following signals and their states over time:</p> <ul style="list-style-type: none"> FB_EN (Execution command): A pulse that starts the conversion process. FB_ENO (Execution status): A signal that becomes active (high) when the conversion starts and returns to inactive (low) when it completes. o_AD_Value_CH (CH A/D conversion data): The data is updated during the conversion. The chart shows the data being 'Update stopped' before and after the 'During update' period. FB_OK (Completed without error): A pulse that occurs immediately after the conversion is finished. FB_ERROR (Error flag): Remains at a low level, indicating no error occurred. ERROR_ID (Error code): Remains at 0, indicating no error.

Error codes

●Error code list

Error code	Description	Action
None	None	None

Labels

●Input labels

Name (Comment)	Label name	Data type	Setting range	Description
Execution command	FB_EN	Bit	ON, OFF	ON: The FB is activated. OFF: The FB is not activated.
Module start XY address	i_Start_IO_No	Word	Depends on the I/O point range of the CPU. For details, refer to the CPU user's manual.	Specify the start XY address (in hexadecimal) where the L6AD2DA2 is connected. (For example, enter H10 for X10.)

●Output labels

Name (Comment)	Label name	Data type	Initial value	Description
Execution status	FB_ENO	Bit	OFF	ON: Execution command is ON. OFF: Execution command is OFF.
Completed without error	FB_OK	Bit	OFF	When ON, it indicates that the A/D conversion value is being read.
CH1 A/D conversion data	o_AD_Value_CH1	Word	0	The A/D conversion value of channel 1 is stored.
CH2 A/D conversion data	o_AD_Value_CH2	Word	0	The A/D conversion value of channel 2 is stored.
Error flag	FB_ERROR	Bit	OFF	When ON, it indicates that an error has occurred.
Error code	ERROR_ID	Word	0	FB error code output.

Error codes

● Error code list

Error code	Description	Action
10 (Decimal)	The specified channel is not valid. The target channel is not within the range of 1 or 2.	Please try again after confirming the setting.

Labels

●Input labels

Name (Comment)	Label name	Data type	Setting range	Description
Execution command	FB_EN	Bit	ON, OFF	ON: The FB is activated. OFF: The FB is not activated.
Module start XY address	i_Start_IO_No	Word	Depends on the I/O point range of the CPU. For details, refer to the CPU user's manual.	Specify the start XY address (in hexadecimal) where the L60AD2DA2 is connected. (For example, enter H10 for X10.)
Target CH	i_CH	Word	1, 2	Specify the channel number.

●Output labels

Name (Comment)	Label name	Data type	Initial value	Description
Execution status	FB_ENO	Bit	OFF	ON: Execution command is ON. OFF: Execution command is OFF.
Completed without error	FB_OK	Bit	OFF	When ON, it indicates that the scaling value is being read.
Scaling value	o_Scaling_Value	Word	0	The scaling value is stored.
Error flag	FB_ERROR	Bit	OFF	When ON, it indicates that an error has occurred.
Error code	ERROR_ID	Word	0	FB error code output.

FB operation type	Real-time execution
Application example	Refer to "Appendix 1. FB Library Application Examples".
Timing chart	<p>[When operation completes without error]</p>  <p>The timing chart illustrates the sequence of events during an update cycle. It features six horizontal signal lines: FB_EN (Execution command), FB_ENO (Execution status), o_Scaling_CH (Scaling value), FB_OK (Completed without error), FB_ERROR (Error flag), and ERROR_ID (Error code). The FB_EN signal transitions from low to high, initiating the update. The FB_ENO signal transitions from low to high during the update. The o_Scaling_CH signal shows a period of 'Update stopped' followed by 'During update' and another 'Update stopped' period. The FB_OK signal transitions from low to high at the end of the update cycle. The FB_ERROR and ERROR_ID signals remain at their initial low state throughout the cycle.</p>

Error codes

● Error code list

Error code	Description	Action
10 (Decimal)	The specified channel is not valid. The target channel is not within the range of 1 or 2.	Please try again after confirming the setting.
11 (Decimal)	The specified averaging processing type is not valid. The averaging processing type is not set within the range of 0 to 3H.	Please try again after confirming the setting.

Labels

●Input labels

Name (Comment)	Label name	Data type	Setting range	Description
Execution command	FB_EN	Bit	ON, OFF	ON: The FB is activated. OFF: The FB is not activated.
Module start XY address	i_Start_IO_No	Word	Depends on the I/O point range of the CPU. For details, refer to the CPU user's manual.	Specify the start XY address (in hexadecimal) where the L60AD2DA2 is connected. (For example, enter H10 for X10.)
Target CH	i_CH	Word	1, 2	Specify the channel number.
Averaging process setting	i_Average_Type	Word	0H: Sampling processing 1H: Time average 2H: Count average 3H: Moving average	Specify the averaging processing type.
Time average/Count average/Moving average	i_Average_Times	Word	Time average 2 to 5000 (ms) Count average 4 to 65000 (times) Moving average 2 to 1000 (times)	Set the time average, count average, and moving average of the channel specified for the averaging processing.

●Output labels

Name (Comment)	Label name	Data type	Initial value	Description
Execution status	FB_ENO	Bit	OFF	ON: Execution command is ON. OFF: Execution command is OFF.
Completed without error	FB_OK	Bit	OFF	When ON, it indicates that the averaging processing is completed.
Error flag	FB_ERROR	Bit	OFF	When ON, it indicates that an error has occurred.
Error code	ERROR_ID	Word	0	FB error code output.

FB Version Upgrade History

Error codes

● Error code list

Error code	Description	Action
10 (Decimal)	The specified channel is not valid. The target channel is not within the range of 1 or 2.	Please try again after confirming the setting.
11 (Decimal)	The input signal error detection setting is not valid. The input signal error detection setting is not within the range of 0 to 4.	Please try again after confirming the setting.

Labels

●Input labels

Name (Comment)	Label name	Data type	Setting range	Description
Execution command	FB_EN	Bit	ON, OFF	ON: The FB is activated. OFF: The FB is not activated.
Module start XY address	i_Start_IO_No	Word	Depends on the I/O point range of the CPU. For details, refer to the CPU user's manual.	Specify the start XY address (in hexadecimal) where the L60AD2DA2 is connected. (For example, enter H10 for X10.)
Target CH	i_CH	Word	1, 2	Specify the channel number.
Input signal error detection setting	i_Sig_Err_Type	Word	0H: Disabled 1H: Upper lower limit detection 2H: Lower limit detection 3H: Upper limit detection 4H: Disconnection detection	Set the input signal error detection.
Input signal error detection setting value	i_Sig_Err_Level	Word	0 to 250 (unit: 0.1%)	Specify the input signal error detection setting value.

●Output labels

Name (Comment)	Label name	Data type	Initial value	Description
Execution status	FB_ENO	Bit	OFF	ON: Execution command is ON. OFF: Execution command is OFF.
Completed without error	FB_OK	Bit	OFF	When ON, it indicates that the input signal error detection setting is completed.
Error flag	FB_ERROR	Bit	OFF	When ON, it indicates that an error has occurred.
Error code	ERROR_ID	Word	0	FB error code output.

Number of steps	<p>491 steps (for MELSEC-L series CPU)</p> <p>* The number of steps of the FB in a program depends on the CPU model that is used and input and output definition.</p>																	

Item	Description
Function description	<ol style="list-style-type: none"> 1) By turning ON FB_EN (Execution command), the offset of the specified A/D conversion channel (CH1 or CH2) is set. 2) By turning ON the user range write command while FB_EN (Execution command) is ON, the offset value is written. 3) After FB_EN (Execution command) is turned ON, the execution of this FB continues until the setting of the offset value of the specified channel is completed. 4) When the setting value of the target channel is out of range, the FB_ERROR output turns ON and processing is interrupted, and the error code is stored in ERROR_ID (Error code). Refer to the error code explanation section for details.
Compiling method	Macro type

Item	Description
Restrictions and precautions	<ol style="list-style-type: none"> 1) The FB does not include error recovery processing. Program the error recovery processing separately in accordance with the required system operation. 2) The FB cannot be used in an interrupt program. 3) Please ensure that the FB_EN signal is capable of being turned OFF by the program. Do not use this FB in programs that are only executed once such as a subroutine, FOR-NEXT loop because it is impossible to turn OFF. 4) When the following FBs are used, implement an external interlock to prevent them from being executed simultaneously. Do not use two or more of these FBs simultaneously. If two or more of these FBs are executed simultaneously, the offset/gain is set incorrectly. <ul style="list-style-type: none"> • M+L60AD2DA2_AD_SetOffsetVal • M+L60AD2DA2_AD_SetGainVal • M+L60AD2DA2_DA_SetOffsetVal • M+L60AD2DA2_DA_SetGainVal 5) This FB cannot configure the offset/gain settings of channel 1 and channel 2 simultaneously. To configure the offset/gain settings simultaneously, create a program instead of the use of this FB. 6) This FB uses index registers Z7 to Z9. Please do not use these index registers with an interrupt program. 7) Every input must be provided with a value for proper FB operation. 8) When this FB is used in two or more places, a duplicated coil warning may occur during compile operation due to the Y signal being operated by index modification. However this is not a problem and the FB will operate without error. 9) To operate the L60AD2DA2, set the I/O range according to the device and system to be connected. Configure the setting in Switch Setting of GX Works2 according to the application. For details on how to use the intelligent function module switch setting, refer to GX Works2 Version 1 Operating Manual (Common).
FB operation type	Pulsed execution (multiple scan execution type)
Application example	Refer to "Appendix 1. FB Library Application Examples".

Error codes

●Error code list

Error code	Description	Action
10 (Decimal)	The specified channel is not valid. The target channel is not within the range of 1 or 2.	Please try again after confirming the setting.

Labels

●Input labels

Name (Comment)	Label name	Data type	Setting range	Description
Execution command	FB_EN	Bit	ON, OFF	ON: The FB is activated. OFF: The FB is not activated.
Module start XY address	i_Start_IO_No	Word	Depends on the I/O point range of the CPU. For details, refer to the CPU user's manual.	Specify the start XY address (in hexadecimal) where the L60AD2DA2 is connected. (For example, enter H10 for X10.)
Target CH	i_CH	Word	1, 2	Specify the channel number.
User range write command	i_Write_Offset	Bit	ON, OFF	Turn ON for the adjusted offset value writing to a flash memory. Turn OFF after the writing.

●Output labels

Name (Comment)	Label name	Data type	Initial value	Description
Execution status	FB_ENO	Bit	OFF	ON: Execution command is ON. OFF: Execution command is OFF.
Completed without error	FB_OK	Bit	OFF	When ON, it indicates that the A/D conversion offset setting is completed.
Error flag	FB_ERROR	Bit	OFF	When ON, it indicates that an error has occurred.
Error code	ERROR_ID	Word	0	FB error code output.

Number of steps	474 steps (for MELSEC-L series CPU) * The number of steps of the FB in a program depends on the CPU model that is used and input and output definition.																					

Item	Description
Function description	<ol style="list-style-type: none"> 1) By turning ON FB_EN (Execution command), the gain of the specified A/D conversion channel (CH1 or CH2) is set. 2) By turning ON the user range write command while FB_EN (Execution command) is ON, the gain value is written. 3) After FB_EN (Execution command) is turned ON, the execution of this FB continues until the setting of the gain value of the specified channel is completed. 4) When the setting value of the target channel is out of range, the FB_ERROR output turns ON and processing is interrupted, and the error code is stored in ERROR_ID (Error code). Refer to the error code explanation section for details.
Compiling method	Macro type

Item	Description
Restrictions and precautions	<ol style="list-style-type: none"> 1) The FB does not include error recovery processing. Program the error recovery processing separately in accordance with the required system operation. 2) The FB cannot be used in an interrupt program. 3) Please ensure that the FB_EN signal is capable of being turned OFF by the program. Do not use this FB in programs that are only executed once such as a subroutine, FOR-NEXT loop because it is impossible to turn OFF. 4) When the following FBs are used, implement an external interlock to prevent them from being executed simultaneously. Do not use two or more of these FBs simultaneously. If two or more of these FBs are executed simultaneously, the offset/gain is set incorrectly. <ul style="list-style-type: none"> • M+L60AD2DA2_AD_SetOffsetVal • M+L60AD2DA2_AD_SetGainVal • M+L60AD2DA2_DA_SetOffsetVal • M+L60AD2DA2_DA_SetGainVal 5) This FB cannot configure the offset/gain settings of channel 1 and channel 2 simultaneously. To configure the offset/gain settings simultaneously, create a program instead of the use of this FB. 6) This FB uses index registers Z7 to Z9. Please do not use these index registers with an interrupt program. 7) Every input must be provided with a value for proper FB operation. 8) When this FB is used in two or more places, a duplicated coil warning may occur during compile operation due to the Y signal being operated by index modification. However this is not a problem and the FB will operate without error. 9) To operate the L60AD2DA2, set the I/O range according to the device and system to be connected. Configure the setting in Switch Setting of GX Works2 according to the application. For details on how to use the intelligent function module switch setting, refer to GX Works2 Version 1 Operating Manual (Common).
FB operation type	Pulsed execution (multiple scan execution type)
Application example	Refer to "Appendix 1. FB Library Application Examples".

Error codes

●Error code list

Error code	Description	Action
11 (Decimal)	The digital clipping upper limit value is equal to or smaller than the digital clipping lower limit value.	Please try again after confirming the setting.

Labels

●Input labels

Name (Comment)	Label name	Data type	Setting range	Description
Execution command	FB_EN	Bit	ON, OFF	ON: The FB is activated. OFF: The FB is not activated.
Digital value	i_Digital_Value	Word	-32,768 to 32,767	Specify the target digital value for the digital clipping.
Digital clipping upper limit value	i_Clip_U_Lim	Word	-32,768 to 32,767	Specify the digital clipping upper limit value.
Digital clipping lower limit value	i_Clip_L_Lim	Word	-32,768 to 32,767	Specify the digital clipping lower limit value.

●Output labels

Name (Comment)	Label name	Data type	Initial value	Description
Execution status	FB_ENO	Bit	OFF	ON: Execution command is ON. OFF: Execution command is OFF.
Completed without error	FB_OK	Bit	OFF	When ON, it indicates that the digital clipping is being executed.
Digital output value	o_Dig_Out_Val	Word	0	The input digital value to which the digital clipping has been executed is stored.
Error flag	FB_ERROR	Bit	OFF	When ON, it indicates that an error has occurred.
Error code	ERROR_ID	Word	0	FB error code output.

Item	Description
Programming language	Ladder
Number of steps	404 steps (for MELSEC-L series CPU) * The number of steps of the FB in a program depends on the CPU model that is used and input and output definition.
Function description	<ol style="list-style-type: none"> 1) By turning ON FB_EN (Execution command), the logging function of the specified A/D conversion channel (CH1 or CH2) is set. 2) FB operation is one-shot only, triggered by the FB_EN signal. 3) The setting value is validated when the Operating condition setting request signal (Yn9) is turned OFF → ON → OFF or the Operating condition setting request FB (M+L60AD2DA2_RequestSetting) is executed. 4) When the function selection of this FB is set for logging function, this FB is available. 5) When the function selection is not set for the logging function or the setting value of the target channel is out of range, FB_ERROR is turned ON and the processing is interrupted. The error code 10 (Decimal) or 60 (Decimal) is stored in ERROR_ID (Error code). Refer to the error code explanation section for details.
Compiling method	Macro type
Restrictions and precautions	<ol style="list-style-type: none"> 1) The FB does not include error recovery processing. Program the error recovery processing separately in accordance with the required system operation. 2) The FB cannot be used in an interrupt program. 3) Please ensure that the FB_EN signal is capable of being turned OFF by the program. Do not use this FB in programs that are only executed once such as a subroutine, FOR-NEXT loop because it is impossible to turn OFF. 4) When two or more of these FBs are used, precaution must be taken to avoid repetition of the target channel. 5) This FB uses index registers Z7 to Z9. Please do not use these index registers in an interrupt program. 6) Every input must be provided with a value for proper FB operation. 7) If the parameter is set using the configuration function of GX Works2, this FB is unnecessary. 8) To operate the L60AD2DA2, set the I/O range according to the device and system to be connected. Configure the setting in Switch Setting of GX Works2 according to the application. For details on how to use the intelligent function module switch setting, refer to GX Works2 Version 1 Operating Manual (Common).
FB operation type	Pulsed execution (1 scan execution type)

Item	Description
Application example	Refer to "Appendix 1. FB Library Application Examples".
Timing chart	<div style="display: flex; justify-content: space-around;"> <div style="width: 45%;"> <p>[When operation completes without error]</p> </div> <div style="width: 45%;"> <p>[When an error occurs]</p> </div> </div>
Relevant manuals	<ul style="list-style-type: none"> • MELSEC-L Analog Input/Output Module User's Manual • MELSEC-L CPU Module User's Manual (Hardware Design, Maintenance and Inspection) • GX Works2 Version 1 Operating Manual (Common) • GX Works2 Version 1 Operating Manual (Simple Project, Function Block)

Error codes

●Error code list

Error code	Description	Action
10 (Decimal)	The specified channel is not valid. The target channel is not within the range of 1 or 2.	Please try again after confirming the setting.
60 (Decimal)	The function selection of Switch 4 of the intelligent function module switch setting of the target module is set to other than the logging function.	Set the function selection of Switch 4 of the intelligent function module switch setting of the target module to the logging function, and execute the FB again.

Labels

● Input labels

Name (Comment)	Label name	Data type	Setting range	Description
Execution command	FB_EN	Bit	ON, OFF	ON: The FB is activated. OFF: The FB is not activated.
Module start XY address	i_Start_IO_No	Word	Depends on the I/O point range of the CPU. For details, refer to the CPU user's manual.	Specify the start XY address (in hexadecimal) where the L60AD2DA2 is connected. (For example, enter H10 for X10.)
Target CH	i_CH	Word	1, 2	Specify the channel number.
Logging enable/disable setting	i_Log_Enable	Bit	ON, OFF	ON: Logging function enabled OFF: Logging function disabled
Logging data setting	i_Log_Data	Word	0, 1	Set the logging target data. 0: Digital output value 1: Scaling value
Logging cycle setting value	i_Log_Cycle_Val	Word	1) Logging cycle unit setting = 0 80 to 32,767 2) Logging cycle unit setting = 1 1 to 32,767 3) Logging cycle unit setting = 2 1 to 3,600	Set the cycle for storing data.
Logging cycle unit setting	i_Log_Cycle_Unit	Word	0: μ s 1: ms 2: s	Set the cycle unit for storing data.
Logging points after trigger	i_Log_Points	Word	1 to 10,000	Set the data points to be collected after the hold trigger is detected.
Level trigger condition setting	i_Log_Trig_Cond	Word	0: Disable 1: Above 2: Below 3: Pass through	Set whether to use the level trigger or not and the condition for the level trigger when using the level trigger.

Name (Comment)	Label name	Data type	Setting range	Description
Trigger data	i_Log_Trig_Data	Word	0 to 4,999	Set the buffer memory address to be monitored by the level trigger.
Trigger setting value	i_Log_Trig_Value	Word	-32,768 to 32,767	Set a level at which a level trigger is generated.

●Output labels

Name (Comment)	Label name	Data type	Initial value	Description
Execution status	FB_ENO	Bit	OFF	ON: Execution command is ON. OFF: Execution command is OFF.
Completed without error	FB_OK	Bit	OFF	When ON, it indicates that the logging function parameter setting is completed.
Error flag	FB_ERROR	Bit	OFF	When ON, it indicates that an error has occurred.
Error code	ERROR_ID	Word	0	FB error code output.

Chinese (Simplified) version	Version 1.49B or later																						
Chinese (Traditional) version	Version 1.49B or later																						
Korean version	Version 1.49B or later																						
Programming language	Ladder																						
Number of steps	<p>2142 steps (for MELSEC-L series CPU)</p> <p>* The number of steps of the FB in a program depends on the CPU model that is used and input and output definition.</p>																						
Function description	1) By turning ON FB_EN (Execution command) and the logging hold flag, the logging data																						

Item	Description
	<p>is sorted chronologically from the head pointer. Then, the logging data and the trigger detection information are saved in CSV format in the SD memory card mounted on the CPU.</p> <p>2) When FB_EN (Execution command) is ON, the FB starts the save processing of the logging data each time the logging hold flag is turned ON.</p> <p>3) If an input signal error is detected or the external power supply is turned OFF during the logging, the logging stops.</p> <p>In this case, the logging data is saved by turning on FB_EN (Execution command) after i_Save_Order (Logging forced save command) is turned ON.</p> <p>When the logging enable/disable setting is disabled, the logging data is not saved even if FB_EN (Execution command) is turned ON after i_Save_Order (Logging forced save command) is turned ON. FB_ERROR is turned ON and the processing is interrupted. The error code 70 (Decimal) is stored in ERROR_ID.</p> <p>Refer to the error code explanation section for details.</p> <p>4) It requires multiple scans to complete the save processing of the logging data. To check whether it is completed, check FB_OK (Completed without error).</p> <p>5) The format for the file name that the FB saves in an SD memory card is "AD" + "second and third digits of the module start XY address that is expressed in 4 digits" + "Target channel" + "serial number" + ".CSV". The maximum serial number depends on i_Max_Number (Maximum No. of save files). If FB_EN (Execution command) is turned OFF, the serial number is reset and the serial number starts from 1 again.</p> <p>[File name example]</p> <p>The file name is "AD452006.CSV" in the following case. The module start XY address is H0450, the target channel is 2, i_Max_Number (Maximum No. of save files) is 30, and the number of files this FB created is 6.</p> <p>6) When a file with the same name exists in the SD memory card, the existing file is replaced with a new CSV file created by this FB.</p> <p>7) When FB_EN (Execution command) is turned ON after i_Over_Write (Overwrite save command) is turned ON and the number of files that this FB stored in the SD memory card exceeds i_Max_Number (Maximum No. of save files), the serial number returns to 1 and the save processing of the logging data continues.</p> <p>8) When FB_EN (Execution command) is turned ON after i_Over_Write (Overwrite save command) is turned OFF and the number of files that this FB stored in the SD memory card exceeds i_Max_Number (Maximum No. of save files), the save processing of the logging data stops.</p> <p>9) If the number of files that the FB stored in the SD memory card has reached i_Max_Number (Maximum No. of save files), o_Exceed_Number (Maximum No.</p>

Item	Description
	<p>exceeded flag) is turned ON regardless of whether i_Over_Write (Overwrite save command) is ON or OFF.</p> <p>10) Only when the target module is processing the logging and the logging status monitor value (Un\G1146, Un\G1147) is not "F: Stop (disabled)", this FB can be used.</p> <p>11) When FB_EN (Execution command) is turned ON while the target module is not processing the logging and the logging status monitor value (Un\G1146, Un\G1147) is "F: Stop (disabled)", FB_ERROR is turned ON and the processing of the FB is interrupted. Additionally, when the setting of the target channel or the setting value of the maximum No. of save files is out of range, FB_ERROR is turned ON and the processing of the FB is interrupted.</p> <p>The error code 10 (Decimal), 11 (Decimal), or 60 (Decimal) is stored in ERROR_ID. Refer to the error code explanation section for details.</p> <p>12) When the SD memory card mounted on the CPU does not have enough capacity or when the number of files to be created exceeds the number of storable files *1, a CPU error *2 occurs. When the CPU is set to stop at the error occurrence, FB_ERROR and ERROR_ID are not updated.</p> <p>When the CPU is set to continue running at the error occurrence, FB_ERROR is turned ON and an error code is stored in ERROR_ID.</p> <p>13) For the format of the CSV file that this FB creates, refer to "Appendix 2. CSV File Format for Logging data save FB".</p> <p>*1 For information on the size of SD memory card and the number of files that can be saved, refer to MELSEC-L CPU Module User's Manual (Hardware Design, Maintenance and Inspection).</p> <p>*2 Setting the operation status of the CPU module (RUN/STOP) when an access error to the SD memory card occurs is available with parameters.</p>
Compiling method	Macro type
Restrictions and precautions	<ol style="list-style-type: none"> 1) The FB does not include error recovery processing. Program the error recovery processing separately in accordance with the required system operation. 2) The FB cannot be used in an interrupt program. 3) Please ensure that the FB_EN signal is capable of being turned OFF by the program. Do not use this FB in programs that are only executed once such as a subroutine, FOR-NEXT loop because it is impossible to turn OFF. 4) This FB uses index registers Z6 to Z9. Please do not use these index registers in an interrupt program. 5) In this FB, the logging data can be saved only in the SD memory card. 6) This FB uses the SP.FWRITE command. Thus, when an execution error of the SP.FWRITE command occurs, a CPU error occurs.

Item	Description
	<p>7) Do not use this FB when the CPU module that does not have a SD memory slot is used. Even if used with such a CPU module, this FB does not operate.</p> <p>8) When two or more of these FBs are used, implement an interlock to prevent them from being executed simultaneously. [Interlock example] When the target channels are set to channels 1 and 2 and their logging data are saved, confirm that FB_OK (Completed without error) for channel 1 is turned ON before turning ON FB_EN (Execution command) for channel 2.</p> <p>9) When this FB is executed while the protect switch of the SD memory card ON, the logging data cannot be saved. FB_ERROR is turned ON and the processing is interrupted. The error code 31 (Decimal) is stored in ERROR_ID. Refer to the error code explanation section for details.</p> <p>10) When this FB is executed without an SD memory card on the CPU module, FB_ERROR is turned ON and the processing is interrupted. The error code 33 (Decimal) is stored in ERROR_ID. Refer to the error code explanation section for details.</p> <p>11) When this FB is executed with SM605 (Memory card remove/insert prohibit flag) OFF, which can be set by sliding the SD memory card disabling switch upward, FB_ERROR is turned ON and the processing is interrupted. The error code 35 (Decimal) is stored in ERROR_ID. Refer to the error code explanation section for details.</p> <p>12) When SM606 (SD memory card forced disable instruction) is turned ON while the logging data is being saved, SP.FWRITE is not processed and the logging data cannot be saved. FB_ERROR is turned ON and the processing is interrupted. The error code 36 (Decimal) is stored in ERROR_ID. Refer to the error code explanation section for details.</p> <p>13) When this FB is executed with the SD memory card accessed by, for example, the data logging function of LCPU, the time for completing this FB may extend or a timeout error (Error code 40 (Decimal)) may occur. For details, refer to Section 13.2.4 Troubleshooting on the entire system during operation of the data logging function of MELSEC-L CPU Module User's Manual (Data Logging Function). Refer to the error code explanation section for details.</p> <p>14) Every input must be provided with a value for proper FB operation.</p> <p>15) Pay attention to the size of the SD memory card and the number of files that can be saved when determining i_Max_Number (Maximum No. of save files). If the size of the SD memory card or the number of files that can be saved is exceeded when this FB is</p>

Item	Description
	<p>executed, a CPU error occurs. For information on the size of SD memory card and the number of files that can be saved, refer to MELSEC-L CPU Module User's Manual (Hardware Design, Maintenance and Inspection).</p> <p>16) To operate the L60AD2DA2, set the I/O range according to the device and system to be connected. Configure the setting in Switch Setting of GX Works2 according to the application.</p> <p>For details on how to use the intelligent function module switch setting, refer to GX Works2 Version 1 Operating Manual (Common).</p>
FB operation type	Pulsed execution (multiple scan execution type)
Application example	Refer to "Appendix 1. FB Library Application Examples".
Timing chart	<div style="display: flex; justify-content: space-around;"> <div style="width: 45%;"> <p>[When operation completes without error]</p> </div> <div style="width: 45%;"> <p>[When an error occurs]</p> </div> </div>
Relevant manuals	<ul style="list-style-type: none"> • MELSEC-L Analog Input/Output Module User's Manual • MELSEC-L CPU Module User's Manual (Hardware Design, Maintenance and Inspection) • MELSEC-L CPU Module User's Manual (Data Logging Function) • GX Works2 Version 1 Operating Manual (Common) • GX Works2 Version 1 Operating Manual (Simple Project, Function Block)

Error codes

●Error code list

Error code	Description	Action
10 (Decimal)	The specified channel is not valid. The target channel is not within the range of 1 or 2.	Please try again after confirming the setting.
11 (Decimal)	The maximum number of save files is not valid. The maximum number of save files is not within the range of 1 to 999.	Please try again after confirming the setting.

Error code	Description	Action
20 (Decimal)	The processing is interrupted because the logging hold flag or i_Save_Order (Logging forced save command) is turned OFF while the logging data is being saved. An incomplete CSV file is saved in the SD memory card.	Please try again after confirming the setting so that the logging hold flag or i_Save_Order (Logging forced save command) is not turned OFF while the logging data is being saved.
31 (Decimal)	No data can be written to the SD memory card because SM601 (Memory card protect flag) is ON (Write prohibited).	Execute the FB again after turning OFF the protect switch of the SD memory card and confirming that SM601 is OFF (Write permitted).
33 (Decimal)	This FB is executed with no SD memory card on the CPU module.	Execute this FB again after mounting the SD memory card to which the target CSV file is saved on the CPU module.
35 (Decimal)	The SD memory card cannot be accessed because SM605 (Memory card remove/insert prohibit flag) is turned OFF.	Execute the FB again after turning ON SM605 (Memory card remove/insert prohibit flag) by sliding the SD memory card disabling switch downward.
36 (Decimal)	SM606 (SD memory card forced disable instruction) is ON, and access to the SD memory card is unavailable. If SM606 (SD memory card forced disable instruction) is turned ON while the logging data is being saved, an incomplete CSV file is saved in the SD memory card.	Execute the FB again after disabling the SD memory card forced disable instruction by turning OFF SM606 and confirming that SM607 (SD memory card use force stop condition flag) is OFF.
40 (Decimal)	The logging data saving processing timeout occurred because accesses to the SD memory card are frequently made in addition to this FB.	Reduce the frequency of the access processing to the SD memory card.

Error code	Description	Action
60 (Decimal)	When the target module was not processing the logging and the logging status monitor value (Un\G1146, Un\G1147) was "F: Stop (disabled)", FB_EN (Execution command) was turned ON.	After enabling the logging enable/disable setting (Un\G1000, Un\G1001), turn OFF → ON → OFF the Operating condition setting request signal (Yn9) or execute the Operating condition setting request FB (M+L60AD2DA2_RequestSetting) to execute the logging. Execute the FB again after confirming that the logging status monitor value (Un\G1146, Un\G1147) is other than "F: Stop (disabled)". To save data while the logging is stopped, turn ON FB_EN (Execution command) after turning ON i_Save_Order (Logging forced save instruction).
70 (Decimal)	When the logging enable/disable setting was disabled, FB_EN (Execution command) was turned ON after i_Save_Order (Logging forced save instruction) was turned ON to start saving the logging data.	After enabling the logging enable/disable setting (Un\G1000, Un\G1001), turn OFF → ON → OFF the Operating condition setting request signal (Yn9) or execute the Operating condition setting request FB (M+L60AD2DA2_RequestSetting) to execute the logging. After the logging, execute the FB again.
Error codes other than above	The error code of the CPU module	For details on the caused error code, refer to Appendix 1 Error Code Lists of MELSEC-L CPU Module User's Manual (Hardware Design, Maintenance and Inspection).

Labels

● Input labels

Name (Comment)	Label name	Data type	Setting range	Description
Execution command	FB_EN	Bit	ON, OFF	ON: The FB is activated. OFF: The FB is not activated.
Module start XY address	i_Start_IO_No	Word	Depends on the I/O point range of the CPU. For details, refer to the CPU user's manual.	Specify the start XY address (in hexadecimal) where the L60AD2DA2 is connected. (For example, enter H10 for X10.)
Target CH	i_CH	Word	1, 2	Specify the channel number.
Maximum No. of save files	i_Max_Number	Word	1 to 999	Specify the maximum number of CSV files the FB saves.
Overwrite save command	i_Over_Write	Bit	ON, OFF	Set whether to overwrite a CSV file with the youngest serial number when the number of CSV files saved by this FB exceeds the maximum number of save files. (When OFF, the save processing of logging data stops.)
Logging forced save command	i_Save_Order	Bit	ON, OFF	Turn ON to save the logging data while the logging is stopped (disabled). Turn OFF after the saving.

●Output labels

Name (Comment)	Label name	Data type	Initial value	Description
Execution status	FB_ENO	Bit	OFF	ON: Execution command is ON. OFF: Execution command is OFF.
Completed without error	FB_OK	Bit	OFF	When ON, it indicates that the file save is completed. Turned OFF when the logging resumes.
Creating file	o_Making_File	Bit	OFF	When ON, it indicates that a file is being created.
Maximum No. exceeded flag	o_Exceed_Number	Bit	OFF	When ON, it indicates that the number of CSV files saved by this FB has reached the maximum number of save files.
Error flag	FB_ERROR	Bit	OFF	When ON, it indicates that an error has occurred.
Error code	ERROR_ID	Word	0	FB error code output.

FB Version Upgrade History

Version	Date	Description
1.00A	2013/08/30	First edition

Note

This chapter includes information related to the function block.

It does not include information on restrictions of use such as combination with modules or programmable controller CPUs.

Please make sure to read user's manuals for the corresponding products before using the products.

2.2. D/A conversion FB

2.2.1. M+L60AD2DA2_DA_WriteDAVal (Write D/A conversion data)

FB Name

M+L60AD2DA2_DA_WriteDAVal

Function Overview

Item	Description																	
Function overview	Writes the D/A conversion data of the specified D/A conversion channel (CH3 or CH4).																	
Symbol	<div style="border: 1px solid black; padding: 10px; width: fit-content; margin: auto;"> <p style="text-align: center; margin: 0;">M+L60AD2DA2_DA_WriteDAVal</p> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 30%; padding: 2px;">Execution command</td> <td style="width: 30%; padding: 2px;">B : FB_EN</td> <td style="width: 30%; padding: 2px;">FB_ENO : B</td> <td style="width: 10%; padding: 2px;">Execution status</td> </tr> <tr> <td style="padding: 2px;">Module start XY address</td> <td style="padding: 2px;">W : i_Start_IO_No</td> <td style="padding: 2px;">FB_OK : B</td> <td style="padding: 2px;">Completed without error</td> </tr> <tr> <td style="padding: 2px;">Target CH</td> <td style="padding: 2px;">W : i_CH</td> <td style="padding: 2px;">FB_ERROR : B</td> <td style="padding: 2px;">Error flag</td> </tr> <tr> <td style="padding: 2px;">Digital value</td> <td style="padding: 2px;">W : i_DA_Value</td> <td style="padding: 2px;">ERROR_ID : W</td> <td style="padding: 2px;">Error code</td> </tr> </table> </div>		Execution command	B : FB_EN	FB_ENO : B	Execution status	Module start XY address	W : i_Start_IO_No	FB_OK : B	Completed without error	Target CH	W : i_CH	FB_ERROR : B	Error flag	Digital value	W : i_DA_Value	ERROR_ID : W	Error code

Error codes

● Error code list

Error code	Description	Action
10 (Decimal)	The specified channel is not valid. The target channel is not within the range of 3, 4, or 15.	Please try again after confirming the setting.

Labels

● Input labels

Name (Comment)	Label name	Data type	Setting range	Description
Execution command	FB_EN	Bit	ON, OFF	ON: The FB is activated. OFF: The FB is not activated.
Module start XY address	i_Start_IO_No	Word	Depends on the I/O point range of the CPU. For details, refer to the CPU user's manual.	Specify the start XY address (in hexadecimal) where the L60AD2DA2 is connected. (For example, enter H10 for X10.)
Target CH	i_CH	Word	3, 4, 15	3 or 4: Specify the channel number. 15: Specify channel 3 and channel 4.
D/A conversion enable/disable setting	i_DA_Enable	Bit	ON, OFF	ON: D/A conversion enabled OFF: D/A conversion disabled

●Output labels

Name (Comment)	Label name	Data type	Initial value	Description
Execution status	FB_ENO	Bit	OFF	ON: Execution command is ON. OFF: Execution command is OFF.
Completed without error	FB_OK	Bit	OFF	When ON, it indicates that the conversion enable/disable setting is completed.
Error flag	FB_ERROR	Bit	OFF	When ON, it indicates that an error has occurred.
Error code	ERROR_ID	Word	0	FB error code output.

FB Version Upgrade History

Version	Date	Description

Execution command	FB_EN	Bit	ON, OFF	ON: The FB is activated. OFF: The FB is not activated.
Module start XY address	i_Start_IO_No	Word	Depends on the I/O point range of the CPU. For details, refer to the CPU user's manual.	Specify the start XY address (in hexadecimal) where the L60AD2DA2 is connected. (For example, enter H10 for X10.)
Target CH	i_CH	Word	3, 4	Specify the channel number.
Alert output enabled/disabled	i_Alarm_Enable	Bit	ON, OFF	ON: Enabled OFF: Disabled
Alert output upper limit value	i_Alm_U_Lim	Word	-32,768 to 32,767	Specify the alert output upper limit value.
Alert output lower limit value	i_Alm_L_Lim	Word	-32,768 to 32,767	Specify the alert output lower limit value.

●Output labels

Name (Comment)	Label name	Data type	Initial value	Description
Execution status	FB_ENO	Bit	OFF	ON: Execution command is ON. OFF: Execution command is OFF.
Completed without error	FB_OK	Bit	OFF	When ON, it indicates that the alert output function setting is completed.
Error flag	FB_ERROR	Bit	OFF	When ON, it indicates that an error has occurred.
Error code	ERROR_ID	Word	0	FB error code output.

Number of steps	<p>482 steps (for MELSEC-L series CPU)</p> <p>* The number of steps of the FB in a program depends on the CPU model that is used and input and output definition.</p>																									

Item	Description
Function description	<ol style="list-style-type: none"> 1) By turning ON FB_EN (Execution command), the offset of the specified D/A conversion channel (CH3 or CH4) is set. 2) To adjust the D/A output, set i_Adjust_Amount (Offset/gain adjustment amount) and turn ON from OFF i_Value_Change (Set value change command) while the FB_EN (Execution command) is ON. 3) By turning ON the user range write command while FB_EN (Execution command) is ON, the offset value is written. 4) When the setting value of the target channel is out of range, the FB_ERROR output turns ON and processing is interrupted, and the error code is stored in ERROR_ID (Error code). Refer to the error code explanation section for details.
Compiling method	Macro type
Restrictions and precautions	<ol style="list-style-type: none"> 1) The FB does not include error recovery processing. Program the error recovery processing separately in accordance with the required system operation. 2) The FB cannot be used in an interrupt program. 3) Please ensure that the FB_EN signal is capable of being turned OFF by the program. Do not use this FB in programs that are only executed once such as a subroutine, FOR-NEXT loop because it is impossible to turn OFF. 4) When the following FBs are used, implement an external interlock to prevent them from being executed simultaneously. Do not use two or more of these FBs simultaneously. If two or more of these FBs are executed simultaneously, the offset/gain is set incorrectly. <ul style="list-style-type: none"> • M+L60AD2DA2_AD_SetOffsetVal • M+L60AD2DA2_AD_SetGainVal • M+L60AD2DA2_DA_SetOffsetVal • M+L60AD2DA2_DA_SetGainVal 5) This FB uses index registers Z7 to Z9. Please do not use these index registers in an interrupt program. 6) Every input must be provided with a value for proper FB operation. 7) When this FB is used in two or more places, a duplicated coil warning may occur during compile operation due to the Y signal being operated by index modification. However this is not a problem and the FB will operate without error. 8) To operate the L60AD2DA2, set the I/O range according to the device and system to be connected. Configure the setting in Switch Setting of GX Works2 according to the application. For details on how to use the intelligent function module switch setting, refer to GX Works2 Version 1 Operating Manual (Common).
FB operation type	Pulsed execution (multiple scan execution type)

Item	Description
Application example	Refer to "Appendix 1. FB Library Application Examples".
Timing chart	<p>[When operation completes without error]</p> <p>[When an error occurs]</p>

Number of steps	192 steps (for MELSEC-L series CPU) * The number of steps of the FB in a program depends on the CPU model that is used and input and output definition.																					

Item	Description
Function description	<p>1) By turning ON FB_EN (Execution command), the input value shift amount is added to the digital value *1.</p> <p>*1 Input a digital value that is to be written by M+L60AD2DA2_DA_WriteDAVal or other methods to the L60AD2DA2 as the digital value.</p> <p>2) When the addition result falls below -32,768 (exceeds 32,767), the value is fixed to -32,768 (32,767).</p>
Compiling method	Macro type
Restrictions and precautions	<p>1) The FB does not include error recovery processing. Program the error recovery processing separately in accordance with the required system operation.</p> <p>2) The FB cannot be used in an interrupt program.</p> <p>3) Please ensure that the FB_EN signal is capable of being turned OFF by the program. Do not use this FB in programs that are only executed once such as a subroutine, FOR-NEXT loop because it is impossible to turn OFF.</p> <p>4) Every input must be provided with a value for proper FB operation.</p> <p>5) To operate the L60AD2DA2, set the I/O range according to the device and system to be connected. Configure the setting in Switch Setting of GX Works2 according to the application.</p> <p>For details on how to use the intelligent function module switch setting, refer to GX Works2 Version 1 Operating Manual (Common).</p> <p>6) When FB_OK (Completed without error) is ON, o_Dig_Out_Val (Digital output value) is effective.</p> <p>7) By turning OFF FB_EN, o_Dig_Out_Val (Digital output value) is cleared to 0.</p>
FB operation type	Real-time execution
Application example	Refer to "Appendix 1. FB Library Application Examples".
Timing chart	<p>[When operation completes without error]</p> <p>The timing chart illustrates the sequence of events for the FB library application. It shows the following signals and their states:</p> <ul style="list-style-type: none"> FB_EN (Execution command): A pulse that initiates the shift operation. FB_ENO (Execution status): An active-low signal that becomes low when the shift operation begins and returns high when it ends. Shift operation: A series of pulses representing the shift operation. The chart is divided into three phases: 'During shift processing', 'During shift processing stopped', and 'During shift processing'. FB_OK (Completed without error): An active-low signal that becomes low when the shift operation is completed without error. FB_ERROR (Error flag): Remains at 0 throughout the process. ERROR_ID (Error code): Remains at 0 throughout the process.

Function Overview

Item	Description																	
Function overview	Reads data from the CSV file where parameters and wave data (wave data and wave data points) of the wave output function are stored, then writes them to the buffer memory of the L60AD2DA2.																	
Symbol	<div style="border: 1px solid black; padding: 10px; width: fit-content; margin: auto;"> <p style="text-align: center; margin: 0;">M+L60AD2DA2_DA_WaveDataStoreCsv</p> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 30%; padding: 2px;">Execution command</td> <td style="width: 30%; padding: 2px;">B : FB_EN</td> <td style="width: 30%; padding: 2px;">FB_ENO : B</td> <td style="width: 10%; padding: 2px;">Execution status</td> </tr> <tr> <td style="padding: 2px;">Module start XY address</td> <td style="padding: 2px;">W : i_Start_IO_No</td> <td style="padding: 2px;">FB_OK : B</td> <td style="padding: 2px;">Completed without error</td> </tr> <tr> <td style="padding: 2px;">CSV file name</td> <td style="padding: 2px;">S : i_FileName</td> <td style="padding: 2px;">FB_ERROR : B</td> <td style="padding: 2px;">Error flag</td> </tr> <tr> <td></td> <td></td> <td style="padding: 2px;">ERROR_ID : W</td> <td style="padding: 2px;">Error code</td> </tr> </table> </div>		Execution command	B : FB_EN	FB_ENO : B	Execution status	Module start XY address	W : i_Start_IO_No	FB_OK : B	Completed without error	CSV file name	S : i_FileName	FB_ERROR : B	Error flag			ERROR_ID : W	Error code

Number of steps	<p>1029 steps (for MELSEC-L series CPU)</p> <p>* The number of steps of the FB in a program depends on the CPU model that is used and input and output definition.</p>																	

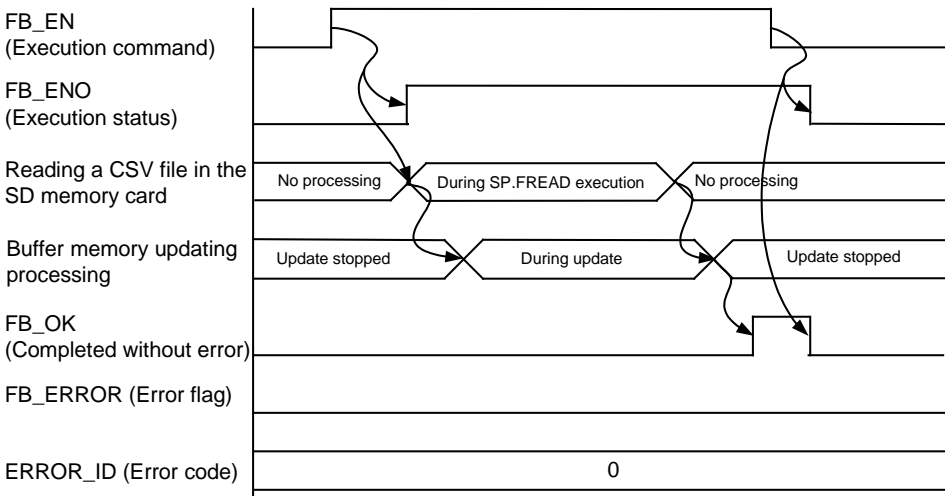

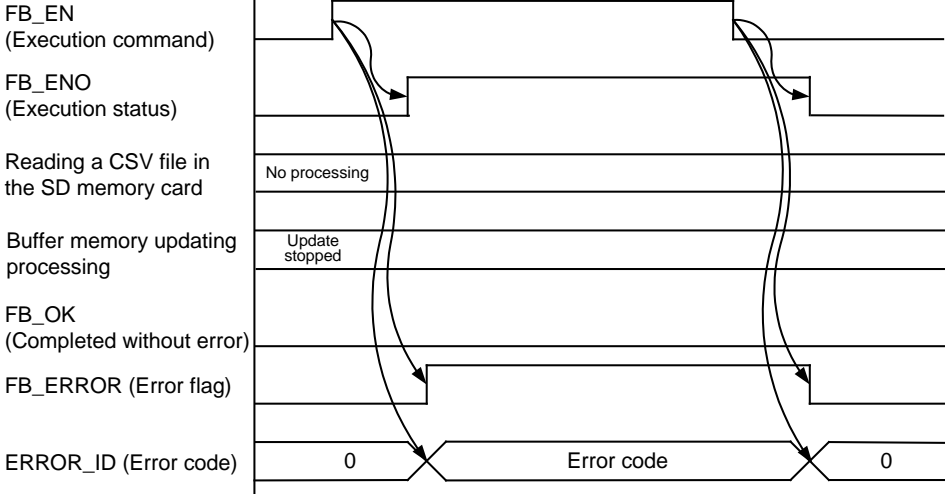

Item	Description
Function description	<p>1) By turning ON FB_EN (Execution command), the parameters and wave data of the wave output function is read from the CSV file stored in the SD memory card inserted in the CPU module and stored in the buffer memory of the L60AD2DA2.</p> <p>CSV file in the SD memory card</p> <pre data-bbox="454 459 630 660"> 1,1 0,0 25000,35000 10000,20000 20000,32767 1,1 </pre>  <p>M+L60AD2DA2_DA_WaveDataStoreCsv</p> <p>SD memory card</p> <p>CPU module (L26CPU-BT)</p> <p>Analog I/O module (L60AD2DA2)</p> <p>Buffer memory</p> <p>Parameter of the wave output function</p> <p>Wave data</p> <p>UnG3010</p> <p>UnG5000</p> <p>UnG54999</p> <p>For the wave output function, refer to MELSEC-L Analog Input/Output Module User's Manual.</p> <p>2) The read parameters of the wave output function is validated when the Operating condition setting request signal (Yn9) is turned OFF → ON → OFF or the Operating condition setting request FB (M+L60AD2DA2_RequestSetting) is executed.</p> <p>3) "Table 1 Storage Source "Wave Output Function Parameter and Data" and Storage Location Buffer Memory" in Appendix 3 lists "parameters and data of the wave output function" and the storage location buffer memory address that this FB processes. Describe the parameters and data in the list to a file according to "Appendix 4. CSV File Format for Wave Data Reading FB (CSV File)" and save the file in the root folder (directory) of the SD memory card.</p> <p>This FB reads all the parameters of the wave output function from the CSV file and stores them in the buffer memory (UnG3010 to 3067). Then, this FB reads "Wave data" specified in "Number of wave data" of the line 100 in the CSV file from the line 101 in</p>

Item	Description
	<p>order for the number of specified points, and stores them into the start address (Un\G5000) or later of the wave data registration area of the buffer memory.</p> <p>The CSV file of the wave output function can be created easily with the "Create wave output data" tool of GX Works2.</p> <p>4) When the CSV file specified by i_FileName (CSV file name) does not exist in the SD memory card inserted to the CPU module, a CPU error (Error code: 2410) occurs.</p> <p>* When the CPU is set to stop at the CPU error occurrence, FB_ERROR and ERROR_ID are not updated. The operation status of the CPU module (RUN/STOP) for when the CPU error occurs can be set in [PLC RAS] *1.</p> <p>*1: [Parameter] ⇨ [PLC Parameter] ⇨ [PLC RAS] ⇨ "File Access Error " in "When There is an Error"</p> <p>5) When FB_EN (Execution command) is turned OFF before the execution of this FB is completed, the processing is interrupted. At that time, the data stored in the buffer memory is not cleared.</p> <p>When the FB is executed again, the reading processing is started from the beginning.</p> <p>6) Only when the function selection is set to the wave output function, this FB can be used.</p> <p>7) When the function selection is set to other than the wave output function, FB_ERROR is turned ON and the processing of the FB is interrupted.</p> <p>The error code 60 (Decimal) is stored in ERROR_ID.</p> <p>Refer to the error code explanation section for details.</p> <p>8) Do not remove the SD memory card during the execution of this FB. For the insertion or removal method of the SD memory card, refer to MELSEC-L CPU Module User's Manual (Hardware Design, Maintenance and Inspection).</p>
Compiling method	Macro type
Restrictions and precautions	<p>1) This FB requires many scans and takes long time to complete the processing. Therefore, this FB should be executed during the warm up of the L60AD2DA2.</p> <p>2) The FB does not include error recovery processing. Program the error recovery processing separately in accordance with the required system operation.</p> <p>3) The FB cannot be used in an interrupt program.</p> <p>4) Please ensure that the FB_EN signal is capable of being turned OFF by the program. Do not use this FB in programs that are only executed once such as a subroutine, FOR-NEXT loop because it is impossible to turn OFF.</p> <p>5) This FB uses index registers Z7 to Z9. Please do not use these index registers in an interrupt program.</p> <p>6) This FB uses the SP.FREAD command. Thus, when an execution error of the SP.FREAD command occurs, a CPU error occurs.</p> <p>7) Do not use this FB when the CPU module that does not have a SD memory slot is used.</p>

Item	Description
	<p>Even if used with such a CPU module, this FB does not operate.</p> <p>8) When this FB is executed without an SD memory card on the CPU module, FB_ERROR is turned ON and the processing is interrupted. The error code 33 (Decimal) is stored in ERROR_ID. Refer to the error code explanation section for details.</p> <p>9) When this FB is executed with SM605 (Memory card remove/insert prohibit flag) OFF, which can be set by sliding the SD memory card disabling switch upward, FB_ERROR is turned ON and the processing is interrupted. The error code 35 (Decimal) is stored in ERROR_ID. Refer to the error code explanation section for details.</p> <p>10) When this FB is executed with SM606 (SD memory card forced disable instruction) ON, SP.FREAD is not processed and the wave data cannot be read. FB_ERROR is turned ON and the processing is interrupted. The error code 36 (Decimal) is stored in ERROR_ID. Refer to the error code explanation section for details.</p> <p>11) When this FB is executed with the SD memory card accessed by, for example, the data logging function of LCPU, the time for completing this FB may extend or a timeout error (Error 40 (Decimal)) may occur. For details, refer to Section 13.2.4 Troubleshooting on the entire system during operation of the data logging function of MELSEC-L CPU Module User's Manual (Data Logging Function).</p> <p>12) When two or more of these FBs are used, they cannot be used simultaneously.</p> <p>13) Every input must be provided with a value for proper FB operation.</p> <p>14) To operate the L60AD2DA2, set the I/O range according to the device and system to be connected. Configure the setting in Switch Setting of GX Works2 according to the application. For details on how to use the intelligent function module switch setting, refer to GX Works2 Version 1 Operating Manual (Common).</p>
FB operation type	Pulsed execution (multiple scan execution type)
Application example	Refer to "Appendix 1. FB Library Application Examples".

Item	Description

Relevant manuals	<ul style="list-style-type: none"> • MELSEC-L Analog Input/Output Module User's Manual • MELSEC-L CPU Module User's Manual (Hardware Design, Maintenance and Inspection) • MELSEC-L CPU Module User's Manual (Data Logging Function) • GX Works2 Version 1 Operating Manual (Common) • GX Works2 Version 1 Operating Manual (Simple Project, Function Block)

Error codes

●Error code list

Error code	Description	Action
33 (Decimal)	This FB is executed with no SD memory card on the CPU module.	Execute this FB again after mounting the SD memory card to which the target CSV file is saved on the CPU module. Or execute this FB again after inserting the available SD memory card and saving the target CSV file to the SD memory card using "Write PLC User Data" of GX Works2.
35 (Decimal)	The SD memory card cannot be accessed because SM605 (Memory card remove/insert prohibit flag) is turned OFF.	Execute the FB again after turning ON SM605 (Memory card remove/insert prohibit flag) by sliding the SD memory card disabling switch downward.
36 (Decimal)	SM606 (SD memory card forced disable instruction) is ON, and access to the SD memory card is unavailable.	Execute the FB again after disabling the SD memory card forced disable instruction by turning OFF SM606 and confirming that SM607 (SD memory card use force stop condition flag) is OFF.
40 (Decimal)	The wave data reading processing timeout occurred because accesses to the SD memory card were frequently made in addition to this FB.	Reduce the frequency of the access processing to the SD memory card.
60 (Decimal)	The function selection of Switch 4 of the intelligent function module switch setting of the target module is set to other than the wave output function.	Set the function selection of Switch 4 of the intelligent function module switch setting of the target module to the wave output function, and execute the FB again.
Error codes other than above	The error code of the CPU module	For details on the caused error code, refer to Appendix 1 Error Code Lists of MELSEC-L CPU Module User's Manual (Hardware Design, Maintenance and Inspection).

Labels

●Input labels

Name (Comment)	Label name	Data type	Setting range	Description
Execution command	FB_EN	Bit	ON, OFF	ON: The FB is activated. OFF: The FB is not activated.
Module start XY address	i_Start_IO_No	Word	Depends on the I/O point range of the CPU. For details, refer to the CPU user's manual.	Specify the start XY address (in hexadecimal) where the L60AD2DA2 is connected. (For example, enter H10 for X10.)
CSV file name	i_FileName	Character string	12 characters or less	Specify the name of the CSV file in which the parameters and the wave data of the wave output function are stored. (Only CSV is valid for a file attribute.) For details of the CSV file format, refer to "Appendix 4. CSV File Format for Wave Data Reading FB (CSV File)".

●Output labels

Name (Comment)	Label name	Data type	Initial value	Description
Execution status	FB_ENO	Bit	OFF	ON: Execution command is ON. OFF: Execution command is OFF.
Completed without error	FB_OK	Bit	OFF	When ON, it indicates that writing the parameters and wave data of the wave output function in the CSV file to the buffer memory of the L60AD2DA2 is completed.
Error flag	FB_ERROR	Bit	OFF	When ON, it indicates that an error has occurred.
Error code	ERROR_ID	Word	0	FB error code output.

Korean version	Version1.49B or later																															
Programming language	Ladder																															

Item	Description
Number of steps	403 steps (for MELSEC-L series CPU) * The number of steps of the FB in a program depends on the CPU model that is used and input and output definition.
Function description	<ol style="list-style-type: none"> 1) By turning ON FB_EN (Execution command), the wave output for the specified D/A conversion channel (CH3 or CH4) or all the D/A conversion channels (CH3 and CH4) is set. 2) The setting value is validated when the Operating condition setting request signal (Yn9) is turned OFF → ON → OFF or the Operating condition setting request FB (M+L60AD2DA2_RequestSetting) is executed. 3) Only when the function selection is set to the wave output function, this FB can be used. Set the wave output data for the analog output in advance. 4) When the function selection is not set for the wave output function or the setting value of the target channel is out of range, FB_ERROR is turned ON and the processing is interrupted. The error code 10 (Decimal) or 60 (Decimal) is stored in ERROR_ID (Error code). Refer to the error code explanation section for details.
Compiling method	Macro type
Restrictions and precautions	<ol style="list-style-type: none"> 1) The FB does not include error recovery processing. Program the error recovery processing separately in accordance with the required system operation. 2) The FB cannot be used in an interrupt program. 3) Please ensure that the FB_EN signal is capable of being turned OFF by the program. Do not use this FB in programs that are only executed once such as a subroutine, FOR-NEXT loop because it is impossible to turn OFF. 4) When two or more of these FBs are used, precaution must be taken to avoid repetition of the target channel. 5) This FB uses index registers Z6 to Z9. Please do not use these index registers in an interrupt program. 6) Every input must be provided with a value for proper FB operation. 7) To operate the L60AD2DA2, set the I/O range according to the device and system to be connected. Configure the setting in Switch Setting of GX Works2 according to the application. For details on how to use the intelligent function module switch setting, refer to GX Works2 Version 1 Operating Manual (Common).
FB operation type	Pulsed execution (1 scan execution type)
Application example	Refer to "Appendix 1. FB Library Application Examples".

Item	Description
Timing chart	<div style="display: flex; justify-content: space-around;"> <div style="width: 45%;"> <p>[When operation completes without error]</p> </div> <div style="width: 45%;"> <p>[When an error occurs]</p> </div> </div>

Error codes

●Error code list

Error code	Description	Action
10 (Decimal)	The specified channel is not valid. Set 3, 4, or 15 to the target channel.	Please try again after confirming the setting.
60 (Decimal)	The function selection of Switch 4 of the intelligent function module switch setting of the target module is set to other than the wave output function.	Set the function selection of Switch 4 of the intelligent function module switch setting of the target module to the wave output function, and execute the FB again.

Labels

●Input labels

Name (Comment)	Label name	Data type	Setting range	Description
Execution command	FB_EN	Bit	ON, OFF	ON: The FB is activated. OFF: The FB is not activated.
Module start XY address	i_Start_IO_No	Word	Depends on the I/O point range of the CPU. For details, refer to the CPU user's manual.	Specify the start XY address (in hexadecimal) where the L60AD2DA2 is connected. (For example, enter H10 for X10.)
Target CH	i_CH	Word	3, 4, 15	3 or 4: Specify the channel number. 15: Specify channel 3 and channel 4.

Name (Comment)	Label name	Data type	Setting range	Description
Output setting during wave output stop	i_OutputSelect	Word	0: 0V/0mA 1: Offset value 2: Output value during wave output stop	Specify the output value during the wave output stop.
Output value during wave output stop	i_OutputValue	Word	<ul style="list-style-type: none"> 0 to 12,287 (For range of 0 to 5V, 1 to 5V, 0 to 20mA, and 4 to 20mA) -16,384 to 16,383 (For range of -10 to 10V) 	Set the value to be output when "2: Output value during wave output stop" is selected in "Output setting during wave output stop". The available setting range differs depending on the output range setting.
Wave pattern start address setting	i_StartingAddr	Double Word	5,000 to 54,999	Set the start address of the wave pattern to be output.
Wave pattern data points setting	i_PointsSetting	Double Word	1 to 50,000 (points)	Set the data points of the wave pattern to be output.
Wave pattern output repetition setting	i_Frequency	Word	-1: Unlimited repetition 1 to 32,767: Specified number of times	Set the output times of the wave pattern.
Constant for wave output conversion cycle	i_ConvSpeed	Word	1 to 5,000	Set the constant to determine the conversion cycle of the wave output.

●Output labels

Name (Comment)	Label name	Data type	Initial value	Description
Execution status	FB_ENO	Bit	OFF	ON: Execution command is ON. OFF: Execution command is OFF.
Completed without error	FB_OK	Bit	OFF	When ON, it indicates that the wave output setting is completed.
Error flag	FB_ERROR	Bit	OFF	When ON, it indicates that an error has occurred.
Error code	ERROR_ID	Word	0	FB error code output.

Item	Description
Number of steps	312 steps (for MELSEC-L series CPU) * The number of steps of the FB in a program depends on the CPU model that is used and input and output definition.
Function description	<ol style="list-style-type: none"> 1) By turning ON FB_EN (Execution command), the A/D conversion data of the A/D conversion channels (CH1 and CH2) is read and the digital input values of the D/A conversion channels (CH3 and CH4) are written. 2) The read A/D conversion data depends on the settings of the input range and the averaging processing function. 3) When the A/D conversion completed flag (XnE) is OFF, the A/D conversion data of channel 1 and channel 2 is not read. 4) The digital input value to be written depends on the output range setting. When the scaling function (D/A conversion) of the L60AD2DA2 is enabled, the digital input value is scaled before the D/A conversion. 5) When the digital output value and digital input value are set in the auto refresh setting of the intelligent function module, this FB is unnecessary.
Compiling method	Macro type
Restrictions and precautions	<ol style="list-style-type: none"> 1) The FB does not include error recovery processing. Program the error recovery processing separately in accordance with the required system operation. 2) The FB cannot be used in an interrupt program. 3) Please ensure that the FB_EN signal is capable of being turned OFF by the program. Do not use this FB in programs that are only executed once such as a subroutine, FOR-NEXT loop because it is impossible to turn OFF. 4) This FB uses index registers Z8 and Z9. Please do not use these index registers in an interrupt program. 5) Every input must be provided with a value for proper FB operation. 6) To operate the L60AD2DA2, set the input range according to the device and system to be connected. Configure the setting in Switch Setting of GX Works2 according to the application. For details on how to use the intelligent function module switch setting, refer to GX Works2 Version 1 Operating Manual (Common).
FB operation type	Real-time execution
Application example	Refer to "Appendix 1. FB Library Application Examples".

Item	Description
Timing chart	<p>[When operation completes without error]</p>  <p>The timing chart illustrates the sequence of events during an update cycle. It shows the following signals and their states:</p> <ul style="list-style-type: none"> FB_EN (Execution command): A pulse that starts the update process. FB_ENO (Execution status): A pulse that occurs during the update process. o_AD_Value_CH (CH A/D conversion data): A signal that is updated during the update process. i_DA_Value_CH (CH Digital input value): A signal that is updated during the update process. FB_OK (Completed without error): A pulse that occurs after the update process is complete. FB_ERROR (Error flag): A signal that is set to 0 during the update process. ERROR_ID (Error code): A signal that is set to 0 during the update process. <p>The update process is divided into three phases: "Update stopped", "During update", and "Update stopped".</p>

Item	Description
Function description	<ol style="list-style-type: none"> 1) By turning ON FB_EN (Execution command), the setting contents of all the channels (CH1 to CH4) are validated. For the applicable setting, refer to MELSEC-L Analog Input/Output Module User's Manual. 2) After FB_EN (Execution command) is turned ON, the execution of this FB continues until each function setting is completed.
Compiling method	Macro type
Restrictions and precautions	<ol style="list-style-type: none"> 1) When this FB is executed while the L60AD2DA2 is being operated, A/D conversion and D/A conversion are stopped. The D/A output before the stop is held. The conversion restarts after FB_OK turns ON. 2) The FB does not include error recovery processing. Program the error recovery processing separately in accordance with the required system operation. 3) Please ensure that the FB_EN signal is capable of being turned OFF by the program. Do not use this FB in programs that are only executed once such as a subroutine, FOR-NEXT loop because it is impossible to turn OFF. 4) The FB cannot be used in an interrupt program. 5) This FB uses index register Z9. Please do not use the index register in an interrupt program. 6) Every input must be provided with a value for proper FB operation. 7) When this FB is used in two or more places, a duplicated coil warning may occur during compile operation due to the Y signal being operated by index modification. However this is not a problem and the FB will operate without error. 8) To operate the L60AD2DA2, set the input range according to the device and system to be connected. Configure the setting in Switch Setting of GX Works2 according to the application. For details on how to use the intelligent function module switch setting, refer to GX Works2 Version 1 Operating Manual (Common).
FB operation type	Pulsed execution (multiple scan execution type)
Application example	Refer to "Appendix 1. FB Library Application Examples".
Timing chart	<p>[When operation completes without error]</p> <p>The timing chart illustrates the sequence of events for the FB when it completes without error. It shows the following signals and their states over time:</p> <ul style="list-style-type: none"> FB_EN (Execution command): A single pulse that initiates the operation. FB_ENO (Execution status): A pulse that occurs immediately after FB_EN is turned ON. Operating condition setting request (Yn9): A pulse that occurs during the execution phase. Operating condition setting completed flag (Xn9): A pulse that occurs at the end of the execution phase. FB_OK (Completed without error): A pulse that occurs immediately after the operating condition setting completed flag (Xn9) is set. FB_ERROR (Error flag): Remains at 0 throughout the entire process. ERROR_ID (Error code): Remains at 0 throughout the entire process.

Programming language	Ladder																	
Number of steps	570 steps (for MELSEC-L series CPU) * The number of steps of the FB in a program depends on the CPU model that is used and input and output definition.																	

Item	Description
Function description	<ol style="list-style-type: none"> 1) By turning ON FB_EN (Execution command), the offset/gain value of the user range setting is read and saved to an SD memory card inserted into the CPU module. 2) FB operation is one-shot only, triggered by the FB_EN signal. 3) The name of the file which this FB creates is "LADA" + "Module start XY address" + ".BIN". [File name example] When the module start XY address is H0120, the file name is "LADA0120.BIN". 4) When a file with the same name exists in the SD memory card, the existing file is replaced with a new BIN file created by this FB. 5) When the SD memory card mounted on the CPU does not have enough capacity or when the number of files to be created exceeds the number of storable files *1, a CPU error *2 occurs. *1 For information on the size of SD memory card and the number of files that can be saved, refer to MELSEC-L CPU Module User's Manual (Hardware Design, Maintenance and Inspection). *2 Setting the operation status of the CPU module (RUN/STOP) when an access error to the SD memory card occurs is available with parameters.
Compiling method	Macro type
Restrictions and precautions	<ol style="list-style-type: none"> 1) The FB does not include error recovery processing. Program the error recovery processing separately in accordance with the required system operation. 2) The FB cannot be used in an interrupt program. 3) Please ensure that the FB_EN signal is capable of being turned OFF by the program. Do not use this FB in programs that are only executed once such as a subroutine, FOR-NEXT loop because it is impossible to turn OFF. 4) This FB uses index register Z9. Please do not use the index register in an interrupt program. 5) Every input must be provided with a value for proper FB operation. 6) Do not use this FB when the CPU module that does not have a SD memory slot is used. Even if used with such a CPU module, this FB does not operate. 7) When this FB is executed while the protect switch of the SD memory card ON, the offset/gain value cannot be saved. FB_ERROR is turned ON and the processing is interrupted. The error code 31 (Decimal) is stored in ERROR_ID. Refer to the error code explanation section for details. 8) When this FB is executed without an SD memory card on the CPU module, FB_ERROR is turned ON and the processing is interrupted. The error code 33 (Decimal) is stored in ERROR_ID.

Item	Description
	<p>Refer to the error code explanation section for details.</p> <p>9) When this FB is executed with SM605 (Memory card remove/insert prohibit flag) OFF, which can be set by sliding the SD memory card disabling switch upward, FB_ERROR is turned ON and the processing is interrupted.</p> <p>The error code 35 (Decimal) is stored in ERROR_ID.</p> <p>Refer to the error code explanation section for details.</p> <p>10) When this FB is executed with SM606 (SD memory card forced disable instruction) ON, SP.FWRITE is not processed and the offset/gain value cannot be read. FB_ERROR is turned ON and the processing is interrupted.</p> <p>The error code 36 (Decimal) is stored in ERROR_ID.</p> <p>Refer to the error code explanation section for details.</p> <p>11) When this FB is executed with the SD memory card accessed by, for example, the data logging function of LCPU, the time for completing this FB may extend or a timeout error (Error code 40 (Decimal)) may occur. For details, refer to Section 13.2.4 Troubleshooting on the entire system during operation of the data logging function of MELSEC-L CPU Module User's Manual (Data Logging Function).</p> <p>12) To operate the L60AD2DA2, set the I/O range according to the device and system to be connected. Configure the setting in Switch Setting of GX Works2 according to the application.</p> <p>For details on how to use the intelligent function module switch setting, refer to GX Works2 Version 1 Operating Manual (Common).</p>
FB operation type	Pulsed execution (multiple scan execution type)
Application example	Refer to "Appendix 1. FB Library Application Examples".
Timing chart	<div style="display: flex; justify-content: space-around;"> <div style="width: 45%;"> <p>[When operation completes without error]</p> </div> <div style="width: 45%;"> <p>[When an error occurs]</p> </div> </div>
Relevant manuals	<ul style="list-style-type: none"> • MELSEC-L Analog Input/Output Module User's Manual • MELSEC-L CPU Module User's Manual (Hardware Design, Maintenance and Inspection) • MELSEC-L CPU Module User's Manual (Data Logging Function) • GX Works2 Version 1 Operating Manual (Common) • GX Works2 Version 1 Operating Manual (Simple Project, Function Block)

Error codes

●Error code list

Error code	Description	Action
31 (Decimal)	No data can be written to the SD memory card because SM601 (Memory card protect flag) is ON (Write prohibited).	Execute the FB again after turning OFF the protect switch of the SD memory card and confirming that SM601 is OFF (Write permitted).
33 (Decimal)	This FB is executed with no SD memory card on the CPU module.	Execute this FB again after mounting the SD memory card to which the target file is saved on the CPU module.
35 (Decimal)	The SD memory card cannot be accessed because SM605 (Memory card remove/insert prohibit flag) is turned OFF.	Execute the FB again after turning ON SM605 (Memory card remove/insert prohibit flag) by sliding the SD memory card disabling switch downward.
36 (Decimal)	SM606 (SD memory card forced disable instruction) is ON, and access to the SD memory card is unavailable.	Execute the FB again after disabling the SD memory card forced disable instruction by turning OFF SM606 and confirming that SM607 (SD memory card use force stop condition flag) is OFF.
40 (Decimal)	The offset/gain value saving processing timeout occurred because accesses to the SD memory card were frequently made in addition to this FB.	Reduce the frequency of the access processing to the SD memory card.

Error codes

●Error code list

Error code	Description	Action
33 (Decimal)	This FB is executed with no SD memory card on the CPU module.	Execute this FB again after mounting the SD memory card to which the target file is saved on the CPU module.
35 (Decimal)	The SD memory card cannot be accessed because SM605 (Memory card remove/insert prohibit flag) is turned OFF.	Execute the FB again after turning ON SM605 (Memory card remove/insert prohibit flag) by sliding the SD memory card disabling switch downward.
36 (Decimal)	SM606 (SD memory card forced disable instruction) is ON, and access to the SD memory card is unavailable.	Execute the FB again after disabling the SD memory card forced disable instruction by turning OFF SM606 and confirming that SM607 (SD memory card use force stop condition flag) is OFF.
40 (Decimal)	The offset/gain value reading processing timeout occurred because accesses to the SD memory card were frequently made in addition to this FB.	Reduce the frequency of the access processing to the SD memory card.
90 (Decimal)	A channel whose A/D conversion is set to "enabled" exists.	Please try again after confirming the setting.

Labels

●Input labels

Name (Comment)	Label name	Data type	Setting range	Description
Execution command	FB_EN	Bit	ON, OFF	ON: The FB is activated. OFF: The FB is not activated.
Module start XY address	i_Start_IO_No	Word	Depends on the I/O point range of the CPU. For details, refer to the CPU user's manual.	Specify the start XY address (in hexadecimal) where the L60AD2DA2 is connected. (For example, enter H10 for X10.)

●Output labels

Name (Comment)	Label name	Data type	Initial value	Description
Execution status	FB_ENO	Bit	OFF	ON: Execution command is ON. OFF: Execution command is OFF.
Completed without error	FB_OK	Bit	OFF	When ON, it indicates that the file save is completed.
Error flag	FB_ERROR	Bit	OFF	When ON, it indicates that an error has occurred.
Error code	ERROR_ID	Word	0	FB error code output.

Item	Description
Function description	<p>1) By turning ON FB_EN (Execution command), the calculation expression data of the free calculation function is read from the serial number access format file register (ZR) and stored in the buffer memory of the analog I/O module.</p> <div data-bbox="443 353 1522 631" data-label="Diagram"> <p>The diagram illustrates the data transfer process. On the left, a yellow box labeled 'Calculation expression data' is situated between file registers ZR(m+0) and ZR(m+281). A bracket indicates this data spans 282 words. A yellow arrow labeled 'M+L60AD2DA2_FreeCalDataStoreDev' points from this data to a yellow box in the 'Buffer memory' section, which also contains 'Calculation expression data' and is located between addresses Un\G50000 and Un\G50281.</p> </div> <p>For the free calculation function, refer to MELSEC-L Analog Input/Output Module User's Manual.</p> <p>2) The read calculation expression data of the free calculation function is validated when the Operating condition setting request signal (Yn9) is turned OFF → ON → OFF or the Operating condition setting request FB (M+L60AD2DA2_RequestSetting) is executed.</p> <p>3) This FB reads the calculation expression data of the free calculation function from ZR (m+0) specified by i_ReadDataAddr (Read start address) and stores them in the buffer memory (Un\G50000 to Un\G50281). To create the calculation expression data to be stored in the file register (ZR), use the "Free calculation function setting" tool of GX Works2.</p> <p>*m: File register (ZR) read start address. Specifying the points to be used in [PC File]*1 and the device points of the file register (ZR) in [Device]*2 can reserve the points of the file register and arrange the data in the desired address.</p> <p>*1 [Parameter] ⇄ [PLC Parameter] ⇄ [PLC File] ⇄ "File Register"</p> <p>*2 [Parameter] ⇄ [PLC Parameter] ⇄ [Device] ⇄ "File Register Extension Setting"</p> <p>4) Reserve 282 file registers (ZR) or more to be used. When this FB is executed with the points specified in i_ReadDataAddr (Read start address) less than 282 points, the available range of the file register (ZR) is exceeded and a CPU error (Error code: 4101) occurs.</p> <p>5) Only when the function selection is set to the "free calculation function" or the "free conversion characteristics function + free calculation function", this FB can be used.</p> <p>6) When the function selection is set to other than the "free calculation function" or the "free conversion characteristics function + free calculation function", FB_ERROR is turned ON and the processing of the FB is interrupted.</p> <p>The error code 60 (Decimal) is stored in ERROR_ID. Refer to the error code explanation section for details.</p>

Item	Description
	<p>7) When FB_EN (Execution command) is turned OFF before the execution of this FB is completed, the processing is interrupted. At that time, the data stored in the buffer memory is not cleared.</p> <p>When the FB is executed again, the reading processing is started from the beginning.</p>
Compiling method	Macro type
Restrictions and precautions	<ol style="list-style-type: none"> 1) This FB requires many scans and takes long time to complete the processing. Therefore, this FB should be executed during the warm up of the L60AD2DA2. 2) The FB does not include error recovery processing. Program the error recovery processing separately in accordance with the required system operation. 3) The FB cannot be used in an interrupt program. 4) Please ensure that the FB_EN signal is capable of being turned OFF by the program. Do not use this FB in programs that are only executed once such as a subroutine, FOR-NEXT loop because it is impossible to turn OFF. 5) This FB uses index registers Z7 to Z9. Please do not use these index registers in an interrupt program. 6) When two or more of these FBs are used, they cannot be used simultaneously. 7) Every input must be provided with a value for proper FB operation. 8) To operate the L60AD2DA2, set the I/O range according to the device and system to be connected. Configure the setting in Switch Setting of GX Works2 according to the application. <p>For details on how to use the intelligent function module switch setting, refer to GX Works2 Version 1 Operating Manual (Common).</p> <p>However, set the I/O range in the free conversion characteristics range setting (Un\G4101) for channels for which the "free calculation function" or the "free conversion characteristics function + free calculation function" is used. Please read the MELSEC-L Analog Input/Output Module User's Manual for the free conversion characteristics range setting (Un\G4101)".</p>
FB operation type	Pulsed execution (multiple scan execution type)
Application example	Refer to "Appendix 1. FB Library Application Examples.

Number of steps	1028 steps (for MELSEC-L series CPU) * The number of steps of the FB in a program depends on the CPU model that is used and input and output definition.																						

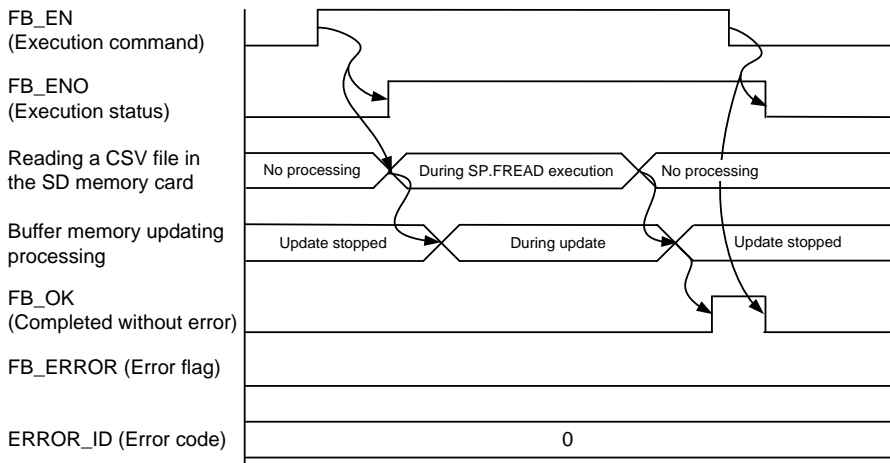

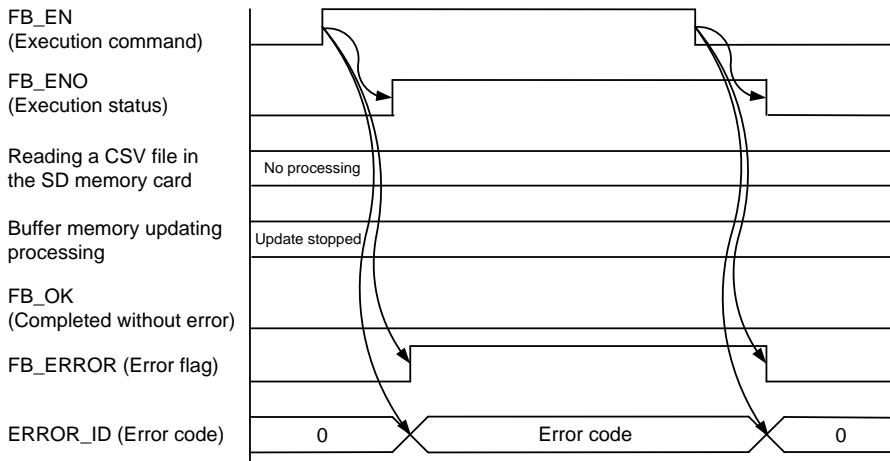

Item	Description
Function description	<p>1) By turning ON FB_EN (Execution command), the parameters and free conversion characteristics table of the free conversion characteristics function is read from the CSV file stored in the SD memory card inserted in the CPU module and stored in the buffer memory of the L60AD2DA2.</p>  <p>The diagram illustrates the data flow process. On the left, a document icon labeled 'CSV file in the SD memory card' and a physical 'SD memory card' (4GB) are shown. A red arrow points from the SD card to the 'CPU module (L26CPU-BT)' in a rack-mounted PLC. The PLC also contains an 'Analog I/O module (L60AD2DA2)'. Two yellow arrows originate from the CSV file: one points to 'UnlG4100' in the 'Buffer memory' section, which contains 'Parameters of the free conversion characteristics function'; the other points to 'UnlG5000' in the 'Free conversion characteristics table' section. The buffer memory address range is shown as 'UnlG37000' at the bottom.</p> <p>For the free conversion characteristics function, refer to MELSEC-L Analog Input/Output Module User's Manual.</p> <p>2) The read parameters of the free conversion characteristics function is validated when the Operating condition setting request signal (Yn9) is turned OFF → ON → OFF or the Operating condition setting request FB (M+L60AD2DA2_RequestSetting) is executed.</p> <p>3) "Table 2 Storage Source "Parameters and Free Conversion Characteristics Table of the Free Conversion Characteristics Function" and Storage Location Buffer Memory" in Appendix 5 lists the "parameters and free conversion characteristics table of the free conversion characteristics function" and the storage location buffer memory address that this FB processes. Describe the parameters and data in the list to a file according to "Appendix 6. CSV File Format for Conversion Characteristics Data Reading FB (CSV File)" and save the file in the root folder (directory) of the SD memory card.</p>

Item	Description
	<p>This FB reads all the parameters of the free conversion characteristics function from the CSV file and stores them in the buffer memory (Un\G4100 and Un\G4101). Then, this FB reads "Free conversion characteristics table" specified in "Number of free conversion characteristics table data points" of the line 100 in the CSV file from the line 101 in order for the number of specified points, and stores them into the Start address (Un\G5000) or later of the free conversion characteristics table registration area of the buffer memory.</p> <p>The CSV file of the free conversion characteristics function can be created easily with the "Create free conversion characteristics table" tool of GX Works2.</p> <p>4) When the CSV file specified by i_FileName (CSV file name) does not exist in the SD memory card inserted to the CPU module, a CPU error (Error code: 2410) occurs.</p> <p>* When the CPU is set to stop at the CPU error occurrence, FB_ERROR and ERROR_ID are not updated. The operation status of the CPU module (RUN/STOP) for when the CPU error occurs can be set in [PLC RAS] *1.</p> <p>*1: [Parameter] ⇄ [PLC Parameter] ⇄ [PLC RAS] ⇄ "File Access Error" in "When There is an Error"</p> <p>5) When FB_EN (Execution command) is turned OFF before the execution of this FB is completed, the processing is interrupted. At that time, the data stored in the buffer memory is not cleared.</p> <p>When the FB is executed again, the reading processing is started from the beginning.</p> <p>6) Only when the function selection is set to the "free conversion characteristics function" or the "free conversion characteristics function + free calculation function", this FB can be used.</p> <p>7) When the function selection is set to other than the "free conversion characteristics function" or the "free conversion characteristics function + free calculation function", FB_ERROR is turned ON and the processing of the FB is interrupted.</p> <p>The error code 60 (Decimal) is stored in ERROR_ID.</p> <p>Refer to the error code explanation section for details.</p> <p>8) Do not remove the SD memory card during the execution of this FB. For the insertion or removal method of the SD memory card, refer to MELSEC-L CPU Module User's Manual (Hardware Design, Maintenance and Inspection).</p>
Compiling method	Macro type

Item	Description
Restrictions and precautions	<ol style="list-style-type: none"> 1) This FB requires many scans and takes long time to complete the processing. Therefore, this FB should be executed during the warm up of the L60AD2DA2. 2) The FB does not include error recovery processing. Program the error recovery processing separately in accordance with the required system operation. 3) The FB cannot be used in an interrupt program. 4) Please ensure that the FB_EN signal is capable of being turned OFF by the program. Do not use this FB in programs that are only executed once such as a subroutine, FOR-NEXT loop because it is impossible to turn OFF. 5) This FB uses index registers Z7 to Z9. Please do not use these index registers in an interrupt program. 6) This FB uses the SP.FREAD command. Thus, when an execution error of the SP.FREAD command occurs, a CPU error occurs. 7) Do not use this FB when the CPU module that does not have a SD memory slot is used. Even if used with such a CPU module, this FB does not operate. 8) When this FB is executed without an SD memory card on the CPU module, FB_ERROR is turned ON and the processing is interrupted. The error code 33 (Decimal) is stored in ERROR_ID. Refer to the error code explanation section for details. 9) When this FB is executed with SM605 (Memory card remove/insert prohibit flag) OFF, which can be set by sliding the SD memory card disabling switch upward, FB_ERROR is turned ON and the processing is interrupted. The error code 35 (Decimal) is stored in ERROR_ID. Refer to the error code explanation section for details. 10) When this FB is executed with SM606 (SD memory card forced disable instruction) ON, SP.FREAD is not processed and the conversion characteristics data cannot be read. FB_ERROR is turned ON and the processing is interrupted. The error code 36 (Decimal) is stored in ERROR_ID. Refer to the error code explanation section for details. 11) When this FB is executed with the SD memory card accessed by, for example, the data logging function of LCPU, the time for completing this FB may extend or a timeout error (Error code 40 (Decimal)) may occur. For details, refer to Section 13.2.4 Troubleshooting on the entire system during operation of the data logging function of MELSEC-L CPU Module User's Manual (Data Logging Function). 12) When two or more of these FBs are used, they cannot be used simultaneously. 13) Every input must be provided with a value for proper FB operation.

Item	Description
	<p>14) To operate the L60AD2DA2, set the I/O range according to the device and system to be connected. Configure the setting in Switch Setting of GX Works2 according to the application.</p> <p>For details on how to use the intelligent function module switch setting, refer to GX Works2 Version 1 Operating Manual (Common).</p> <p>However, set the I/O range in the free conversion characteristics range setting (Un\G4101) for channels for which the "free calculation function" or the "free conversion characteristics function + free calculation function" is used.</p> <p>Please read the MELSEC-L Analog Input/Output Module User's Manual for the free conversion characteristics range setting (Un\G4101)".</p>
FB operation type	Pulsed execution (multiple scan execution type)
Application example	Refer to "Appendix 1. FB Library Application Examples".
Timing chart	<p>[When operation completes without error]</p>  <p>[When an error occurs]</p> 

Item	Description
Relevant manuals	<ul style="list-style-type: none">• MELSEC-L Analog Input/Output Module User's Manual• MELSEC-L CPU Module User's Manual (Hardware Design, Maintenance and Inspection)• MELSEC-L CPU Module User's Manual (Data Logging Function)• GX Works2 Version 1 Operating Manual (Common)• GX Works2 Version 1 Operating Manual (Simple Project, Function Block)

Error codes

●Error code list

Error code	Description	Action
33 (Decimal)	This FB is executed with no SD memory card on the CPU module.	Execute this FB again after mounting the SD memory card to which the target CSV file is saved on the CPU module. Or execute this FB again after inserting the available SD memory card and saving the target CSV file to the SD memory card using "Write PLC User Data" of GX Works2.
35 (Decimal)	The SD memory card cannot be accessed because SM605 (Memory card remove/insert prohibit flag) is turned OFF.	Execute the FB again after turning ON SM605 (Memory card remove/insert prohibit flag) by sliding the SD memory card disabling switch downward.
36 (Decimal)	SM606 (SD memory card forced disable instruction) is ON, and access to the SD memory card is unavailable.	Execute the FB again after disabling the SD memory card forced disable instruction by turning OFF SM606 and confirming that SM607 (SD memory card use force stop condition flag) is OFF.
40 (Decimal)	The conversion characteristics data reading processing timeout occurred because accesses to the SD memory card were frequently made in addition to this FB.	Reduce the frequency of the access processing to the SD memory card.
60 (Decimal)	The function selection of Switch 4 of the intelligent function module switch setting of the target module is set to other than the "free conversion characteristics function" or the "free conversion characteristics function + free calculation function".	Set the function selection of Switch 4 of the intelligent function module switch setting of the target module to the "free conversion characteristics function" or the "free conversion characteristics function + free calculation function", and execute the FB again.
Error codes other than above	The error code of the CPU module	For details on the caused error code, refer to Appendix 1 Error Code Lists of MELSEC-L CPU Module User's Manual (Hardware Design, Maintenance and Inspection).

Labels

●Input labels

Name (Comment)	Label name	Data type	Setting range	Description
Execution command	FB_EN	Bit	ON, OFF	ON: The FB is activated. OFF: The FB is not activated.
Module start XY address	i_Start_IO_No	Word	Depends on the I/O point range of the CPU. For details, refer to the CPU user's manual.	Specify the start XY address (in hexadecimal) where the L60AD2DA2 is connected. (For example, enter H10 for X10.)
CSV file name	i_FileName	Character string	12 characters or less	Specify the name of the CSV file in which the parameters and the free conversion characteristics table of the free conversion characteristics function are stored. (Only CSV is valid for a file attribute.) For details of the CSV file format, refer to "Appendix 6. CSV File Format for Conversion Characteristics Data Reading FB (CSV File).

●Output labels

Name (Comment)	Label name	Data type	Initial value	Description
Execution status	FB_ENO	Bit	OFF	ON: Execution command is ON. OFF: Execution command is OFF.
Completed without error	FB_OK	Bit	OFF	When ON, it indicates that writing the parameters and free conversion characteristics table of the free conversion characteristics function in the CSV file to the buffer memory of the L60AD2DA2 is completed.
Error flag	FB_ERROR	Bit	OFF	When ON, it indicates that an error has occurred.
Error code	ERROR_ID	Word	0	FB error code output.

Item	Description
Function description	<p>1) By turning ON FB_EN (Execution command), the parameters and free conversion characteristics table of the free conversion characteristics function are read from the serial number access format file register (ZR) and stored in the buffer memory of the analog I/O module.</p>  <p>The diagram illustrates the data flow from the File register (ZR) to the Buffer memory. The File register is divided into three sections: 'Parameters of the free conversion characteristics function' (2 words, starting at ZR(m+0)), a '(Blank)' area (96 words, starting at ZR(m+98)), and 'Number of free conversion characteristics table data points' (2 words, starting at ZR(m+100)). The 'Free conversion characteristics table' (Max. 32001 points) starts at ZR(m+100) and ends at ZR(m+32100). The Buffer memory (Un\G4100) stores the 'Parameters of the free conversion characteristics function' and the 'Free conversion characteristics table' (Max. 32001 points). The table is identified as M+L60AD2DA2_FreeConvDataStoreDev. The Buffer memory address for the table is Un\G5000 and Un\G37000.</p> <p>For the free conversion characteristics function, refer to MELSEC-L Analog Input/Output Module User's Manual.</p> <p>2) The read parameters of the free conversion characteristics function is validated when the Operating condition setting request signal (Yn9) is turned OFF → ON → OFF or the Operating condition setting request FB (M+L60AD2DA2_RequestSetting) is executed.</p> <p>3) "Table 2 Storage Source "Parameters and Free Conversion Characteristics Table of the Free Conversion Characteristics Function" and Storage Location Buffer Memory" in Appendix 5. lists "parameters and data of the free conversion characteristics function" and the storage location buffer memory address that this FB processes. Save the parameter and the data in the file register (ZR) described in "Storage source" in the table.</p> <p>This FB reads the parameters of the free conversion characteristics function from ZR (m+0) specified by i_ReadDataAddr (read start address) and stores them in the buffer memory (Un\G4100 and Un\G4101).</p>

Item	Description
	<p>Then, this FB reads "Free conversion characteristics table" of specified points specified in "Number of free conversion characteristics table data points" of ZR (m+98, 99) from ZR (m+100) in order, and stores them into the Start address (Un\G5000) or later of the free conversion characteristics table registration area the buffer memory.</p> <p>The file register (ZR) data of the free conversion characteristics function can be created easily with the "Create free conversion characteristics table" tool of GX Works2.</p> <p>*m: File register (ZR) read start address. Specifying the points to be used in [PC File]*1 and the device points of the file register (ZR) in [Device]*2 can reserve the points of the file register and arrange the data in the desired address.</p> <p>*1 [Parameter] ⇔ [PLC Parameter] ⇔ [PLC File] ⇔ "File Register"</p> <p>*2 [Parameter] ⇔ [PLC Parameter] ⇔ [Device] ⇔ "File Register Extension Setting"</p> <p>4) Reserve "Number of free conversion characteristics table data points" +100 points or more for the file register (ZR) to be used. When this FB is executed with the points specified in i_ReadDataAddr (Read start address) less than "Number of free conversion characteristics table data points" +100 of ZR (m+98, 99), the available range of the file register (ZR) is exceeded and a CPU error (Error code: 4101) occurs.</p> <p>5) Only when the function selection is set to the "free conversion characteristics function" or the "free conversion characteristics function + free calculation function", this FB can be used.</p> <p>6) When the function selection is set to other than the "free conversion characteristics function" or the "free conversion characteristics function + free calculation function", FB_ERROR is turned ON and the processing of the FB is interrupted.</p> <p>The error code 60 (Decimal) is stored in ERROR_ID.</p> <p>Refer to the error code explanation section for details.</p> <p>7) When FB_EN (Execution command) is turned OFF before the execution of this FB is completed, the processing is interrupted. At that time, the data stored in the buffer memory is not cleared.</p> <p>When the FB is executed again, the reading processing is started from the beginning.</p>
Compiling method	Macro type

Item	Description		
Restrictions and precautions	<ol style="list-style-type: none"> 1) This FB requires many scans and takes long time to complete the processing. Therefore, this FB should be executed during the warm up of the L60AD2DA2. 2) The FB does not include error recovery processing. Program the error recovery processing separately in accordance with the required system operation. 3) The FB cannot be used in an interrupt program. 4) Please ensure that the FB_EN signal is capable of being turned OFF by the program. Do not use this FB in programs that are only executed once such as a subroutine, FOR-NEXT loop because it is impossible to turn OFF. 5) This FB uses index registers Z7 to Z9. Please do not use these index registers in an interrupt program. 6) When two or more of these FBs are used, they cannot be used simultaneously. 7) Every input must be provided with a value for proper FB operation. 8) To operate the L60AD2DA2, set the I/O range according to the device and system to be connected. Configure the setting in Switch Setting of GX Works2 according to the application. <p>For details on how to use the intelligent function module switch setting, refer to GX Works2 Version 1 Operating Manual (Common).</p> <p>However, set the I/O range in the free conversion characteristics range setting (Un\G4101) for channels for which the "free calculation function" or the "free conversion characteristics function + free calculation function" is used.</p> <p>Please read the MELSEC-L Analog Input/Output Module User's Manual for the free conversion characteristics range setting (Un\G4101)".</p>		
FB operation type	Pulsed execution (multiple scan execution type)		
Application example	Refer to "Appendix 1. FB Library Application Examples".

Error codes

●Error code list

Error code	Description	Action
60 (Decimal)	The function selection of Switch 4 of the intelligent function module switch setting of the target module is set to other than the "free conversion characteristics function" or the "free conversion characteristics function + free calculation function".	Set the function selection of Switch 4 of the intelligent function module switch setting of the target module to the "free conversion characteristics function" or the "free conversion characteristics function + free calculation function", and execute the FB again.

Labels

●Input labels

Name (Comment)	Label name	Data type	Setting range	Description
Execution command	FB_EN	Bit	ON, OFF	ON: The FB is activated. OFF: The FB is not activated.
Module start XY address	i_Start_IO_No	Word	Depends on the I/O point range of the CPU. For details, refer to the CPU user's manual.	Specify the start XY address (in hexadecimal) where the L60AD2DA2 is connected. (For example, enter H10 for X10.)
Read start address	i_ReadDataAddr	Double Word	Effective device range	Specify the start address of the file register (ZR) in which the parameters and the conversion characteristics data of the free conversion characteristics function are stored.

●Output labels

Name (Comment)	Label name	Data type	Initial value	Description
Execution status	FB_ENO	Bit	OFF	ON: Execution command is ON. OFF: Execution command is OFF.
Completed without error	FB_OK	Bit	OFF	When ON, it indicates that writing the parameters and the conversion characteristics data of the free conversion characteristics function in the file register (ZR) to the buffer memory of the module is completed.
Error flag	FB_ERROR	Bit	OFF	Always OFF
Error code	ERROR_ID	Word	0	Always 0

FB Version Upgrade History

Version	Date	Description
1.00A	2015/04/03	First edition

Note

This chapter includes information related to the function block.

It does not include information on restrictions of use such as combination with modules or programmable controller CPUs.

Please make sure to read user's manuals for the corresponding products before using the products.

Appendix 1. FB Library Application Examples

L60AD2DA2 FB application examples are as follows.

1) System configuration

Reminder

- Every input must be provided with a value for proper FB operation. If not set, the values will be unspecified.
- Abbreviations may be used in the label comments due to the limitation on the number of the characters to display in GX Works2.

2) Global label setting

None

3) Application example settings

a) Common setting

Input and output item	Value	Description
Module start XY address	0	Specify the start XY address where the L60AD2DA2 is connected.

1) List of devices

a) External input (commands)

Device	FB name	Application (ON details)
M0	M+L60AD2DA2_AD_ReadADVal	A/D value reading request
M10	M+L60AD2DA2_AD_ReadAllADVal	A/D value read req. (all CHs)
M20	M+L60AD2DA2_AD_ReadScalingVal	Scaling value reading request
M30	M+L60AD2DA2_AD_ReadAllScalingVal	Scaling val read req. (all CHs)
M40	M+L60AD2DA2_AD_SetADConversion	A/D conv enable/disable set req.
M41		A/D conv enabl:ON/disabl:OFF set
M50	M+L60AD2DA2_AD_SetAverage	Averaging proc setting request
M60	M+L60AD2DA2_AD_SetScaling	A/D conversion scaling set req.
M61		A/D conv scaling enab/disab set
M70	M+L60AD2DA2_AD_SetInputSignalErr	Input signal error setting req.
M80	M+L60AD2DA2_AD_SetOffsetVal	A/D conv offset setting request
M81		A/D conv offset value write req.
M90	M+L60AD2DA2_AD_SetGainVal	A/D conv gain setting request
M91		A/D conv gain value write req.
M100	M+L60AD2DA2_AD_ShiftOperation	A/D conv shift operation req.
D100		Digital value
M110	M+L60AD2DA2_AD_DiffOperation	Difference conversion request
D110		Digital value
M120	M+L60AD2DA2_AD_DigitalClipOperation	Digital clipping request
D120		Digital value
M130	M+L60AD2DA2_AD_SetLoggingPARAM	Logging fnc param setting req.
M131		Log fnc enabl:ON/disabl:OFF set
M140	M+L60AD2DA2_AD_SaveLogging	Logging data save request
M141		Log file ovr enable/disable set
M142		Logging forced save command

b) External output (checks)

Device	FB name	Application (ON details)
M1	M+L60AD2DA2_AD_ReadADVal	A/D value reading FB ready
M2		A/D value reading complete
F0		A/D value reading FB error
D0		A/D conversion data
D1		A/D value reading FB error code
M11	M+L60AD2DA2_AD_ReadAllADVal	A/D value read FB rdy. (all CHs)
M12		A/D value read comp. (all CHs)
D10		CH1 A/D conversion data
D11		CH2 A/D conversion data
M21	M+L60AD2DA2_AD_ReadScalingVal	Scaling value reading FB ready
M22		Scaling value reading complete
F5		Scaling value reading FB error
D20		Scaling value
D21		Scaling value read FB error code
M31	M+L60AD2DA2_AD_ReadAllScalingVal	Scaling val read rdy. (all CHs)
M32		Scaling val read comp. (all CHs)
D30		CH1 Scaling value
D31		CH2 Scaling value
M41	M+L60AD2DA2_AD_SetADConversion	A/D conv enabl:ON/disabl:OFF set
M42		A/D conv enable/disable FB ready
F10		A/D conv enable/disable FB error
D40		A/D enable/disable FB error code
M51	M+L60AD2DA2_AD_SetAverage	Averaging proc setting FB ready
M52		Averaging proc setting complete
F15		Averaging proc setting FB error
D50		Averaging proc set FB error code
M62	M+L60AD2DA2_AD_SetScaling	A/D conv scaling setting FB rdy.
M63		A/D conv scaling req. complete
F20		A/D conv scaling setting FB err
D60		A/D conv scaling set FB err code
M71	M+L60AD2DA2_AD_SetInputSignalErr	Input signal error setting ready
M72		Input signal error setting comp.
F25		Input signal err setting FB err
D70		Input signal err set FB err code
M82	M+L60AD2DA2_AD_SetOffsetVal	A/D conv offset setting FB ready

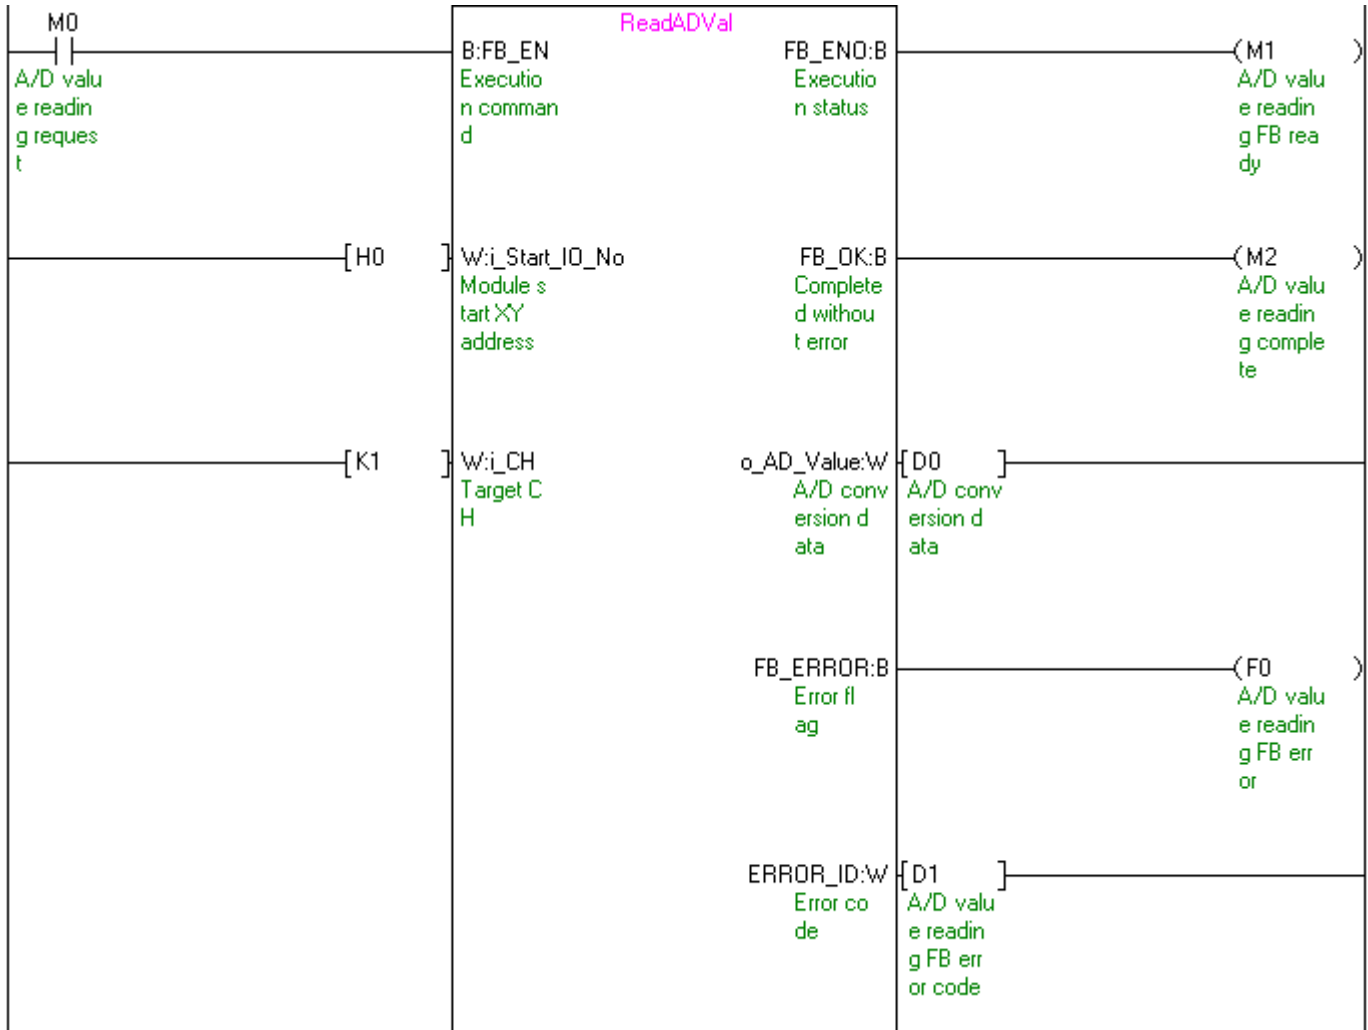

Device	FB name	Application (ON details)
M83		A/D conv offset setting comp.
F30		A/D conv offset setting FB error
D80		A/D conv offset set FB err code
M92	M+L60AD2DA2_AD_SetGainVal	A/D conv gain setting FB ready
M93		A/D conv gain setting complete
F35		A/D conv gain setting FB error
D90		A/D conv gain set FB error code
M101	M+L60AD2DA2_AD_ShiftOperation	A/D conv shift operation FB rdy.
M102		A/D conv shift operation comp.
D101		A/D conv shift conversion value
M111	M+L60AD2DA2_AD_DiffOperation	Difference conversion FB ready
M112		Difference conversion complete
D111		Difference conversion value
D112		Difference conv reference value
M121	M+L60AD2DA2_AD_DigitalClipOperation	Digital clipping FB ready
M122		Digital clipping complete
F40		Digital clipping FB error
D121		Digital output value
D122		Digital clipping FB error code
M132	M+L60AD2DA2_AD_SetLoggingPARAM	Logging func param set FB ready
M133		Logging fnc param set complete
F45		Logging fnc param setting FB err
D130		Log fnc param set FB err code
M143	M+L60AD2DA2_AD_SaveLogging	Logging data save FB ready
M144		Logging data save complete
M145		Logging data saving
M146		Logging file max No. reached
F50		Logging data save FB error
D140		Logging data save FB error code

M+L60AD2DA2_AD_ReadADVal (Read A/D conversion data)

Label name	Setting value	Description
i_Start_IO_No	H0	Set the start XY address where the L60AD2DA2 is connected to 0H.
i_CH	K1	Set the target channel to channel 1.

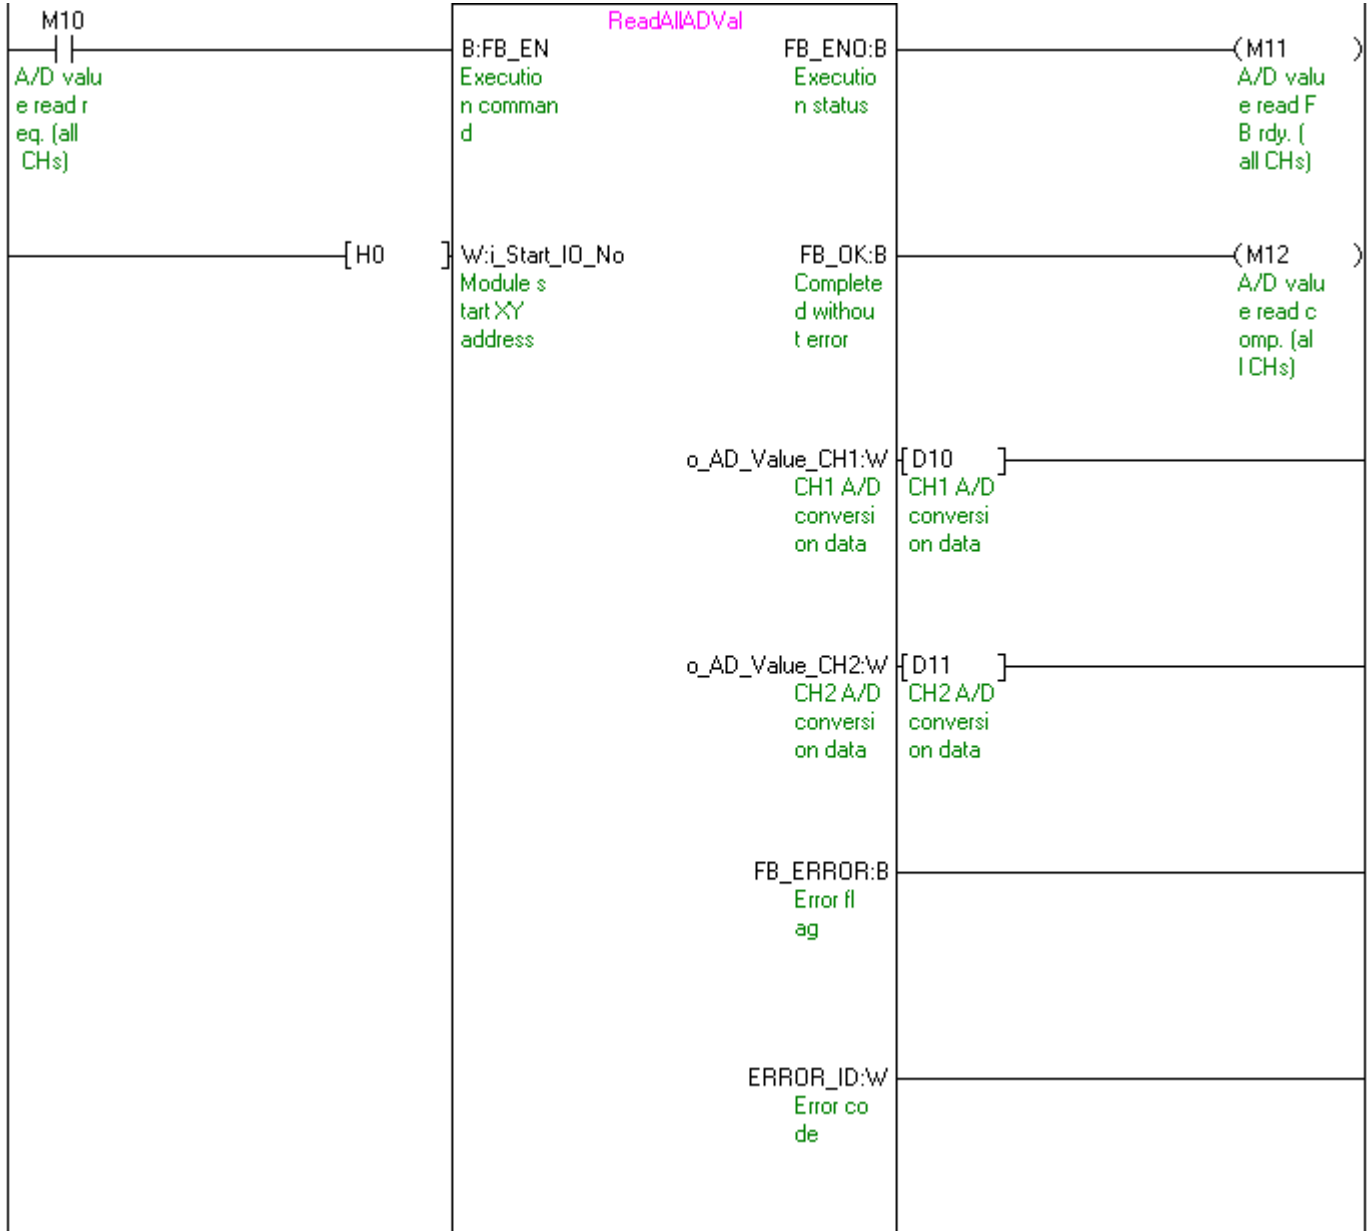

By turning ON M0, the A/D conversion data of channel 1 is read.

M+L60AD2DA2_AD_ReadAllADVal (Read A/D conversion data (all CHs))

Label name	Setting value	Description
i_Start_IO_No	H0	Set the start XY address where the L60AD2DA2 is connected to 0H.

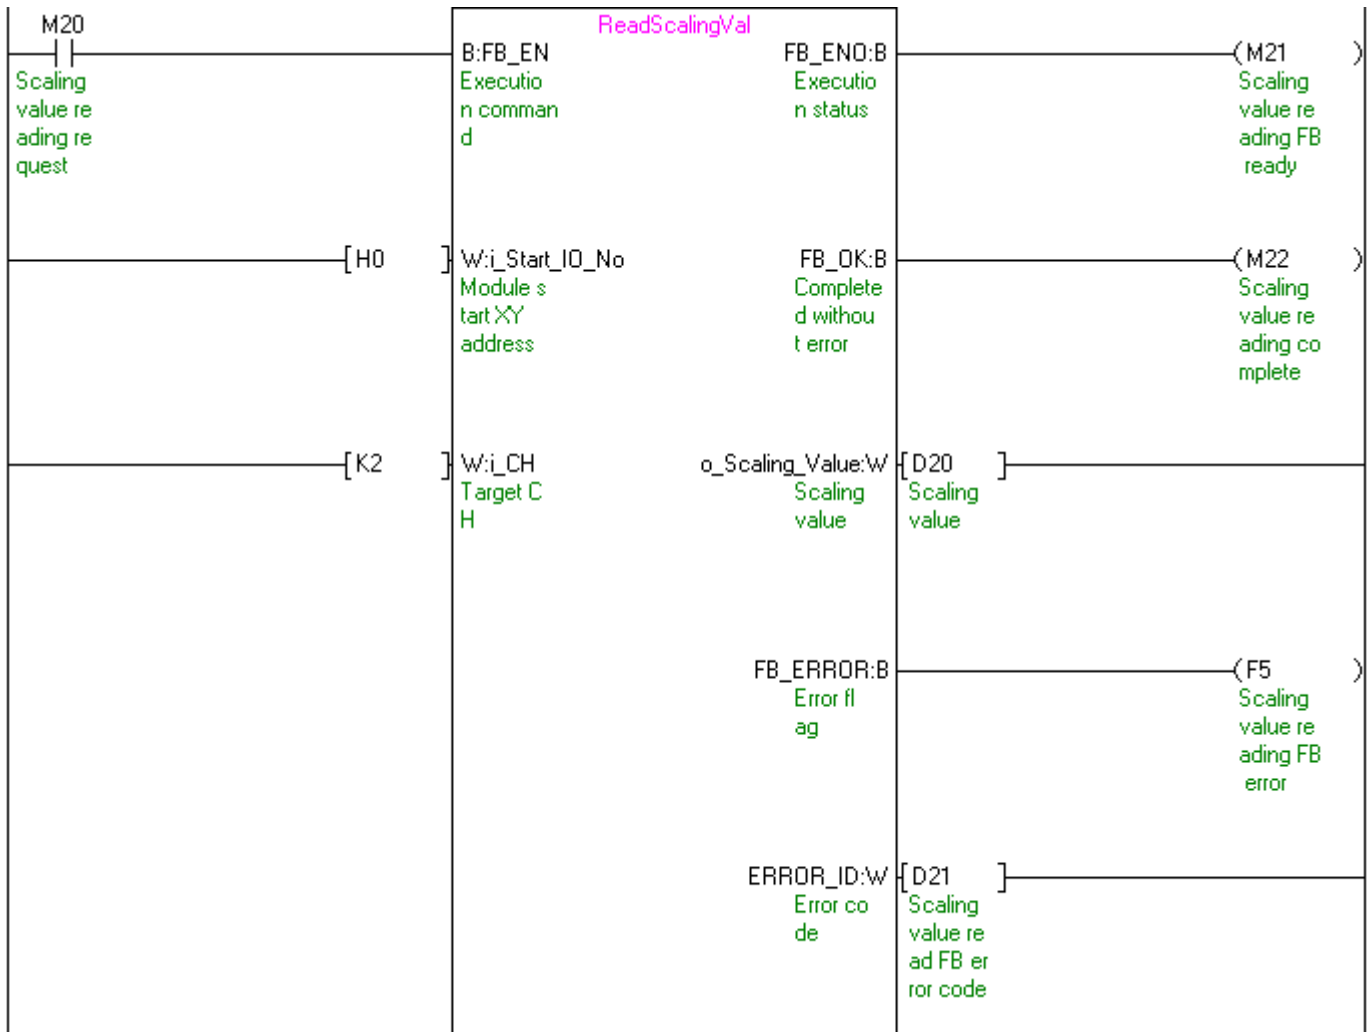

By turning ON M10, the A/D conversion data of the A/D conversion channels (CH1 and CH2) is read.

M+L60AD2DA2_AD_ReadScalingVal (Read A/D conversion scaling value)

Label name	Setting value	Description
i_Start_IO_No	H0	Set the start XY address where the L60AD2DA2 is connected to 0H.
i_CH	K2	Set the target channel to channel 2.

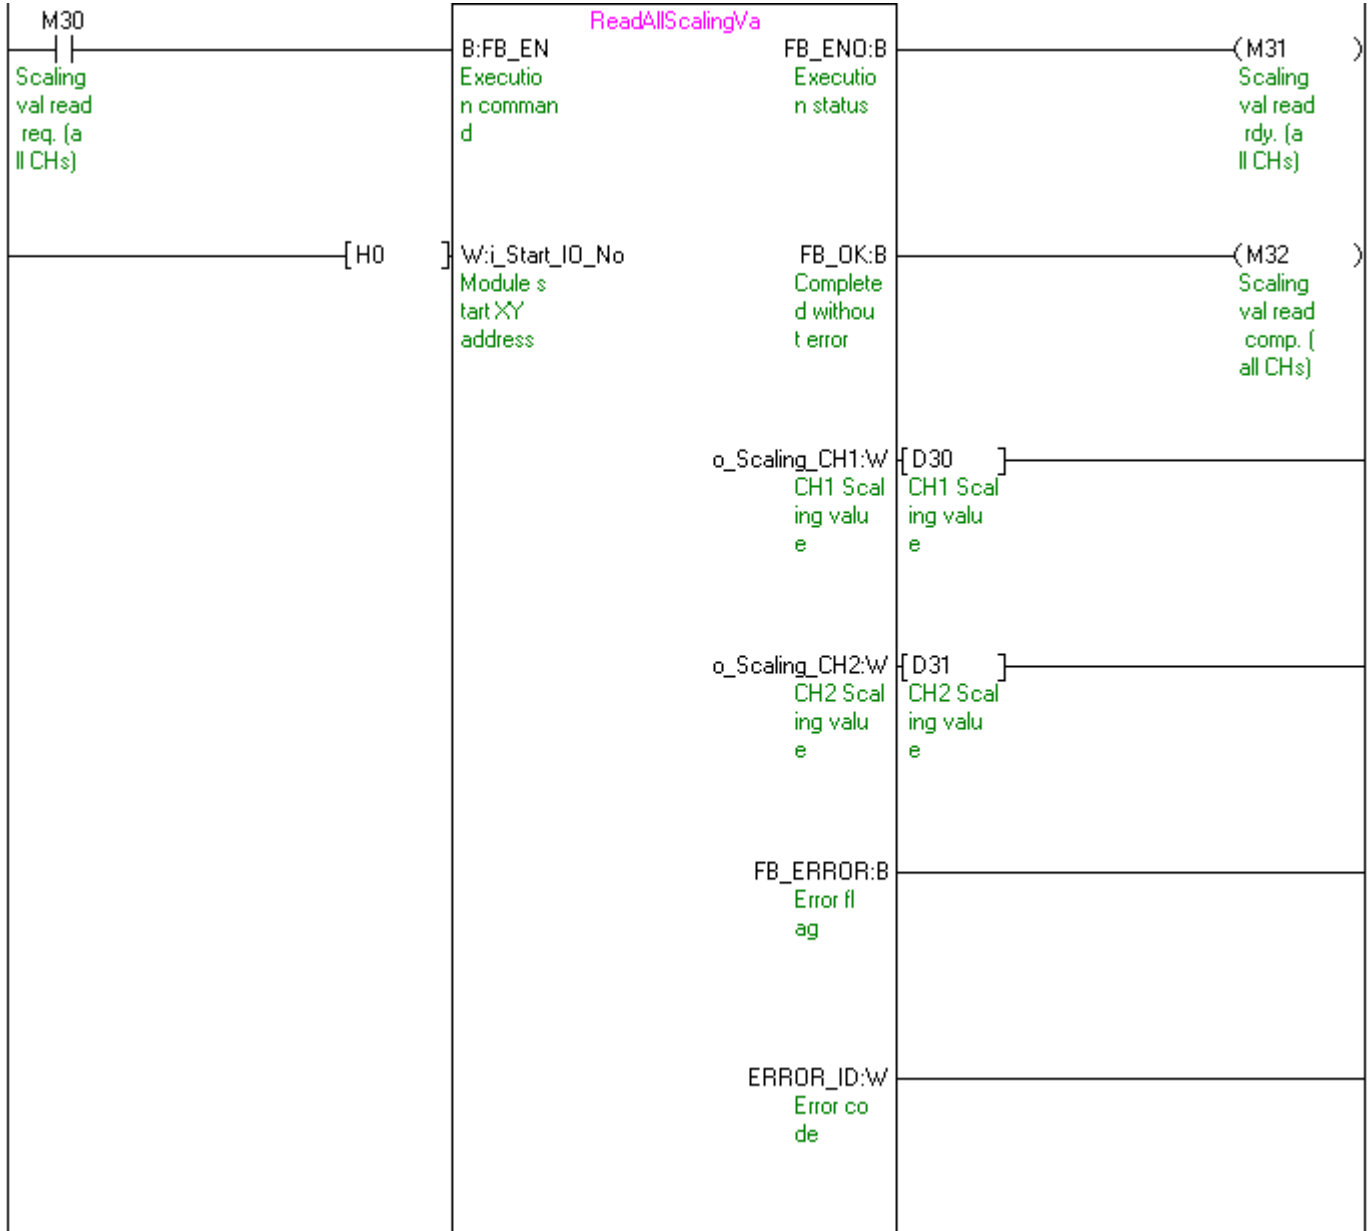

By turning ON M20, the scaling value of channel 2 is read.

M+L60AD2DA2_AD_ReadAllScalingVal (Read A/D conversion scaling value (all CHs))

Label name	Setting value	Description
i_Start_IO_No	H0	Set the start XY address where the L60AD2DA2 is connected to 0H.

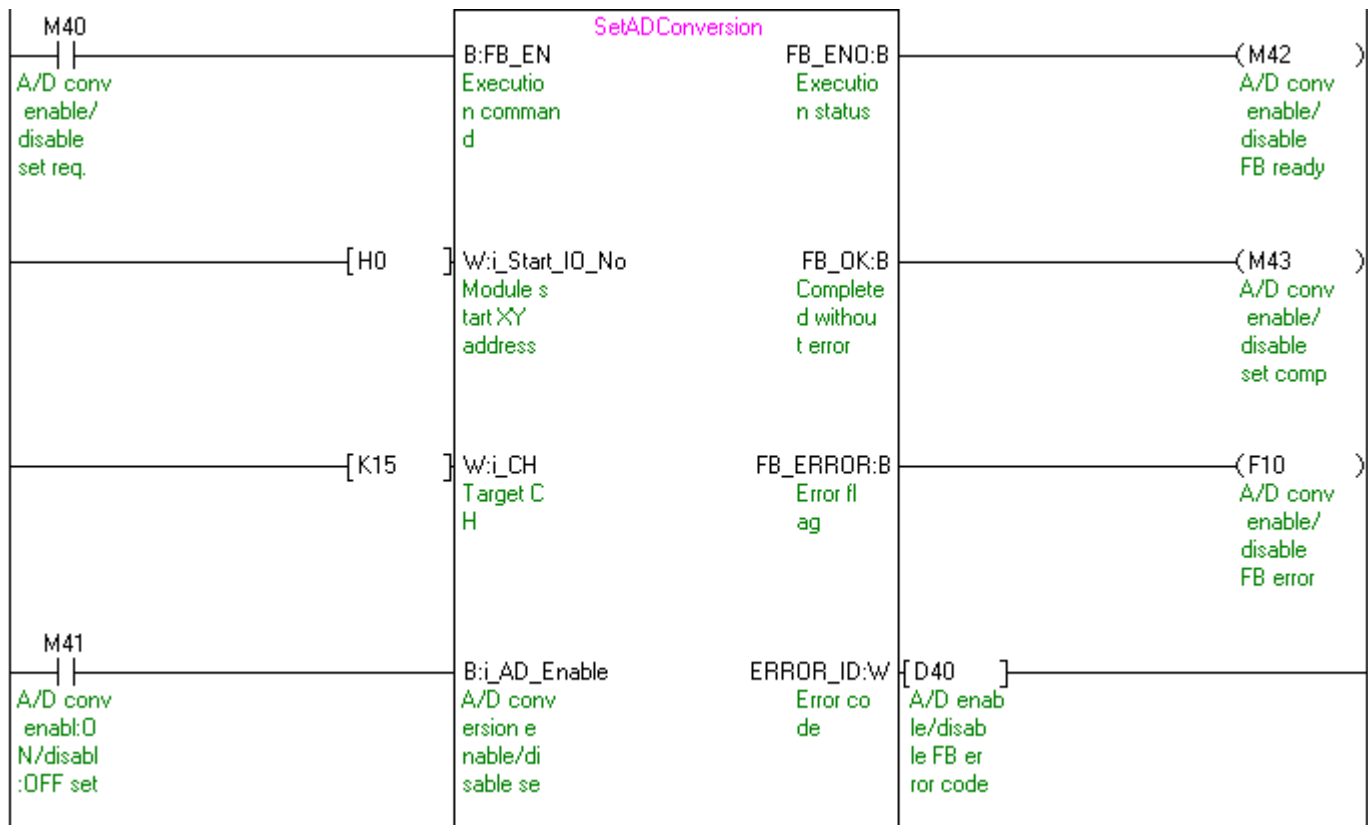

By turning ON M30, the scaling values of the A/D conversion channels (CH1 and CH2) are read.

M+L60AD2DA2_AD_SetADConversion (A/D conversion enable/disable setting)

Label name	Setting value	Description
i_Start_IO_No	H0	Set the start XY address where the L60AD2DA2 is connected to 0H.
i_CH	K15	Set the target channel to channel 1 and 2.
i_AD_Enable	ON/OFF	Turn ON to enable the A/D conversion of the target channel.

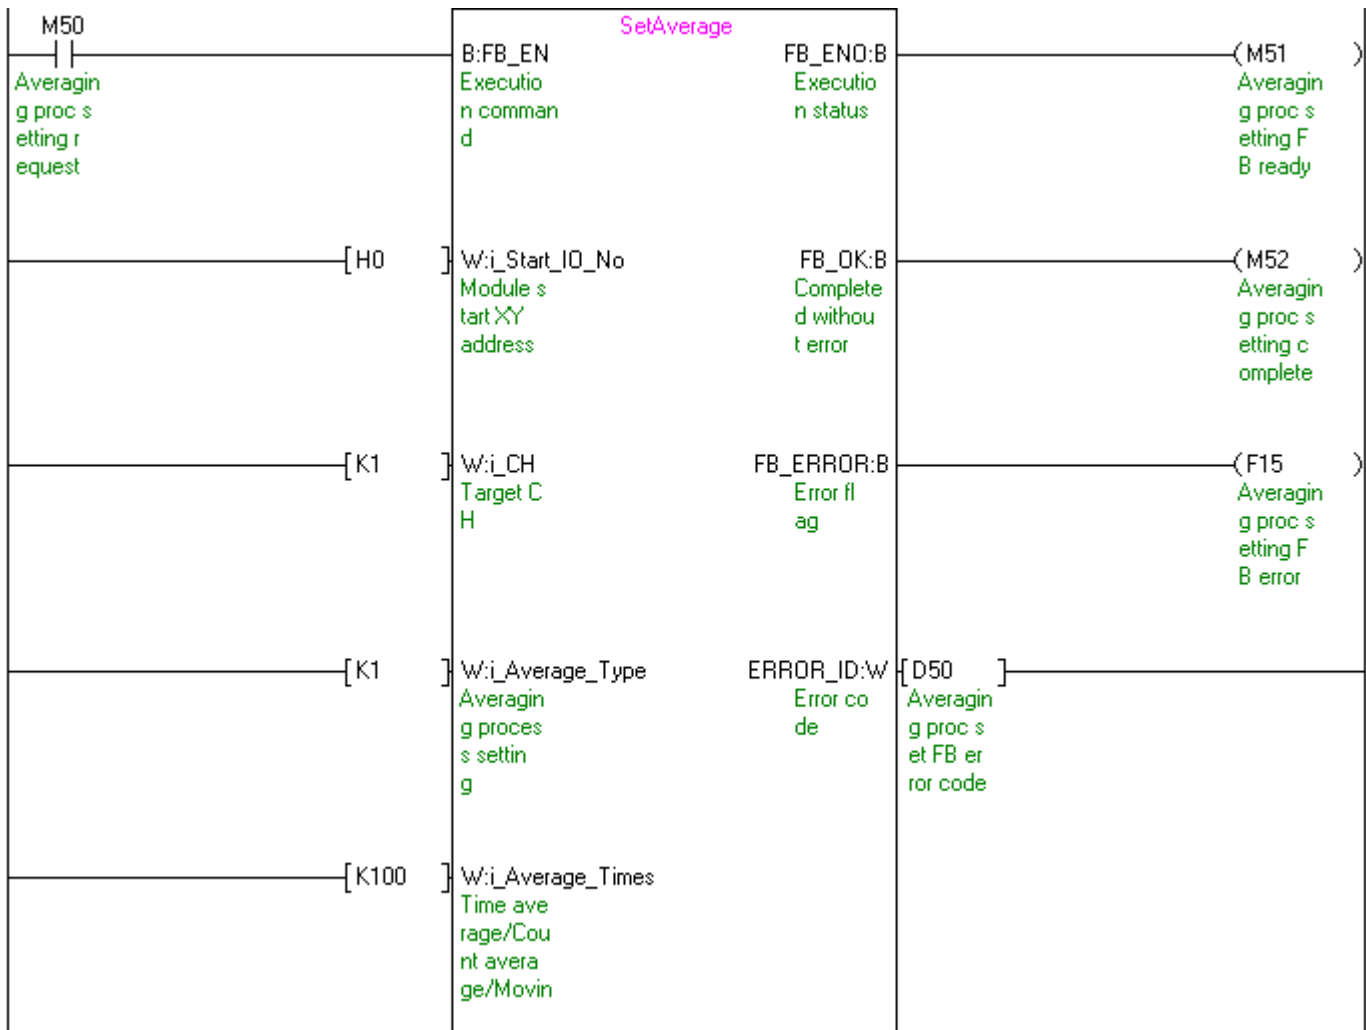

By turning ON M40, the values for the A/D conversion enable/disable setting of the A/D conversion channels (CH1 and CH2) are written to the buffer memory.

M+L60AD2DA2_AD_SetAverage (A/D conversion averaging process setting)

Label name	Setting value	Description
i_Start_IO_No	H0	Set the start XY address where the L60AD2DA2 is connected to 0H.
i_CH	K1	Set the target channel to channel 1.
i_Average_Type	K1	Set the averaging processing type to "Time average".
i_Average_Times	K100	Set the time average to 100.

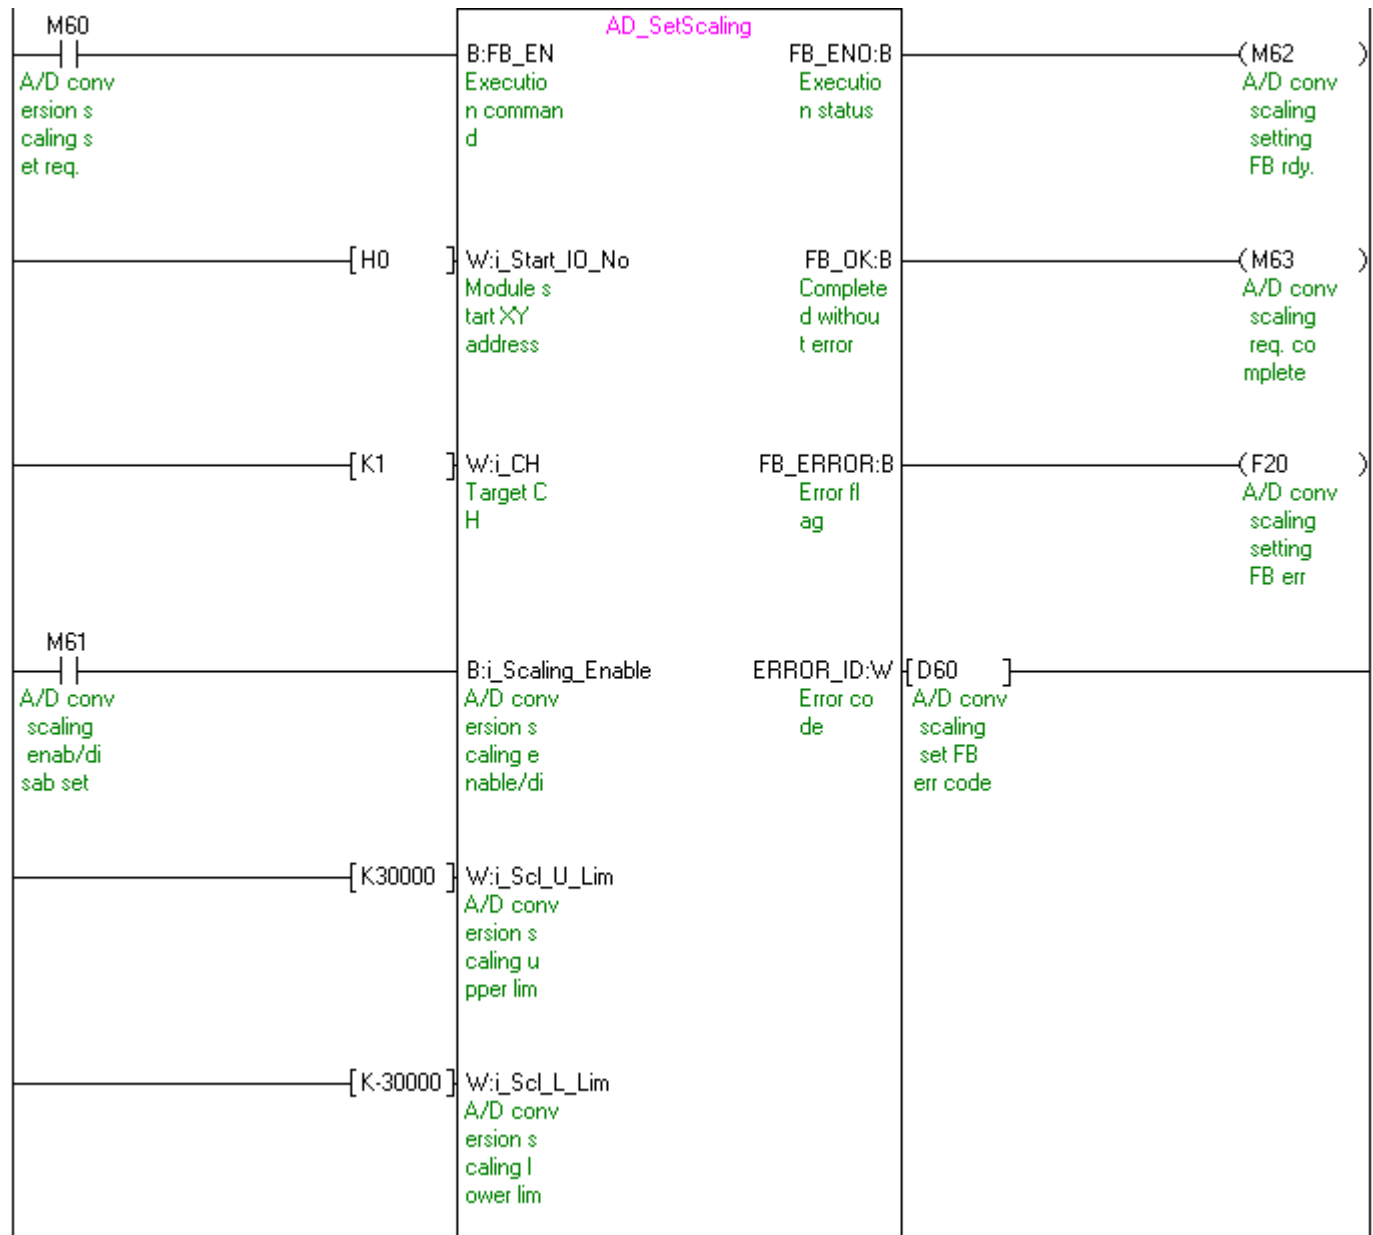

By turning ON M50, the value for the averaging processing type setting of channel 1 is written to the buffer memory.

M+L60AD2DA2_AD_SetScaling (A/D conversion scaling setting)

Label name	Setting value	Description
i_Start_IO_No	H0	Set the start XY address where the L60AD2DA2 is connected to 0H.
i_CH	K1	Set the target channel to channel 1.
i_Scaling_Enable	ON/OFF	Turn ON to enable the scaling.
i_Scl_U_Lim	K30000	Set the scaling upper limit value to 30,000.
i_Scl_L_Lim	K-30000	Set the scaling lower limit value to -30,000.

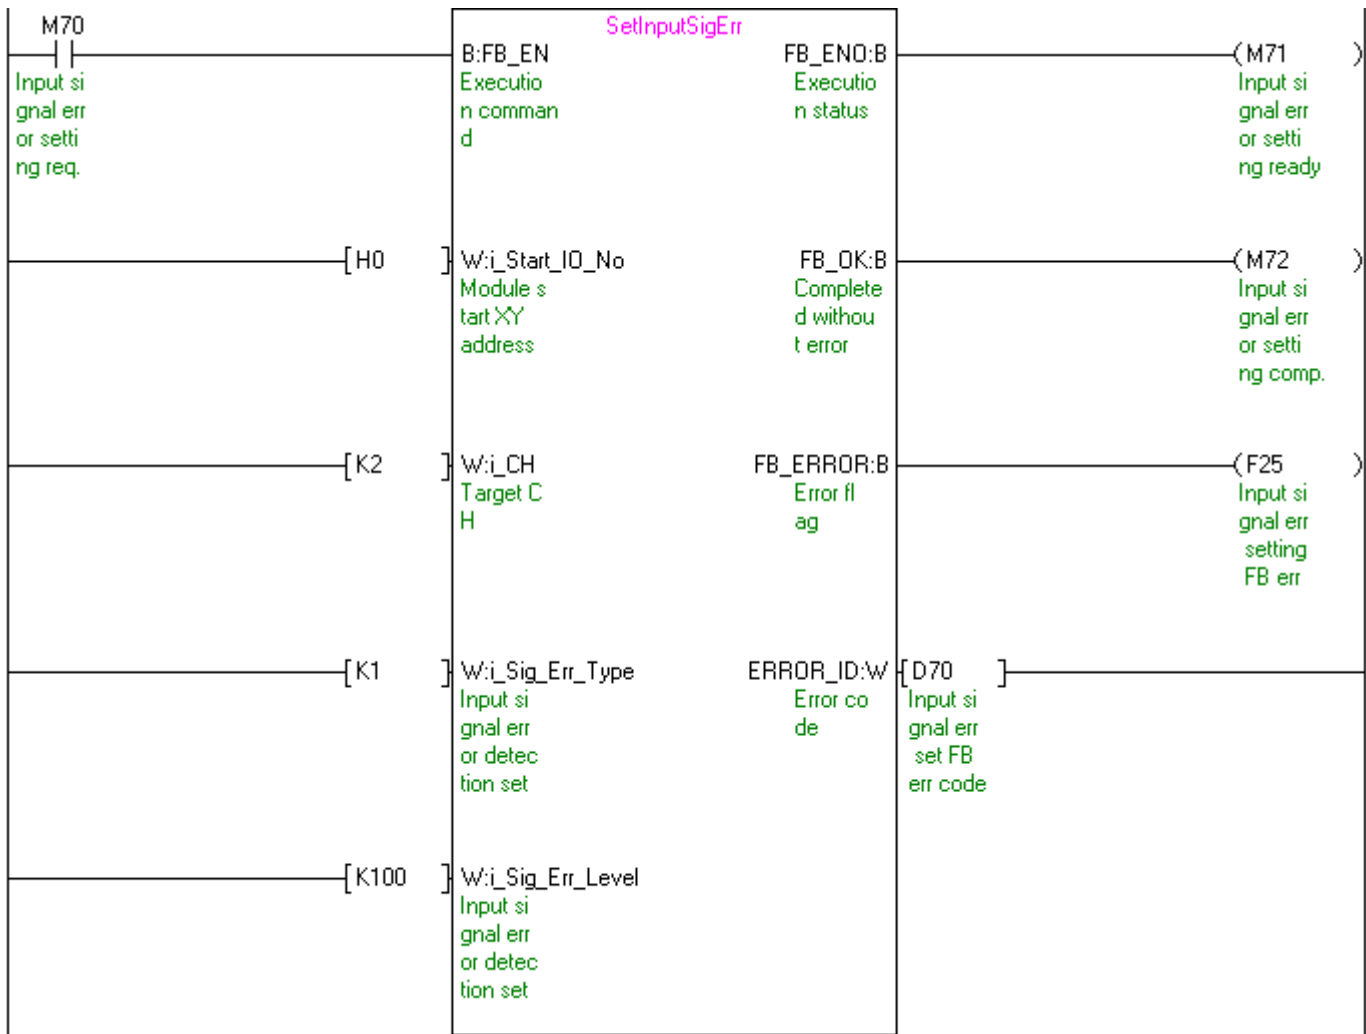

By turning ON M60, the value for the scaling setting of channel 2 is written to the buffer memory.

M+L60AD2DA2_AD_SetInputSignalErr (A/D conversion input signal error detection setting)

Label name	Setting value	Description
i_Start_IO_No	H0	Set the start XY address where the L60AD2DA2 is connected to 0H.
i_CH	K2	Set the target channel to channel 2.
i_Sig_Err_Type	K1	Set the input signal error detection setting of channel 2 to "Upper lower limit detection".
i_Sig_Err_Level	K100	Set the value for the input signal error detection setting to 10.0%.

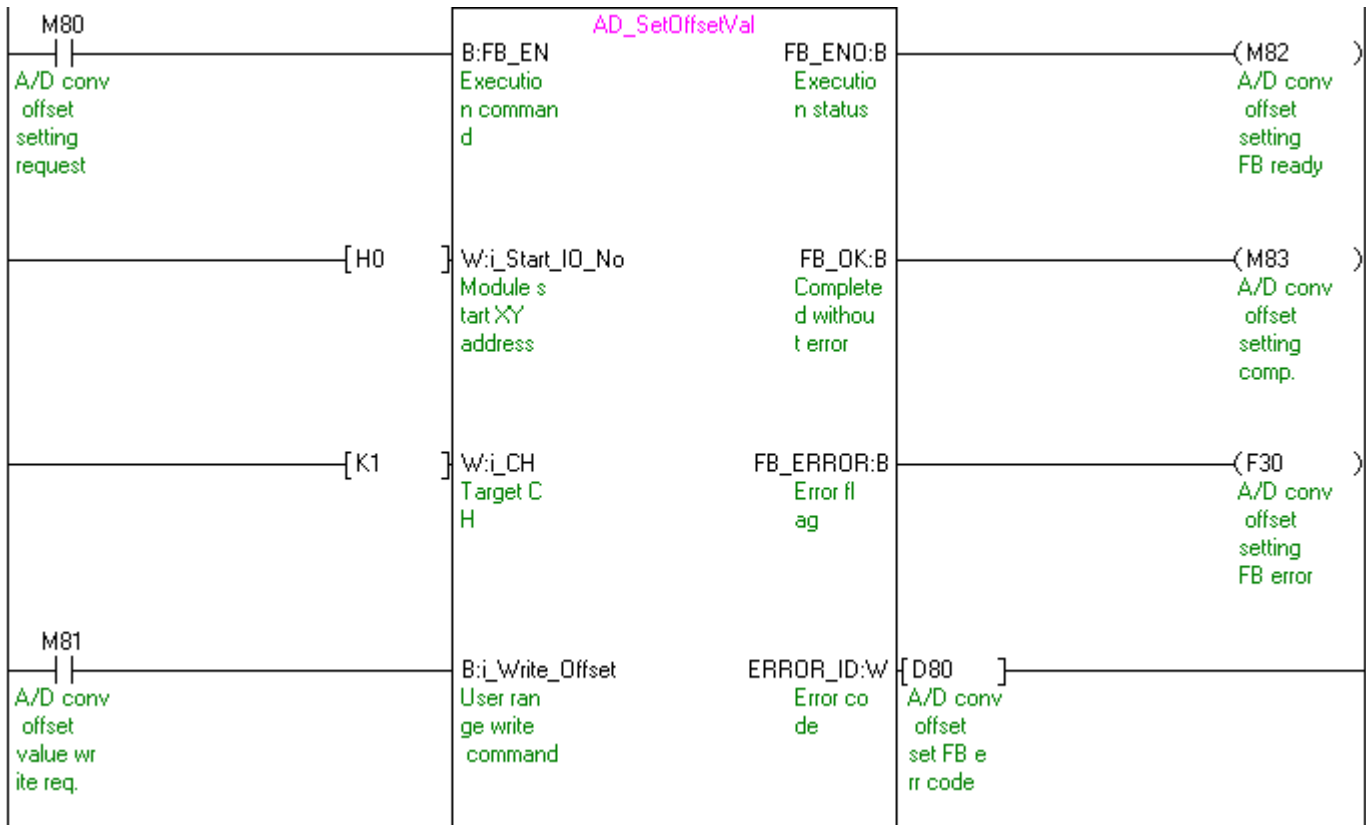

By turning ON M70, the input signal error detection setting value of channel 2 is written to the buffer memory.

M+L60AD2DA2_AD_SetOffsetVal (A/D conversion offset setting)

Label name	Setting value	Description
i_Start_IO_No	H0	Set the start XY address where the L60AD2DA2 is connected to 0H.
i_CH	K1	Set the target channel to channel 1.
i_Write_Offset	ON/OFF	Turn ON to write the offset value of channel 1.

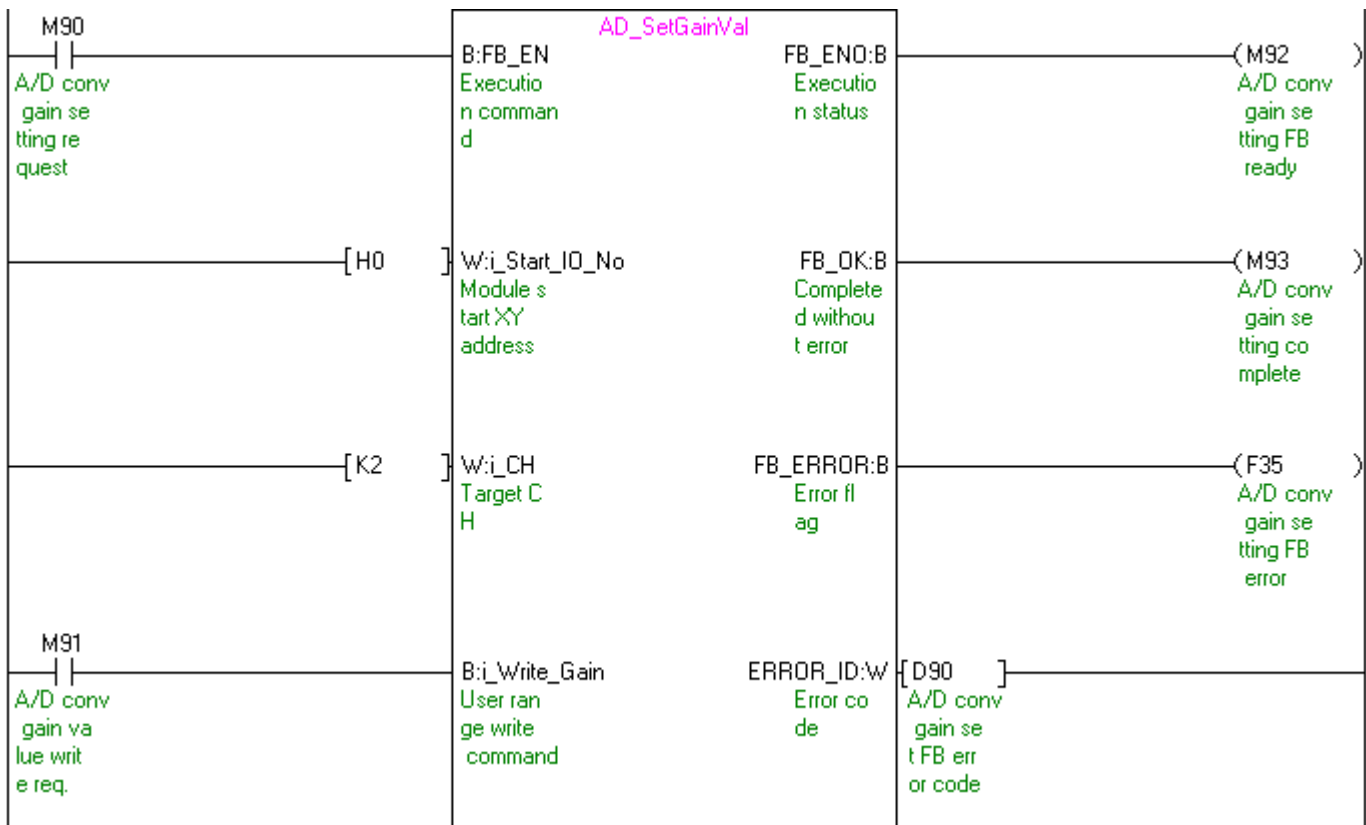

By turning ON M80 and then M81, the offset value of channel 1 is written.

M+L60AD2DA2_AD_SetGainVal (A/D conversion gain setting)

Label name	Setting value	Description
i_Start_IO_No	H0	Set the start XY address where the L60AD2DA2 is connected to 0H.
i_CH	K2	Set the target channel to channel 2.
i_Value_Change	ON/OFF	Turn ON to change the gain value.
i_Write_Gain	ON/OFF	Turn ON to write the gain value of channel 2.

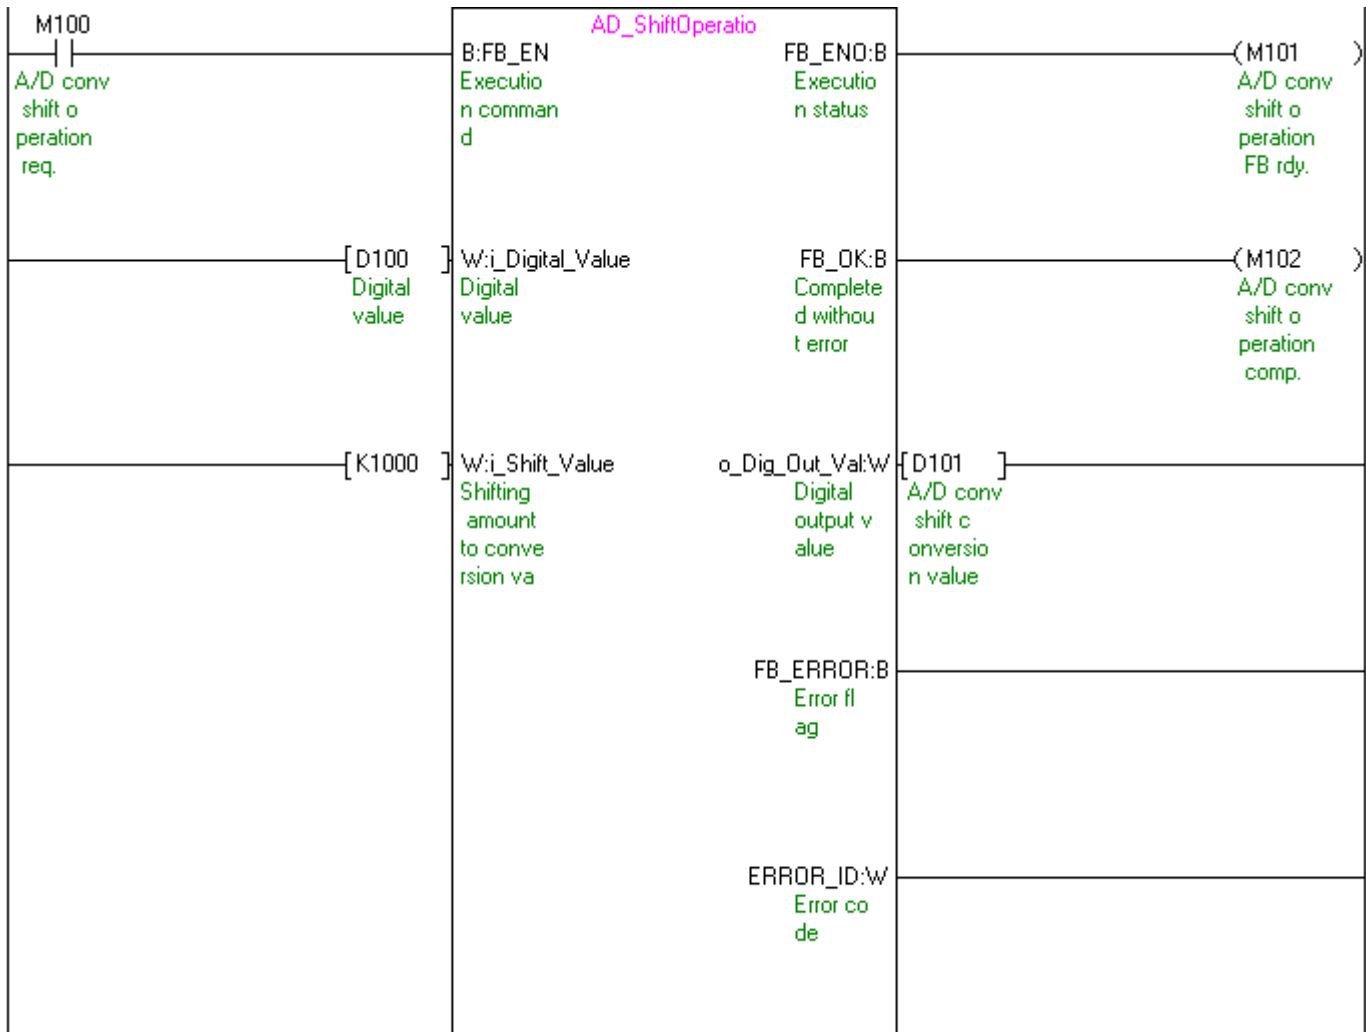

By turning ON M90 and then M91, the gain value of channel 2 is written.

M+L60AD2DA2_AD_ShiftOperation (A/D conversion shift operation)

Label name	Setting value	Description
i_Digital_Value	-	Store the target digital output value to which the shift amount is to be added.
i_Shift_Value	K1000	Set the shift amount to 1,000.

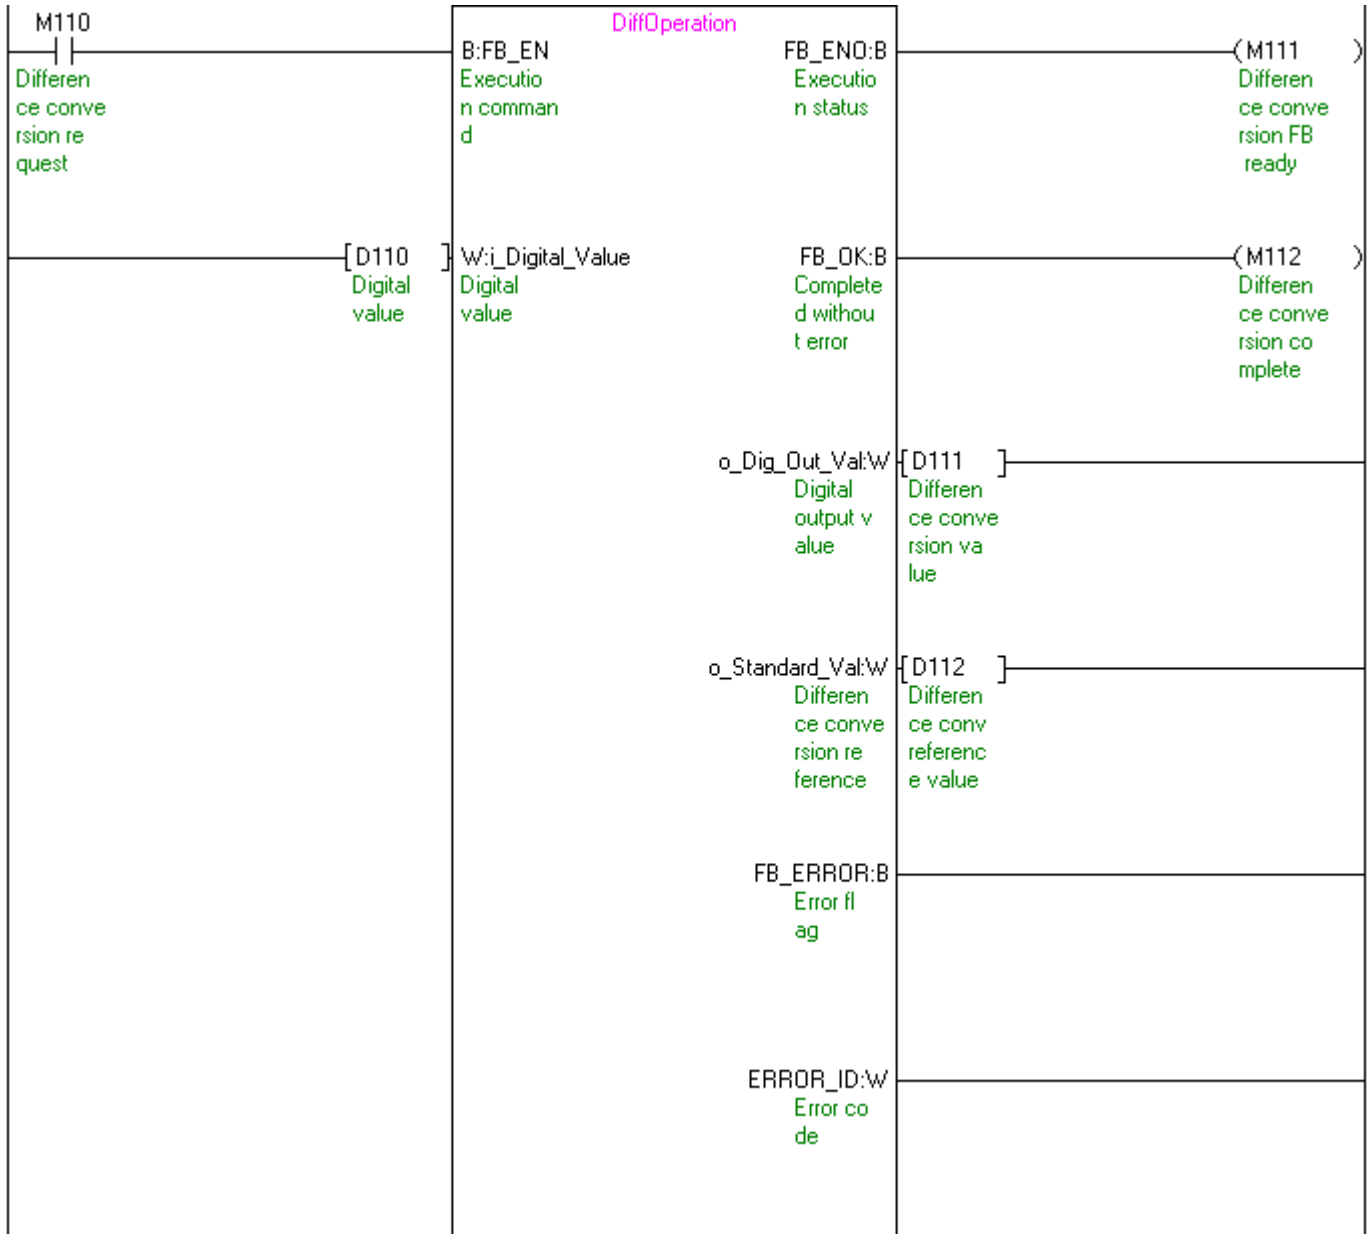

By turning ON M100, the digital value to which the conversion value shift amount is added is output.

M+L60AD2DA2_AD_DiffOperation (A/D difference conversion)

Label name	Setting value	Description
i_Digital_Value	-	Store the digital value for the difference conversion.

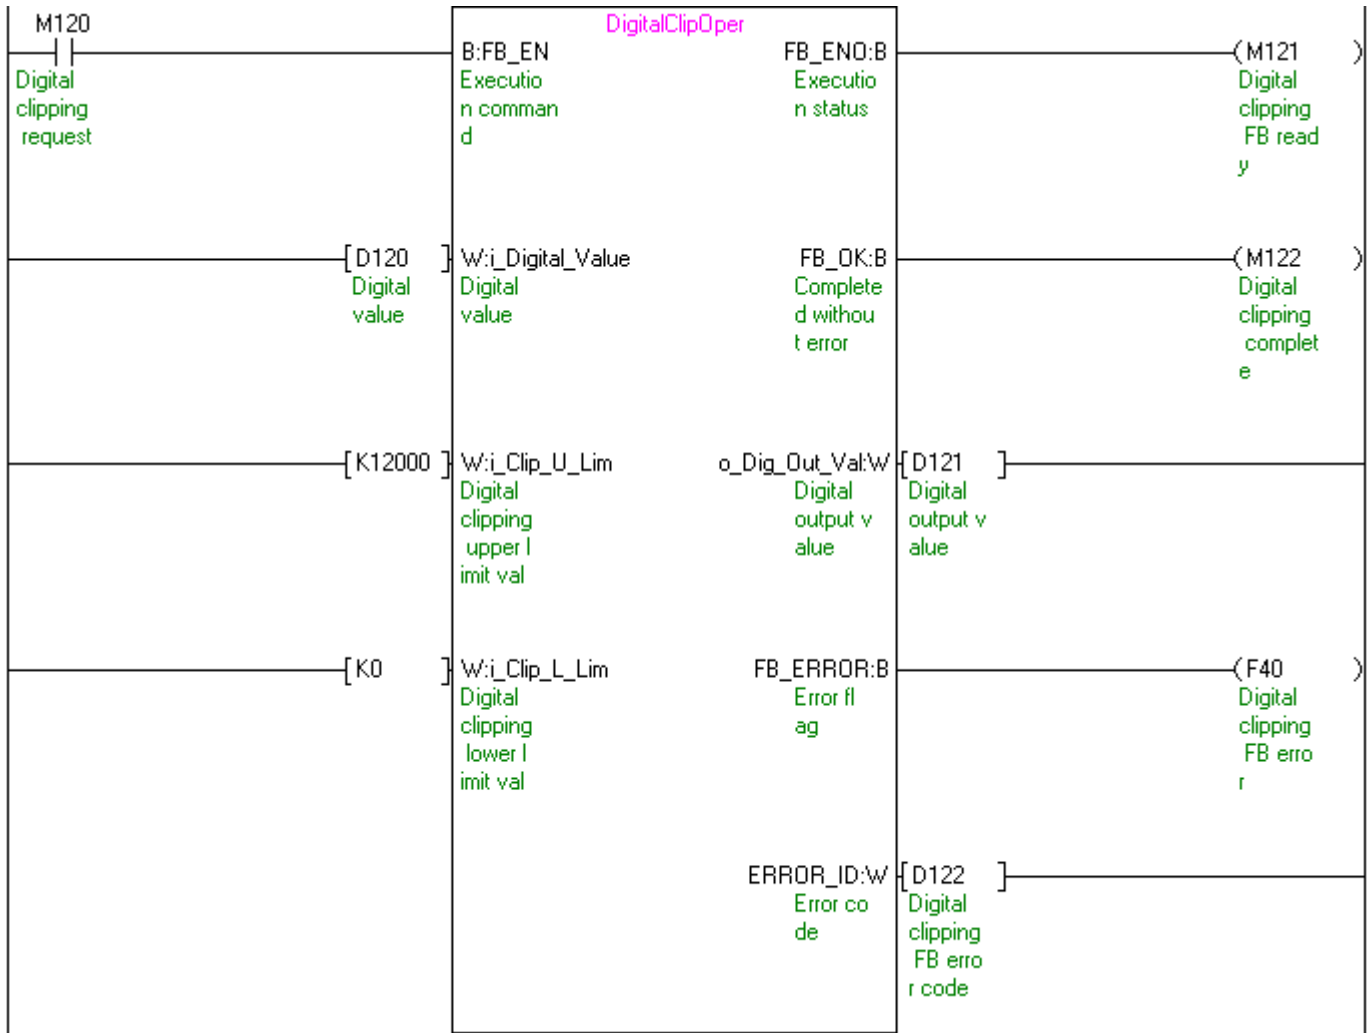

By turning ON M110, the remaining value after subtraction of the reference value from the input digital value is output.

M+L60AD2DA2_AD_ClipOperation (A/D conversion digital clipping)

Label name	Setting value	Description
i_Clip_U_Lim	K12000	Set the upper limit value of digital clipping to 12000.
i_Clip_L_Lim	K0	Set the lower limit value of digital clipping to 0.

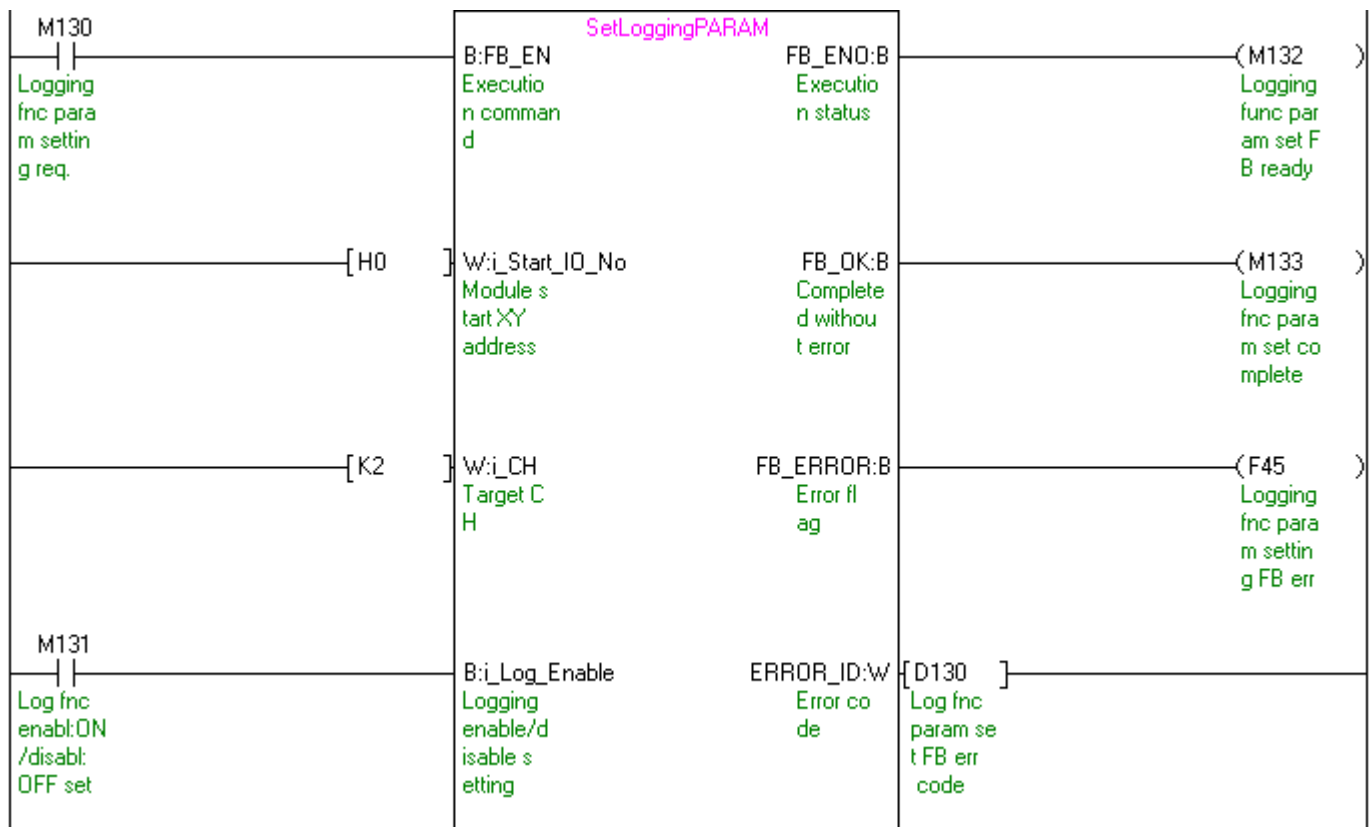

By turning ON M120, the value fixed to the upper limit value or lower limit value is output when the input digital value exceeds the upper limit value or falls below the lower limit value of the digital clipping.

M+L60AD2DA2_AD_SetLoggingPARAM (Logging function parameter setting)

Label name	Setting value	Description
i_Start_IO_No	H0	Set the start XY address where the L60AD2DA2 is connected to 0H.
i_CH	K2	Set the target channel to channel 2.
i_Log_Enable	ON/OFF	Turn ON to enable the logging.
i_Log_Data	K0	Set the logging data to "Digital output value".
i_Log_Cycle_Val	K320	Set the cycle for storing logging data to 320 μ s.
i_Log_Cycle_Unit	K0	Set the logging cycle unit to " μ s".
i_Log_Points	K1	Set the data points to be recorded before the hold trigger is detected and the logging function is paused to 1.
i_Log_Trig_Cond	K1	Set the condition for which a level trigger is generated to "Above".
i_Log_Trig_Data	K12	Set the buffer memory address for activating the level trigger to 12.
i_Log_Trig_Value	K10000	Set a level at which the level trigger is activated to 10,000.

By turning ON M130, the value for the logging function parameter setting of channel 2 is written to the buffer memory.

(Continues to the next page)

[K0]	W:i_Log_Data Logging data setting
[K320]	W:i_Log_Cycle_Val Logging cycle setting value
[K0]	W:i_Log_Cycle_Unit Logging cycle unit setting
[K1]	W:i_Log_Points Logging points after trigger
[K1]	W:i_Log_Trig_Cond Level trigger condition setting
[K12]	W:i_Log_Trig_Data Trigger data
[K10000]	W:i_Log_Trig_Value Trigger setting value

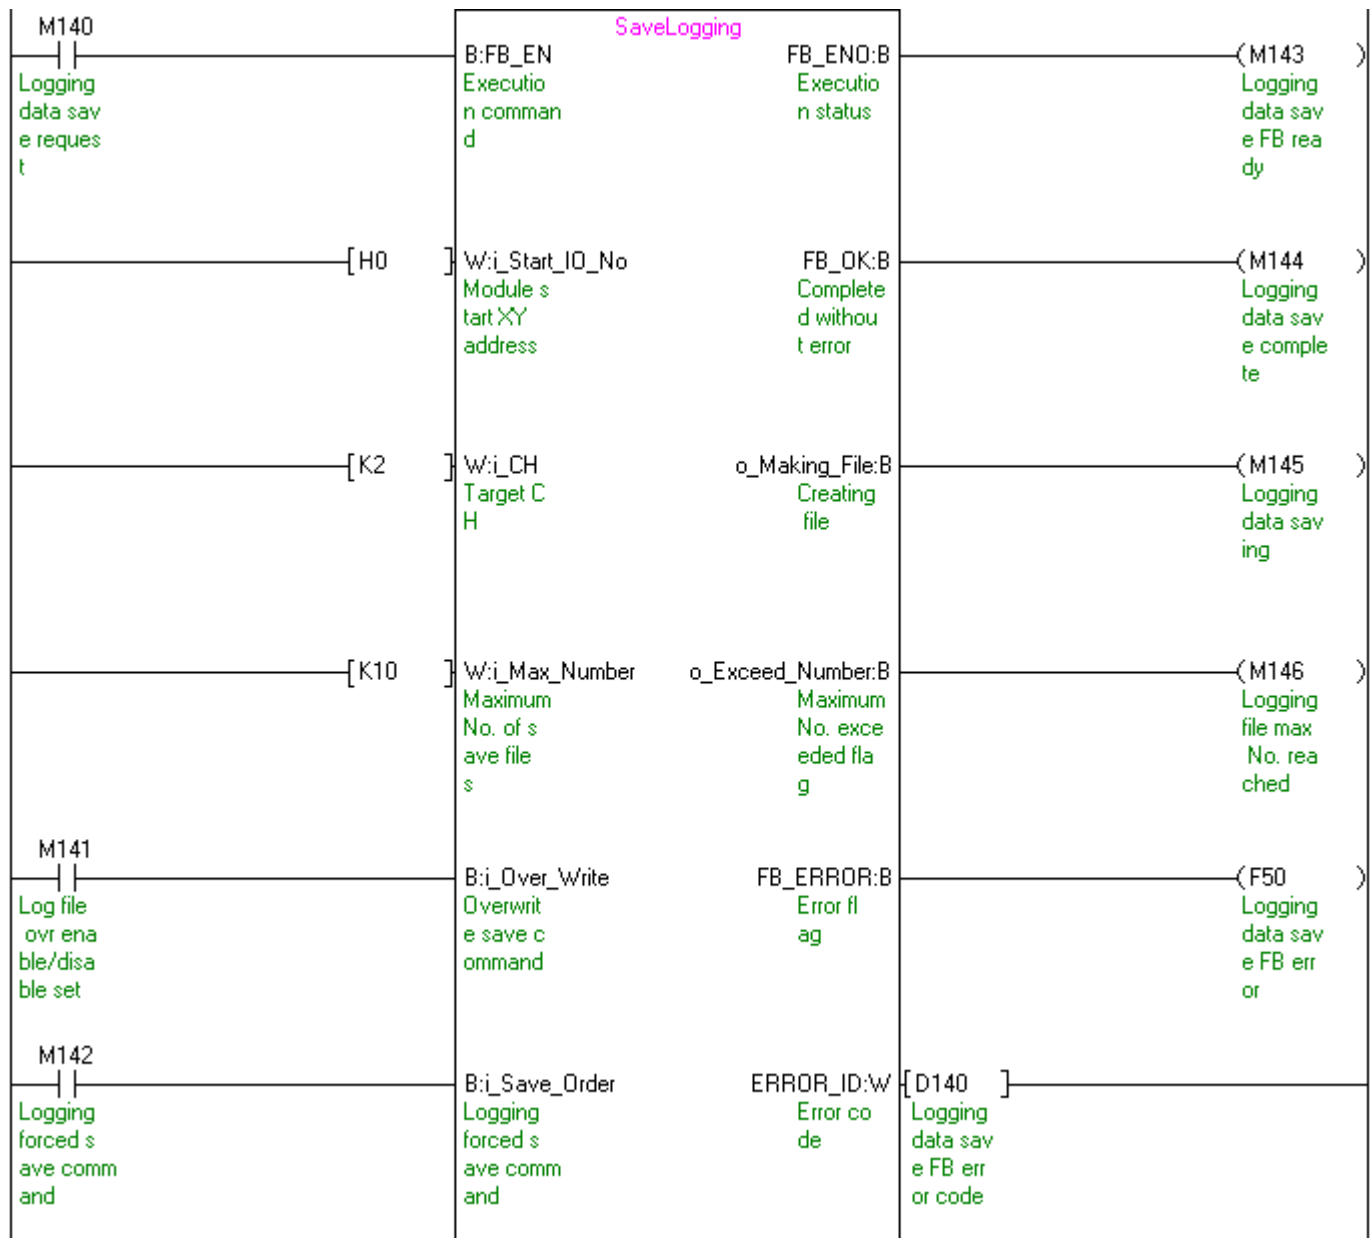

M+L60AD2DA2_AD_SaveLogging (Logging data save)

Label name	Setting value	Description
i_Start_IO_No	H0	Set the start XY address where the L60AD2DA2 is connected to 0H.
i_CH	K2	Set the target channel to channel 2.
i_Max_Number	K10	Set the maximum number of CSV files the FB saves to 10.
i_Over_Write	ON/OFF	Set whether to overwrite the file to which the logging data is written.
i_Save_Order	ON/OFF	Turn ON to save the logging data while the logging is stopped (disabled).

By turning ON M140, the logging data from the start pointer of channel 2 for the number of the logging data are sorted chronologically. Then, the logging data and the trigger detection information are saved in CSV format in the SD memory card mounted on the CPU.

M+L60AD2DA2_DA_WriteDAVal (Write D/A conversion data)

Label name	Setting value	Description
i_Start_IO_No	H0	Set the start XY address where the L60AD2DA2 is connected to 0H.
i_CH	K3	Set the target channel to channel 3.
i_DA_Value	K4000	Set the digital value to 4,000.

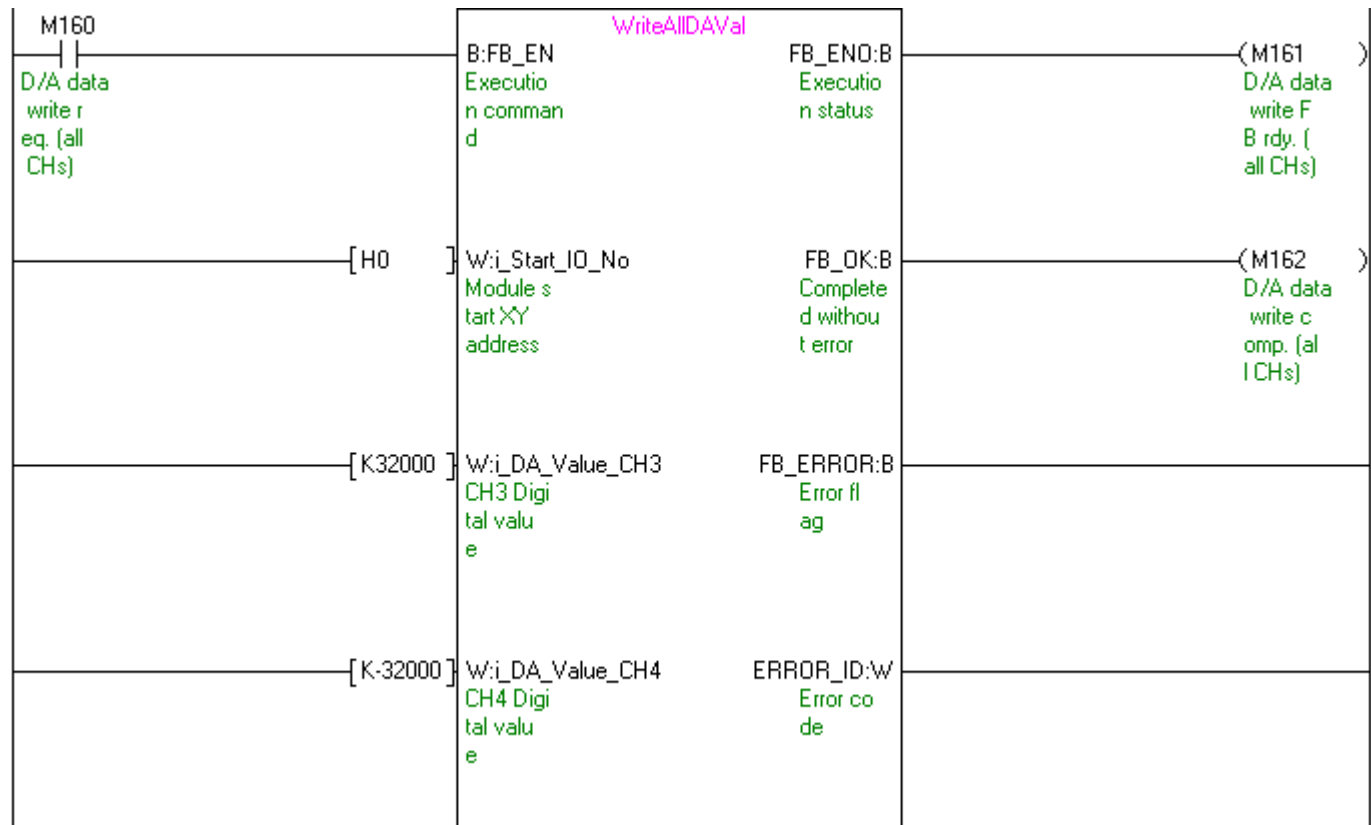

By turning ON M150, the digital value of channel 3 is written to the buffer memory.

M+L60AD2DA2_DA_WriteAllDAVal (Write D/A conversion data (all CHs))

Label name	Setting value	Description
i_Start_IO_No	H0	Set the start XY address where the L60AD2DA2 is connected to 0H.
i_DA_ValueCH3	K32000	Set the digital value of channel 3 to 32,000.
i_DA_ValueCH4	K-32000	Set the digital value of channel 4 to -32,000.

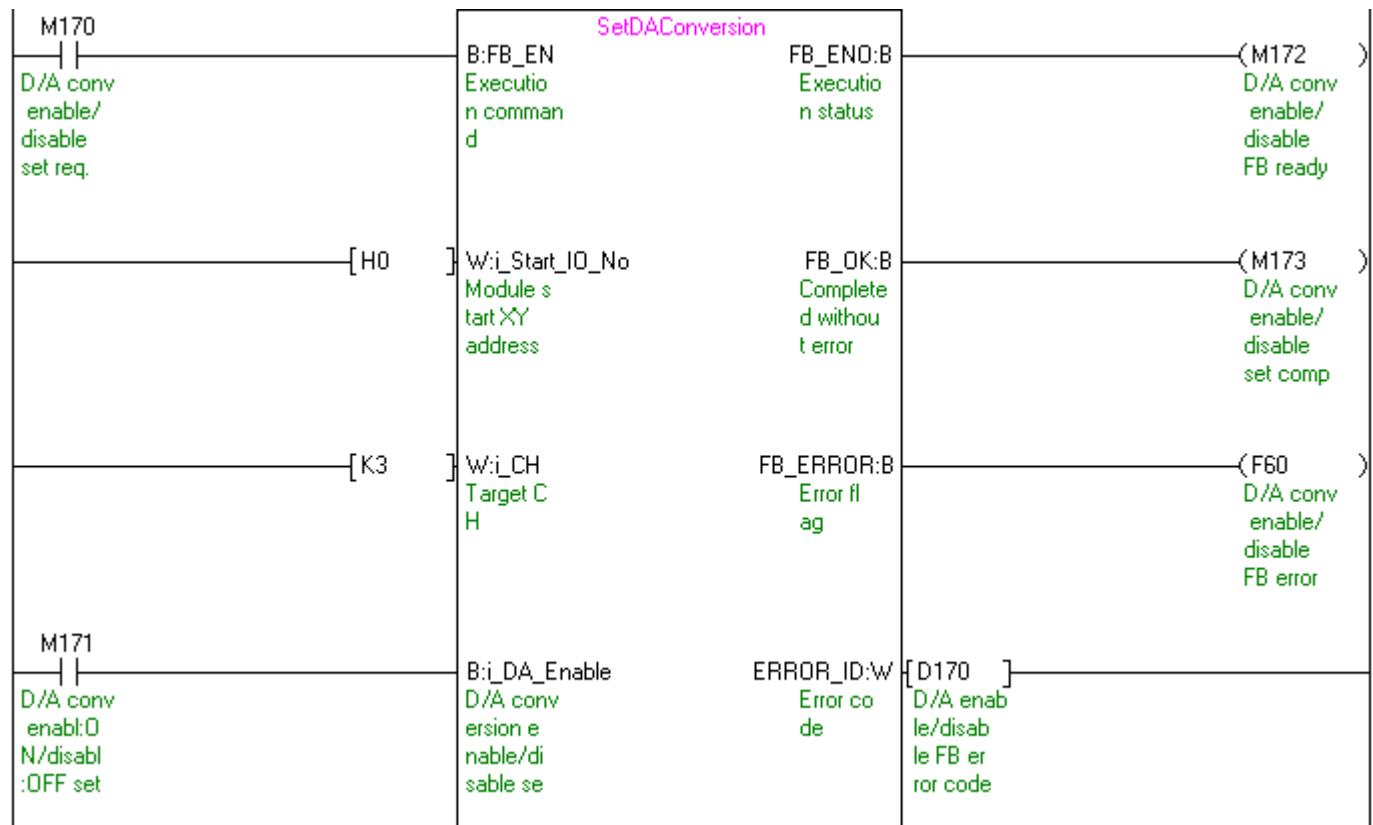

By turning ON M160, the digital values of channel 3 and 4 are written to the buffer memory.

M+L60AD2DA2_DA_SetDAConversion (D/A conversion enable/disable setting)

Label name	Setting value	Description
i_Start_IO_No	H0	Set the start XY address where the L60AD2DA2 is connected to 0H.
i_CH	K3	Set the target channel to channel 3.
i_DA_Enable	ON/OFF	Turn ON to enable the D/A conversion of the target channel.

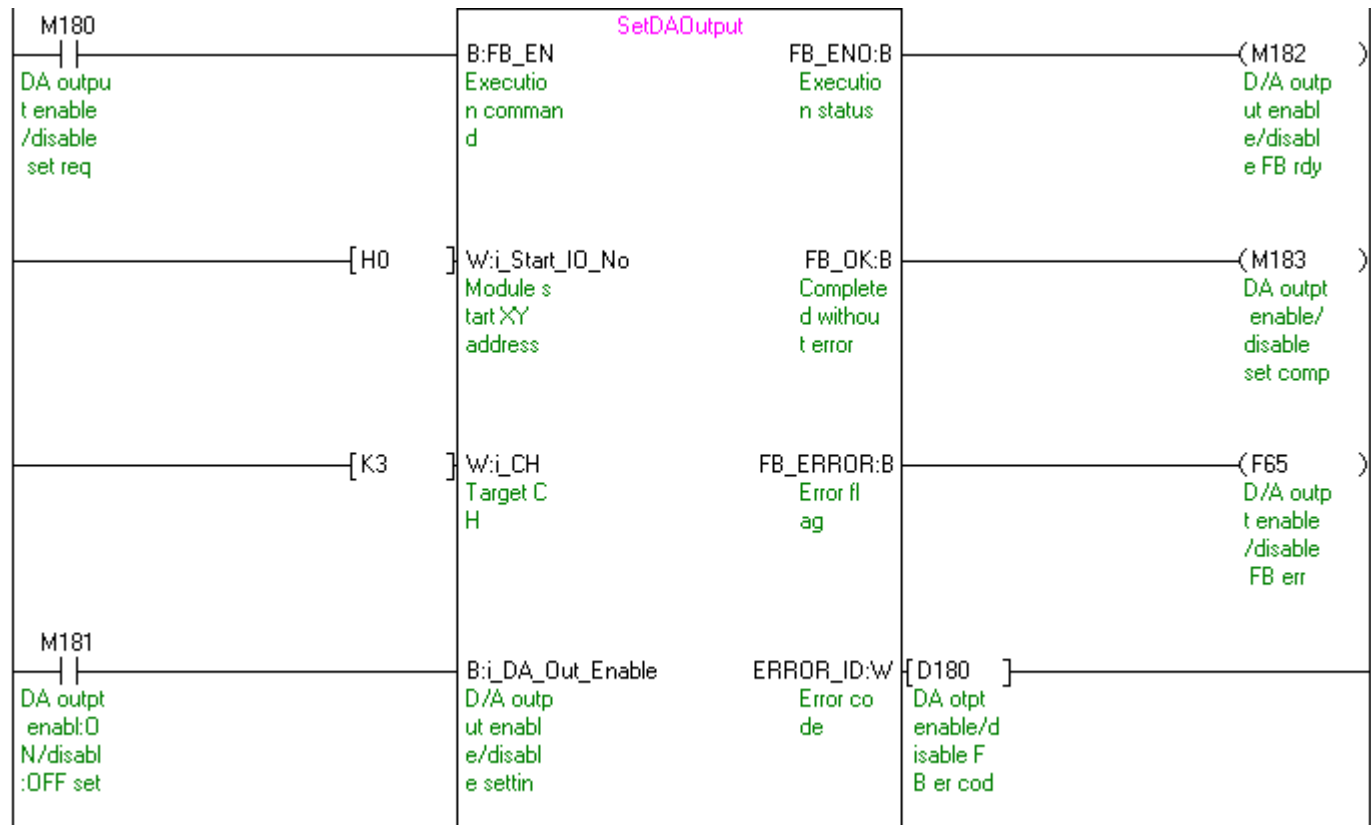

By turning ON M170, the value for the D/A conversion enable/disable setting of channel 3 is written to the buffer memory.

M+L60AD2DA2_DA_SetDAOutput (D/A output enable/disable setting)

Label name	Setting value	Description
i_Start_IO_No	H0	Set the start XY address where the L60AD2DA2 is connected to 0H.
i_CH	K3	Set the target channel to channel 3.
i_DA_Out_Enable	ON/OFF	Turn ON to enable the D/A output of the target channel.

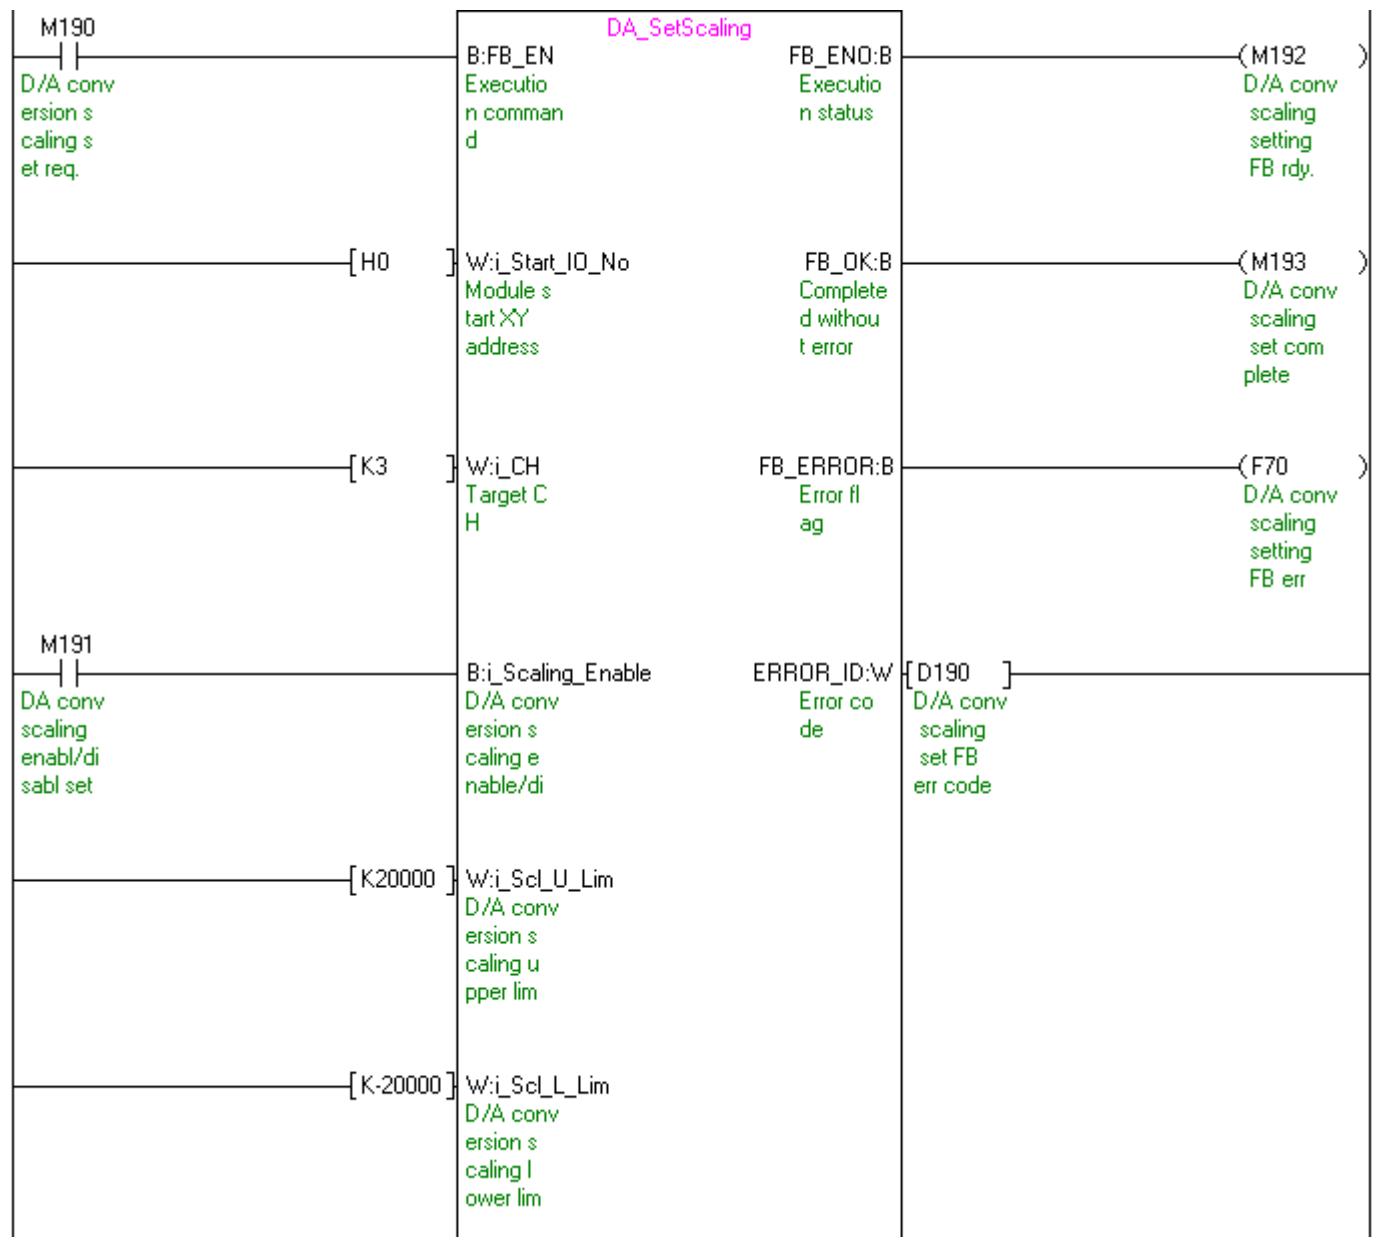

By turning ON M180 and then M181, the D/A output of channel 3 is enabled.

M+L60AD2DA2_DA_SetScaling (D/A conversion scaling setting)

Label name	Setting value	Description
i_Start_IO_No	H0	Set the start XY address where the L60AD2DA2 is connected to 0H.
i_CH	K3	Set the target channel to channel 3.
i_Scaling_Enable	ON/OFF	Turn ON to enable the scaling.
i_Scl_U_Lim	K20000	Set the scaling upper limit value to 20,000.
i_Scl_L_Lim	K-20000	Set the scaling lower limit value to -20,000.

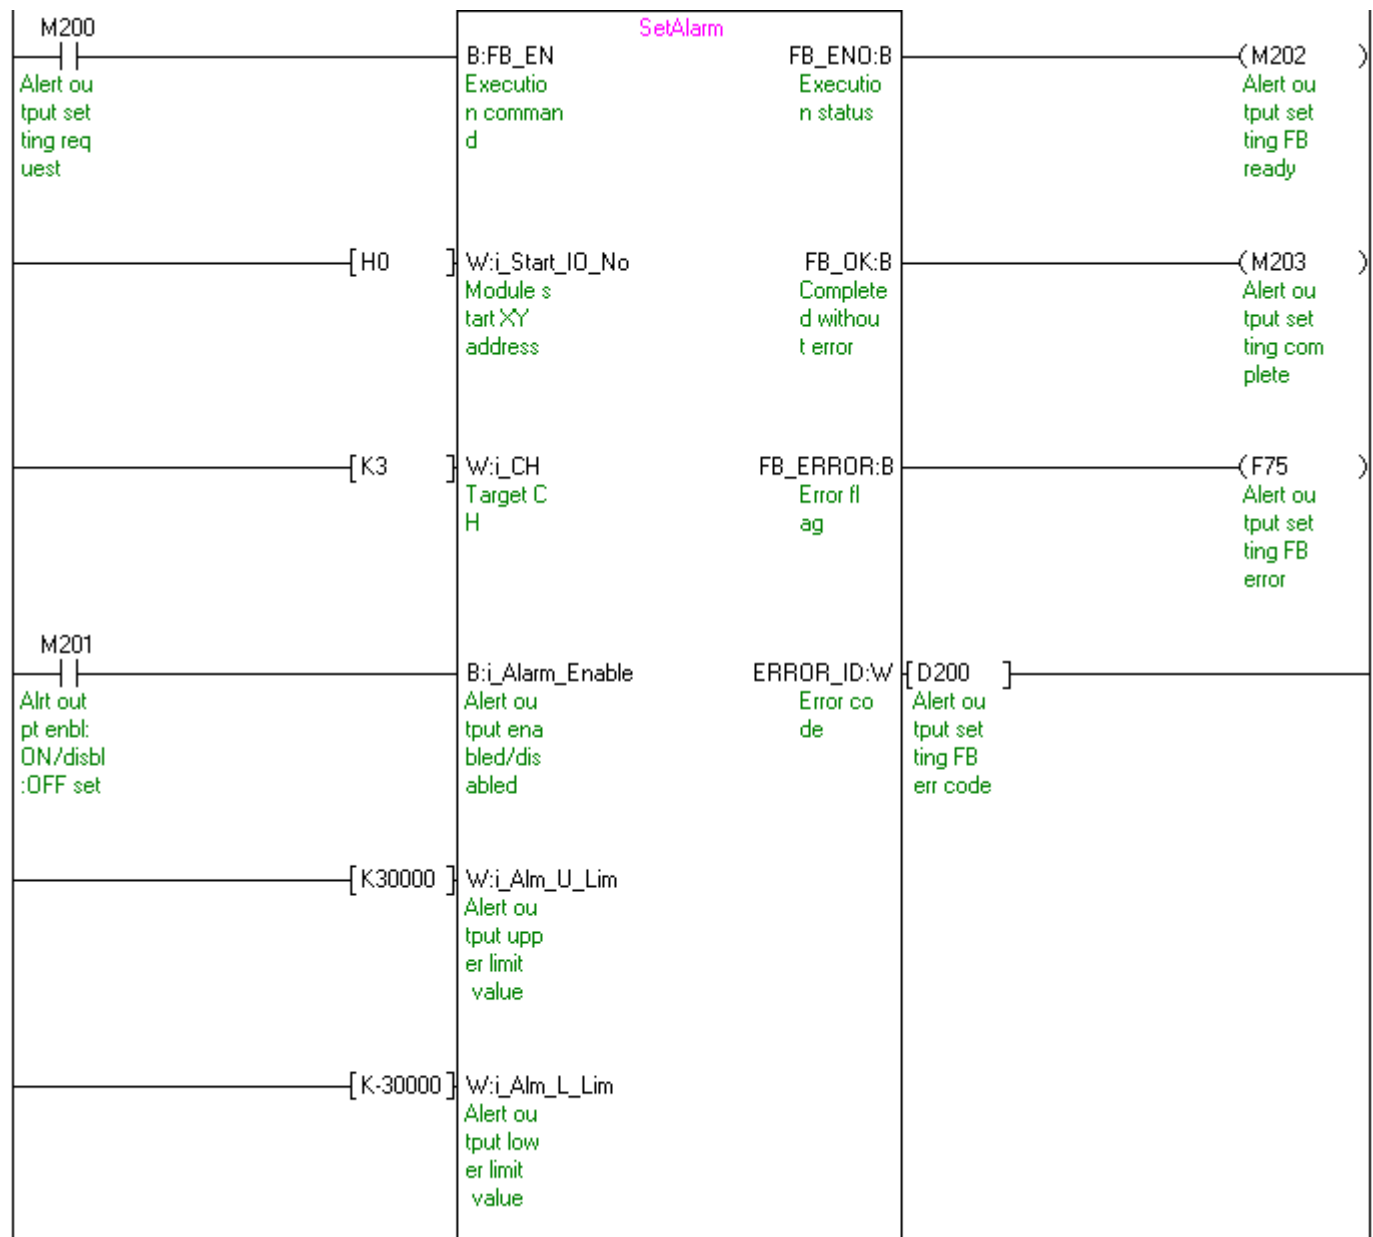

By turning ON M190, the value for the scaling setting of channel 3 is written to the buffer memory.

M+L60AD2DA2_DA_SetAlarm (D/A conversion alert output setting)

Label name	Setting value	Description
i_Start_IO_No	H0	Set the start XY address where the L60AD2DA2 is connected to 0H.
i_CH	K3	Set the target channel to channel 3.
i_Alarm_Enable	ON/OFF	Turn ON to enable the alert output.
i_Alm_U_Lim	K30000	Set the alert output upper limit value to 30,000.
i_Alm_L_Lim	K-30000	Set the alert output lower limit value to -30,000.

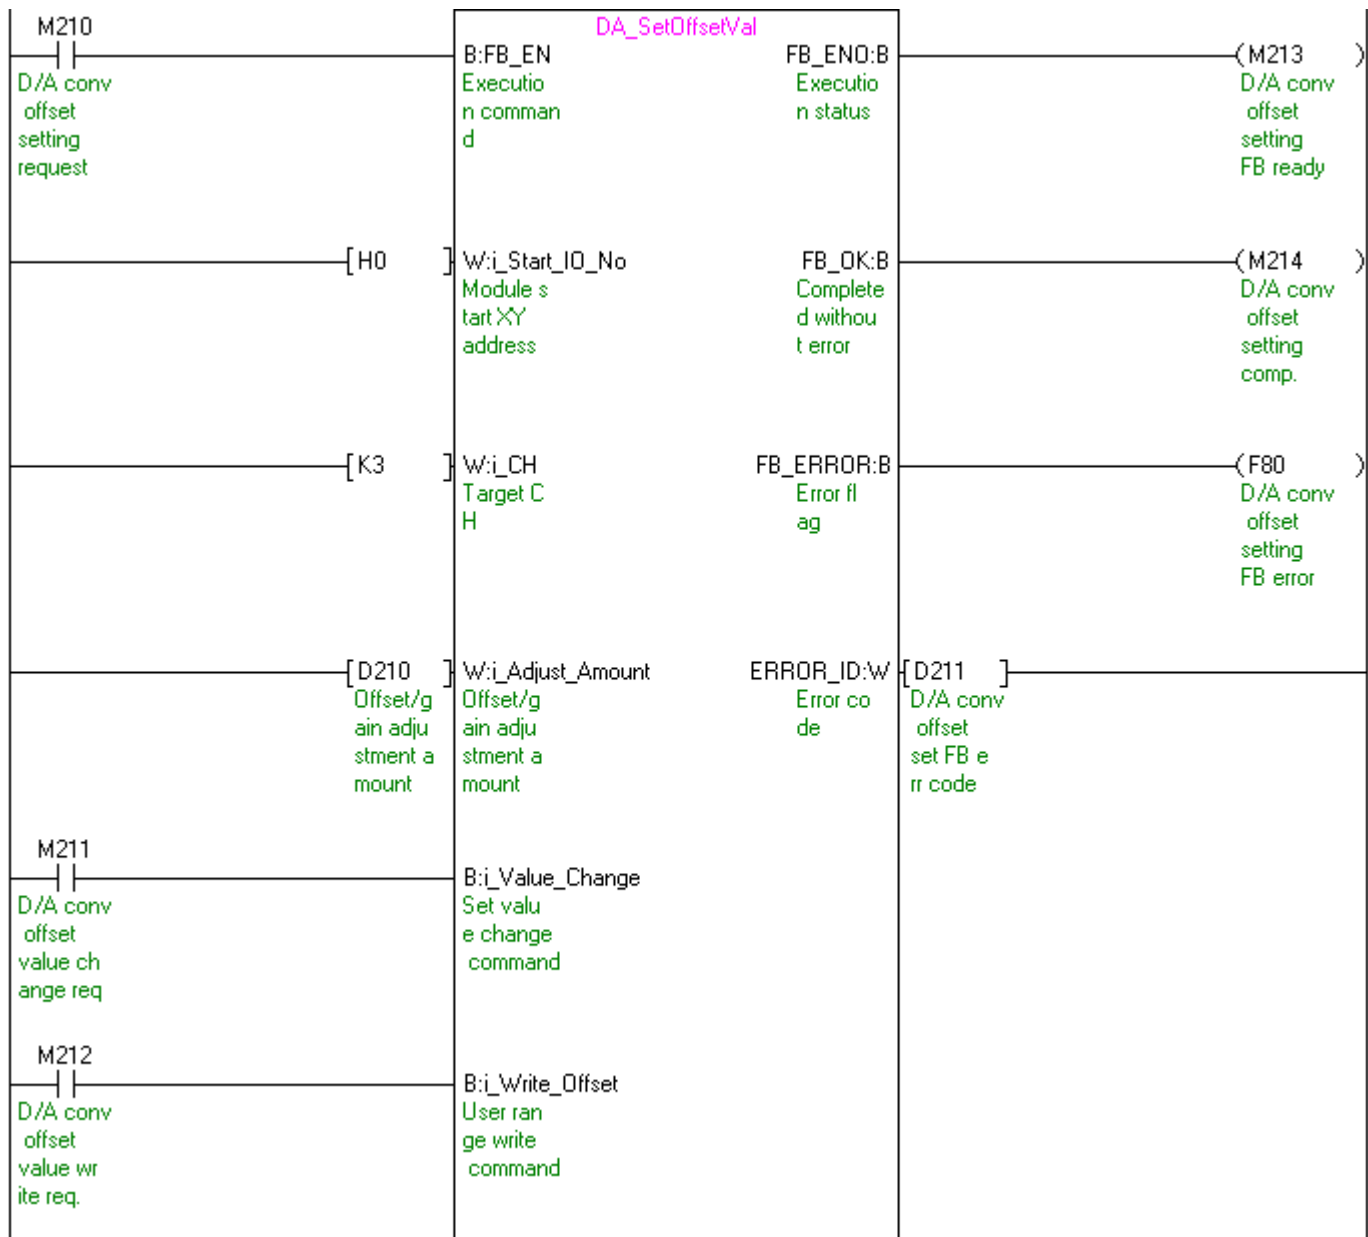

By turning ON M200, the value for the alert output of channel 3 is written to the buffer memory.

M+L60AD2DA2_DA_SetOffsetVal (D/A conversion offset setting)

Label name	Setting value	Description
i_Start_IO_No	H0	Set the start XY address where the L60AD2DA2 is connected to 0H.
i_CH	K3	Set the target channel to channel 3.
i_Value_Change	ON/OFF	Turn ON to change the offset value.
i_Write_Offset	ON/OFF	Turn ON to write the offset value of channel 3.

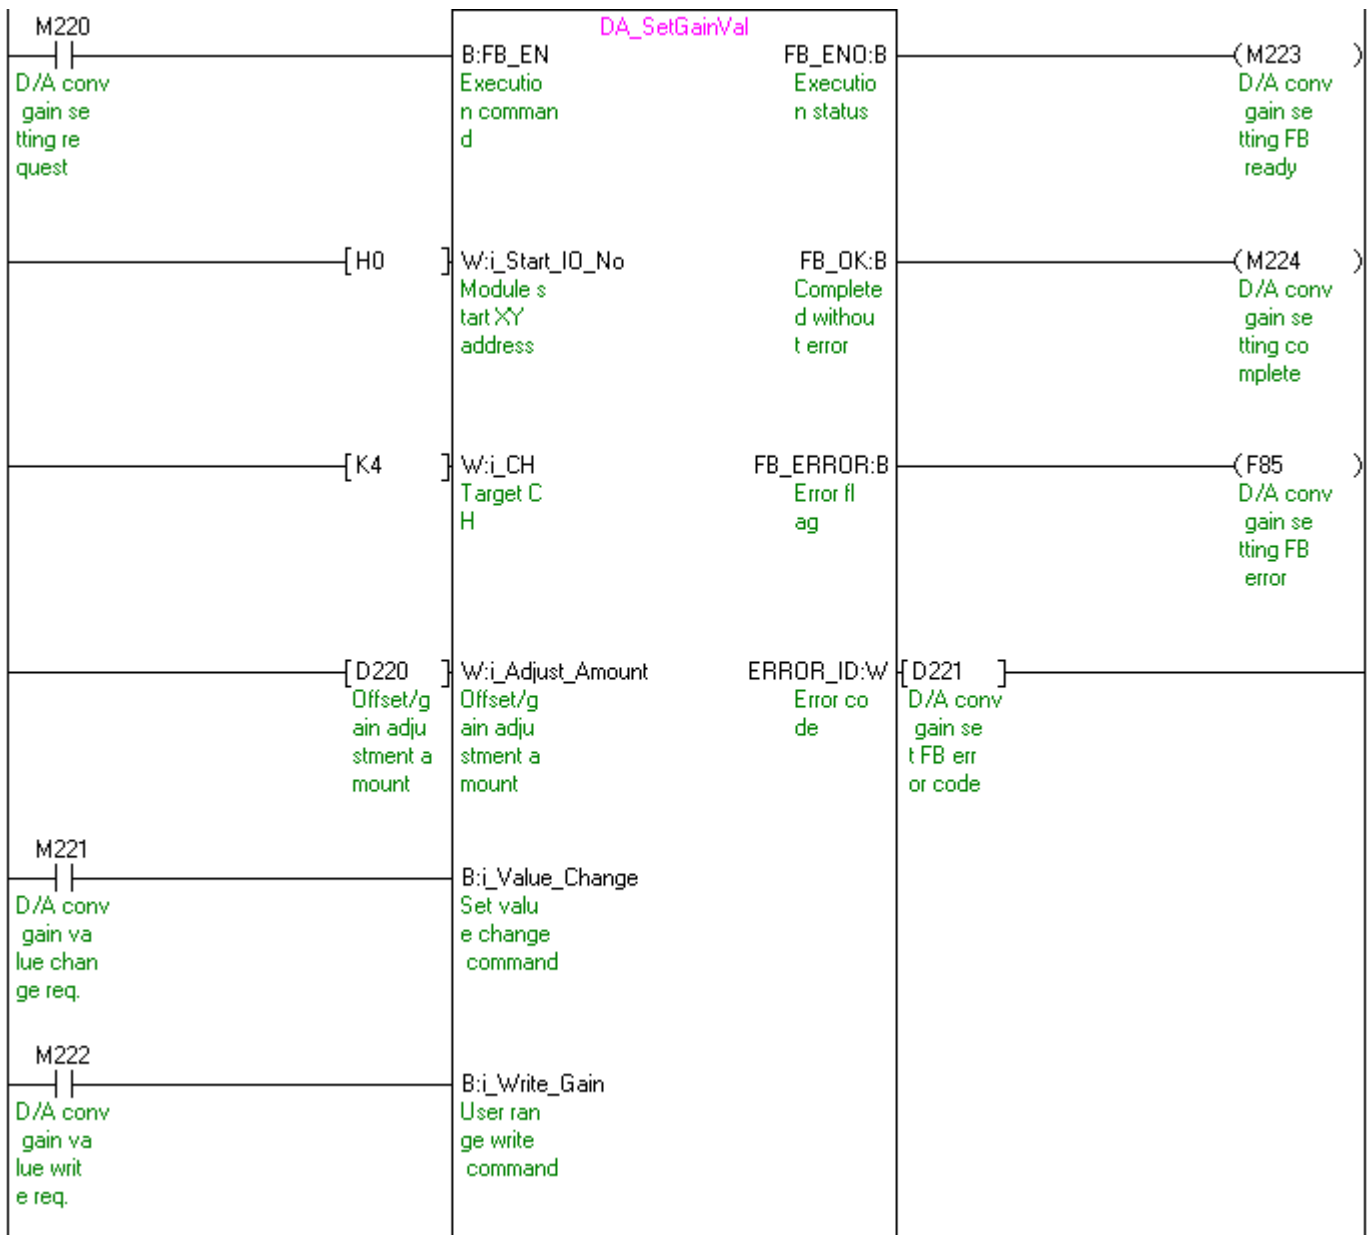

By turning ON M210 and then M211, the offset value of channel 3 is changed. Then, by turning ON M212 the offset value of channel 3 is written.

M+L60AD2DA2_DA_SetGainVal (D/A conversion gain setting)

Label name	Setting value	Description
i_Start_IO_No	H0	Set the start XY address where the L60AD2DA2 is connected to 0H.
i_CH	K4	Set the target channel to channel 4.
i_Value_Change	ON/OFF	Turn ON to change the gain value.
i_Write_Gain	ON/OFF	Turn ON to write the gain value of channel 4.

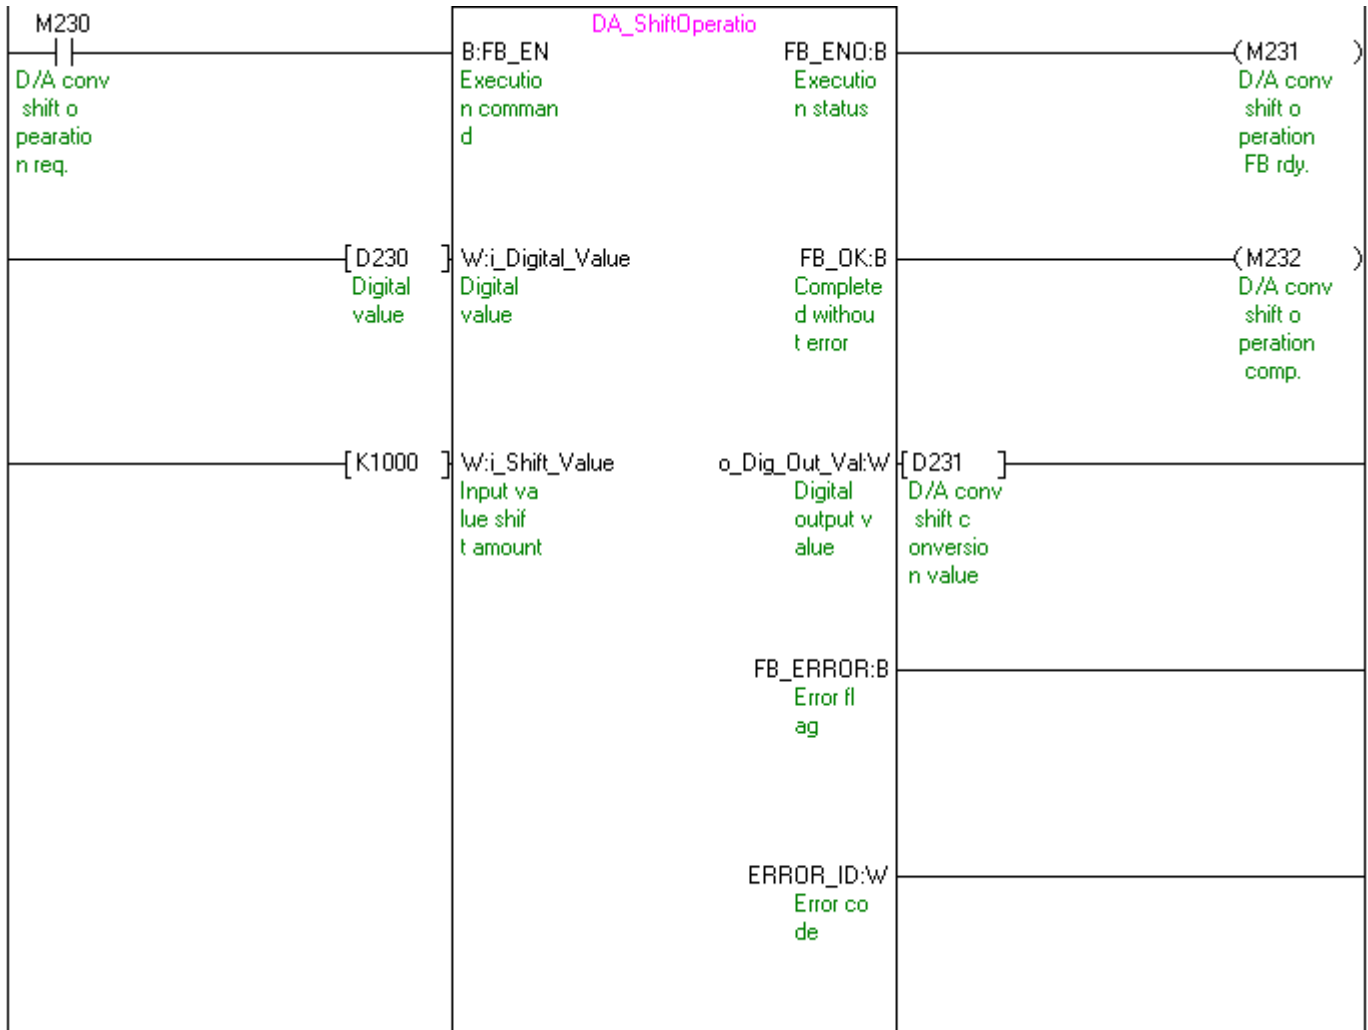

By turning ON M220 and then M221, the gain value of channel 4 is changed. Then, by turning ON M232, the gain value of channel 4 is written.

M+L60AD2DA2_DA_ShiftOperation (D/A conversion shift operation)

Label name	Setting value	Description
i_Digital_Value	-	Store the target digital output value to which the shift amount is to be added.
i_Shift_Value	K1000	Set the shift amount to 1,000.

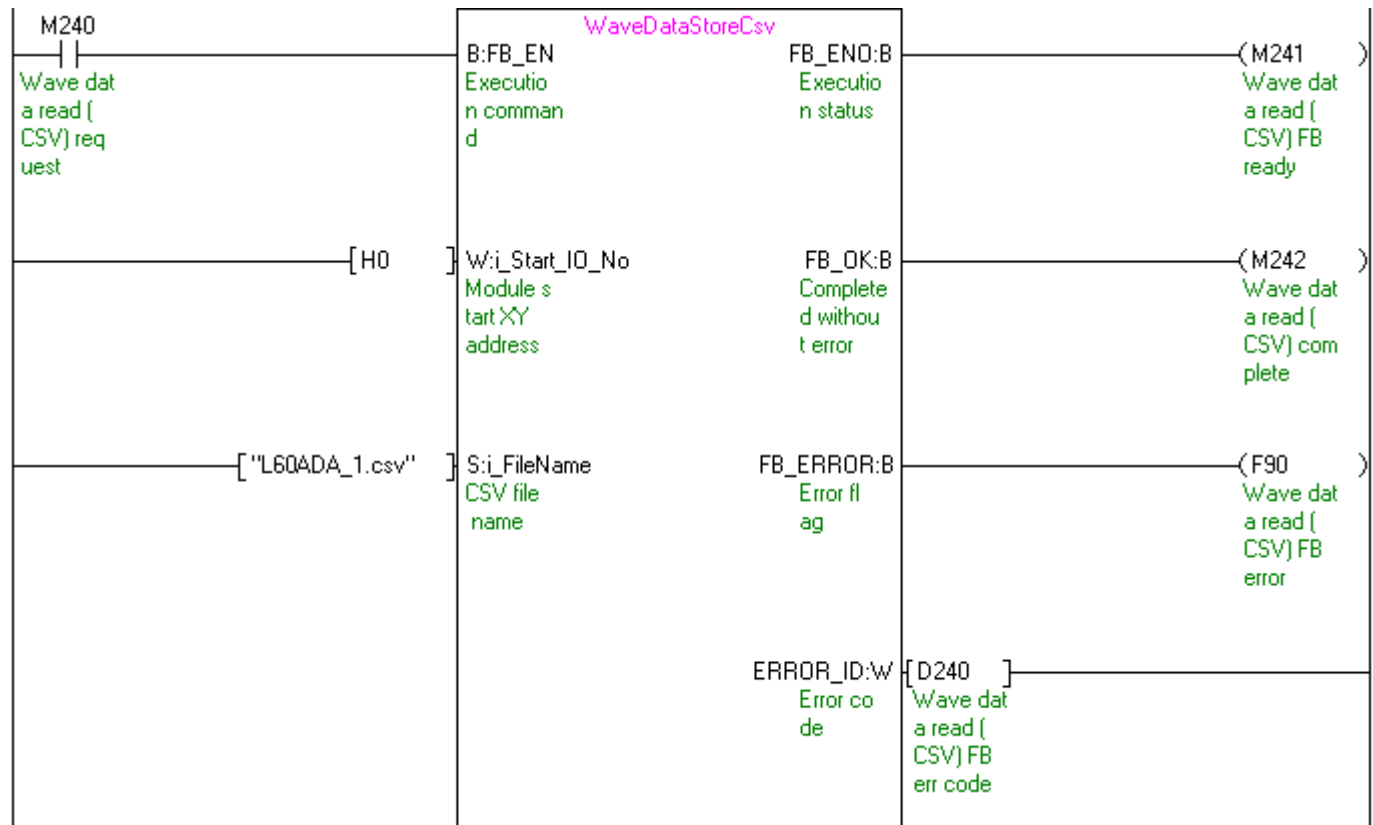

By turning ON M230, the digital value to which the input value shift amount is added is output.

M+L60AD2DA2_DA_WaveDataStoreCsv (Read wave data (CSV file))

Label name	Setting value	Description
i_Start_IO_No	H0	Set the start XY address where the L60AD2DA2 is connected to 0H.
i_FileName	"L60ADA_1.csv"	Set "L60ADA_1.csv" as the name of the CSV file from which the parameters and the wave data of the wave output function are read.

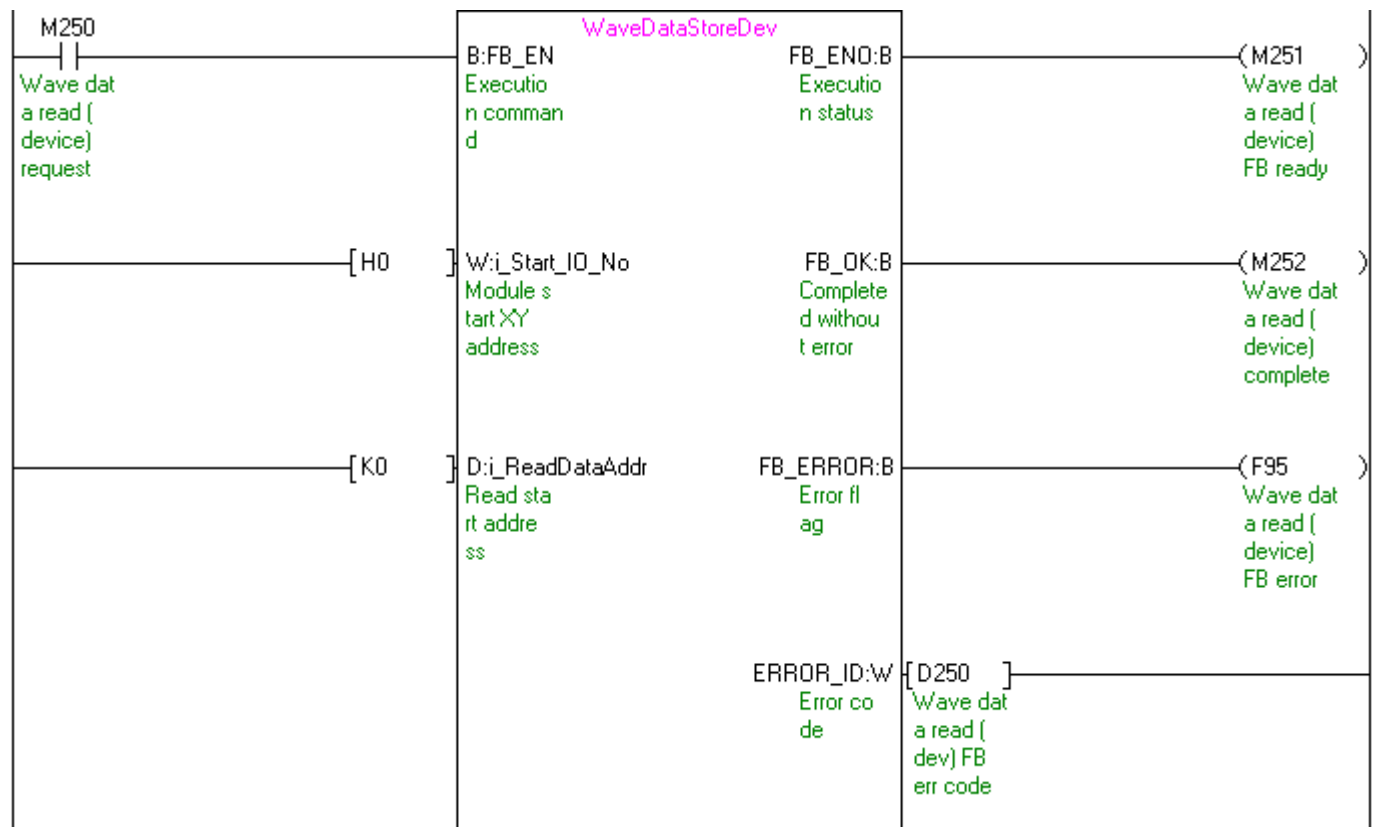

By turning ON M240, the parameters and wave data of the wave output function are read from "L60ADA_1.csv" in the SD memory card and stored in the buffer memory.

M+L60AD2DA2_DA_WaveDataStoreDev (Read wave data (device))

Label name	Setting value	Description
i_Start_IO_No	H0	Set the start XY address where the L60AD2DA2 is connected to 0H.
i_ReadDataAddr	K0	Set ZR0 as the read start address where the parameters and the wave data of the wave output function are stored.

By turning ON M250, the parameters and wave data of the wave output function are read from the file register ZR0 or later, and stored in the buffer memory.

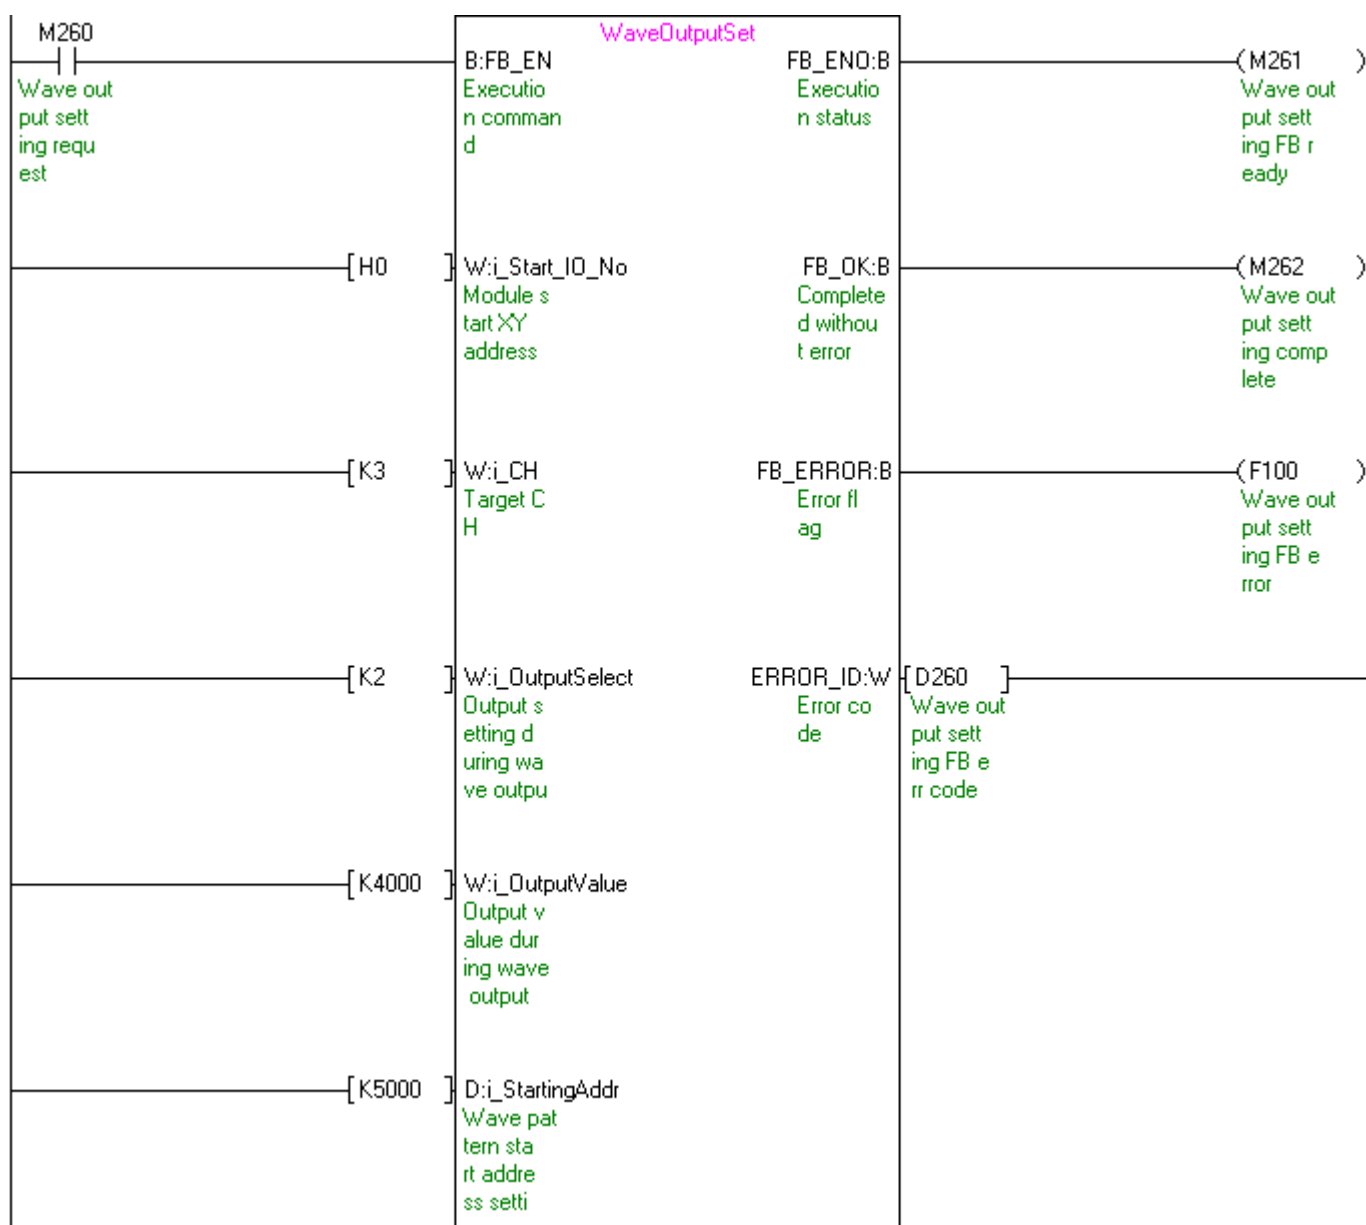

M+L60AD2DA2_DA_WaveOutputSetting (Wave output setting)

Label name	Setting value	Description
i_Start_IO_No	H0	Set the start XY address where the L60AD2DA2 is connected to 0H.
i_CH	K3	Set the target channel to channel 3.
i_OutputSelect	K2	Set "Output setting during wave output stop" to 2 (Output value during wave output stop).
i_OutputValue	K4000	Set the output setting value during the wave output stop to 4,000.
i_StartingAddr	K5000	Set the start address of the wave pattern to be output to 5,000.
i_PointsSetting	K10000	Set the data points of the wave pattern to be output to 10,000.
i_Frequency	K2000	Set the wave output times to 2,000.
i_ConvSpeed	K1	Set the constant for wave output conversion cycle to 1.

By turning ON M260, the wave output setting of channel 3 is performed.

(Continues to the next page)

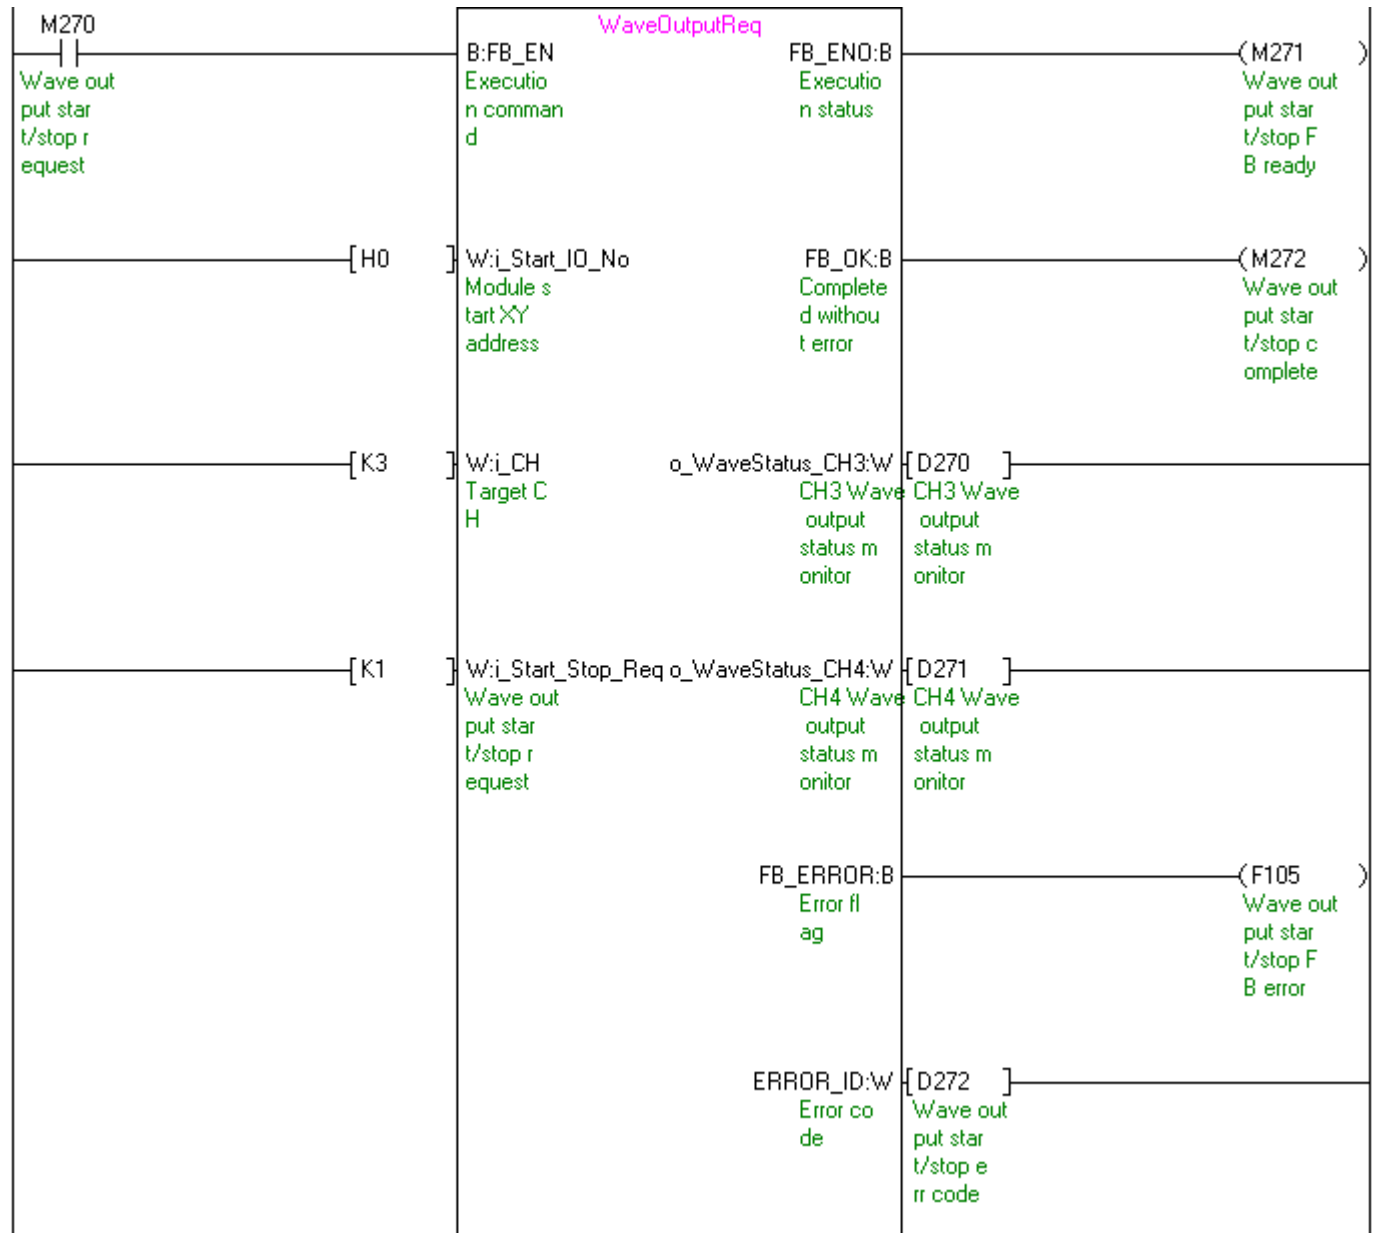

[K10000]	D:i_PointsSetting Wave pattern data points setting
[K2000]	W:i_Frequency Wave pattern output repetitions
[K1]	W:i_ConvSpeed Constant for wave output conversion

M+L60AD2DA2_DA_WaveOutReqSetting (Wave output start/stop request)

Label name	Setting value	Description
i_Start_IO_No	H0	Set the start XY address where the L60AD2DA2 is connected to 0H.
i_CH	K3	Set the target channel to channel 3.
i_Start_Stop_Req	K1	Set Wave output start/stop request to 1 (Wave output start request).

By turning ON M270, the wave output of channel 3 is started.

1) List of devices

a) External input (commands)

Device	FB name	Application (ON details)

F135		Conv. chara data read(dev)FB err
D350		Conv chr dat read(dev)FB err cod

M+L60AD2DA2_ReadADVal_WriteDAVal (Read A/D conversion data and write D/A conversion data)

Label name	Setting value	Description
i_Start_IO_No	H0	Set the start XY address where the L60AD2DA2 is connected to 0H.
i_DA_ValueCH3	K16000	Set the digital value of channel 3 to 16,000.
i_DA_ValueCH4	K-16000	Set the digital value of channel 4 to -16,000.

By turning ON M280, the A/D conversion data of the A/D conversion channels (CH1 and CH2) is read and the digital values of the D/A conversion channels (CH3 and CH4) are written.

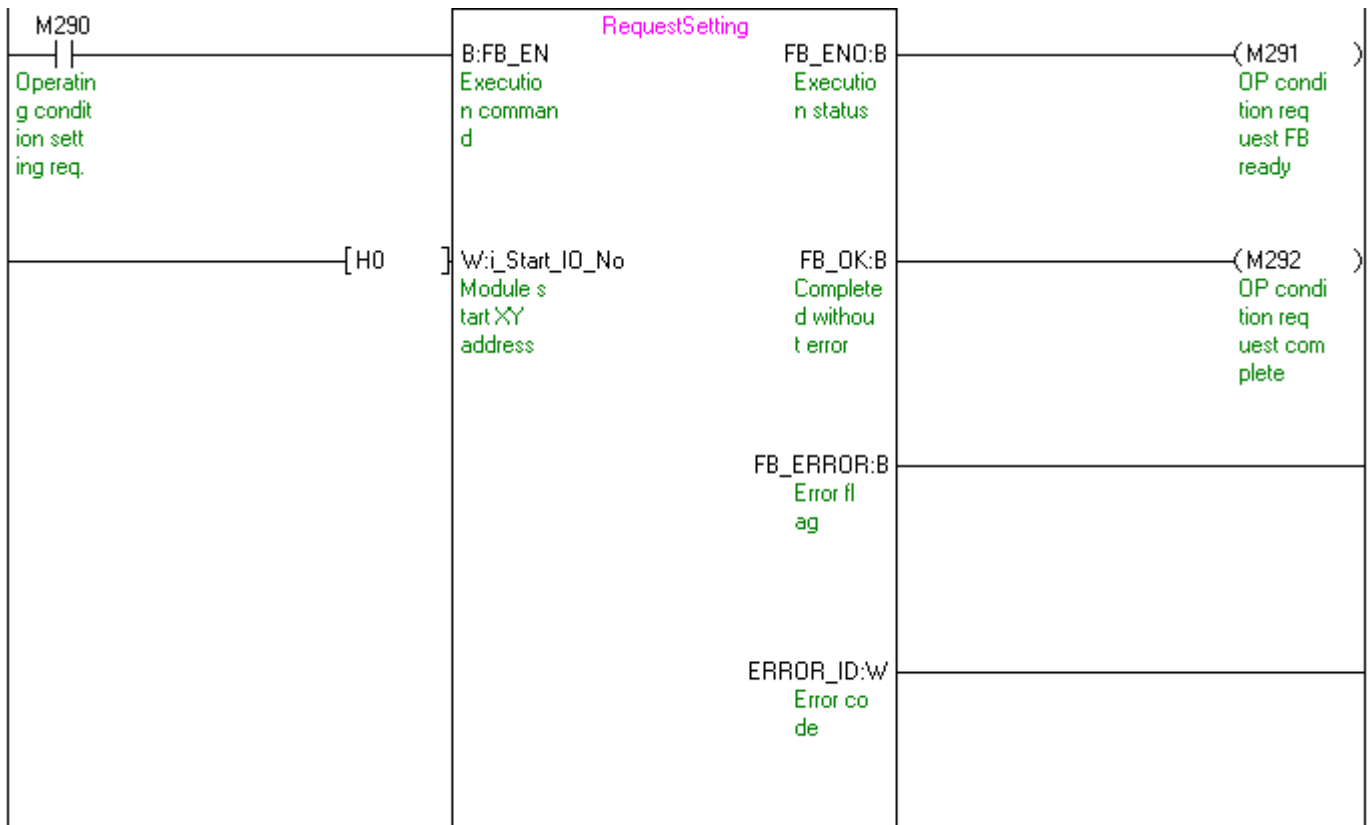

M+L60AD2DA2_RequestSetting (Operating condition setting request)

Label name	Setting value	Description
i_Start_IO_No	H0	Set the start XY address where the L60AD2DA2 is connected to 0H.

By turning ON M290, the following settings are validated.

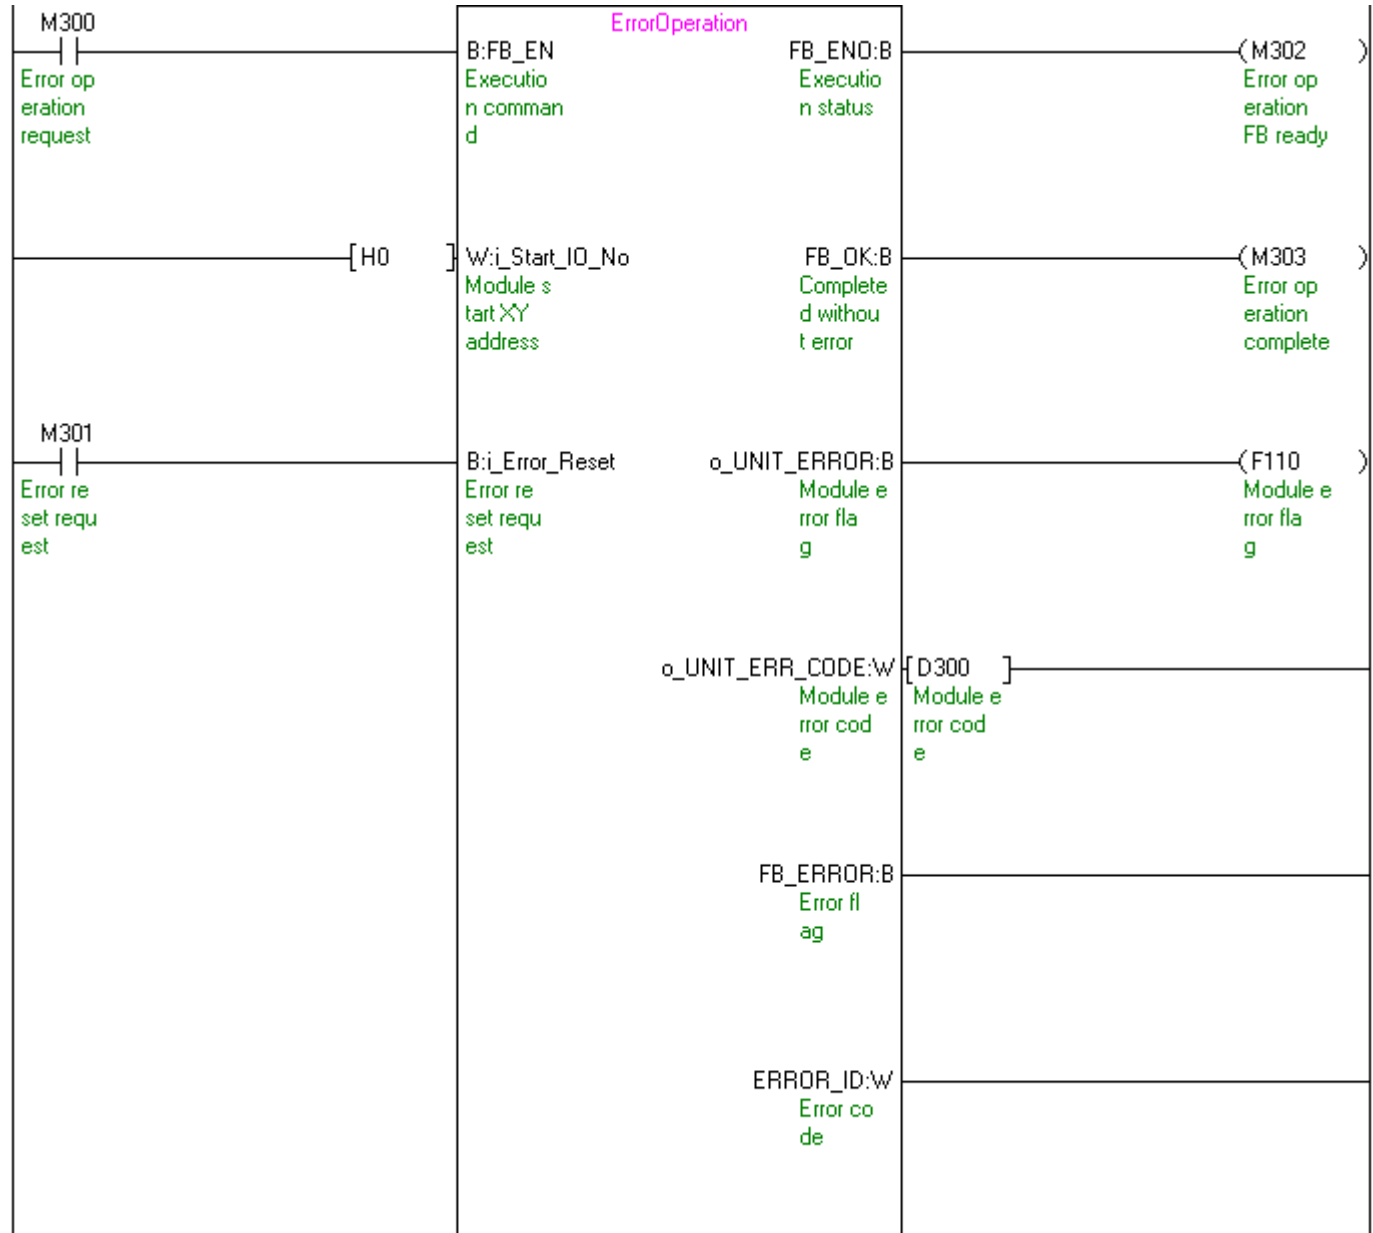

- A/D conversion enable/disable setting
- Averaging processing setting
- Input signal error detection setting
- Scaling function (A/D conversion) setting
- Logging function setting
- D/A conversion enable/disable setting
- Alert output function setting
- Scaling function (D/A conversion) setting
- Wave output function setting
- Free conversion calculation function setting
- Free conversion characteristics function setting

M+L60AD2DA2_ErrorOperation (Error operation)

Label name	Setting value	Description
i_Start_IO_No	H0	Set the start XY address where the L60AD2DA2 is connected to 0H.
i_Error_Reset	ON/OFF	Turn ON for the error reset.

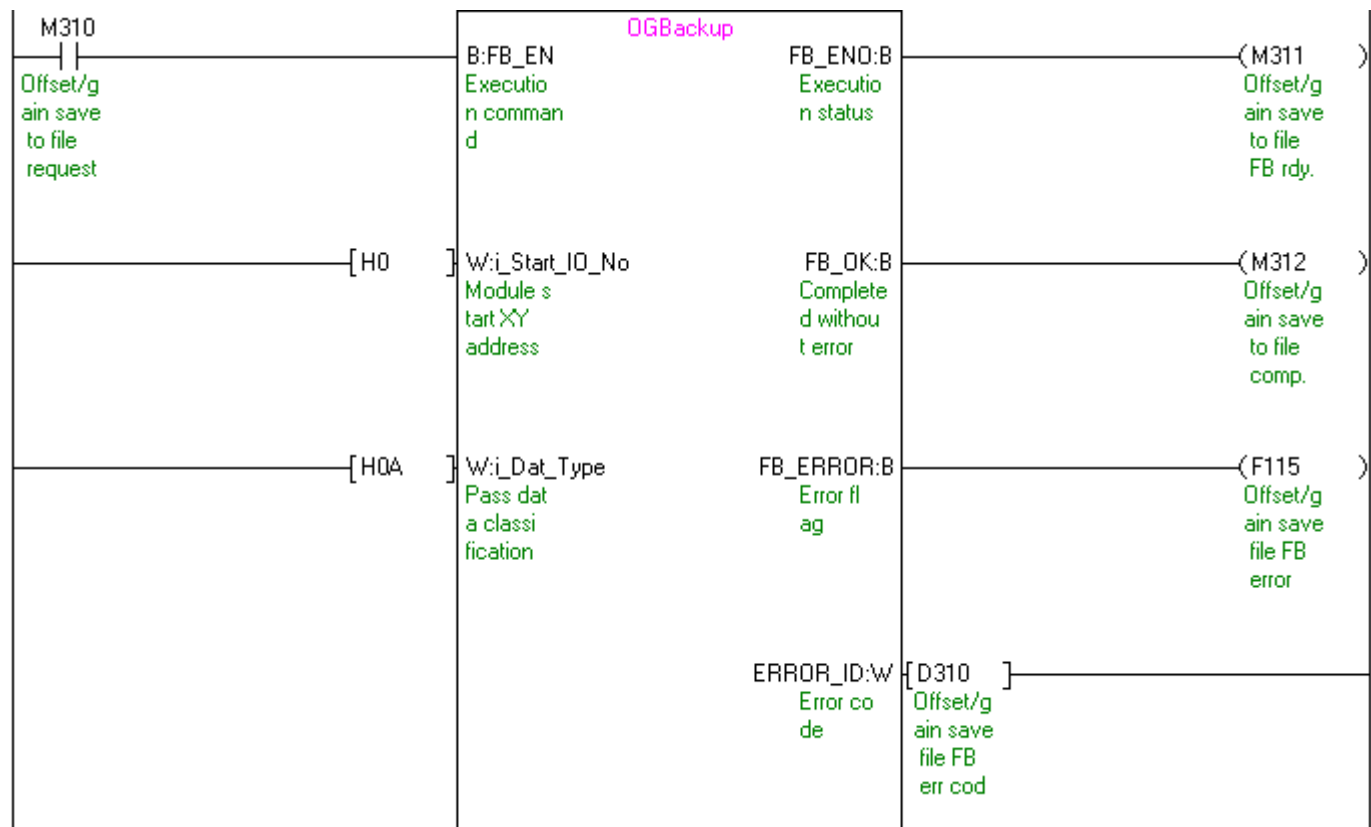

By turning ON M300, the error code is output when an error occurs. By turning ON M301 after the error output, the error is reset.

M+L60AD2DA2_OGBackup (Offset/gain value save)

Label name	Setting value	Description
i_Start_IO_No	H0	Set the start XY address where the L60AD2DA2 is connected to 0H.
i_Dat_Type	H0A	Set the pass data classification to "Voltage" for channel 1 and 3 and "Current" for channel 2 and 4.

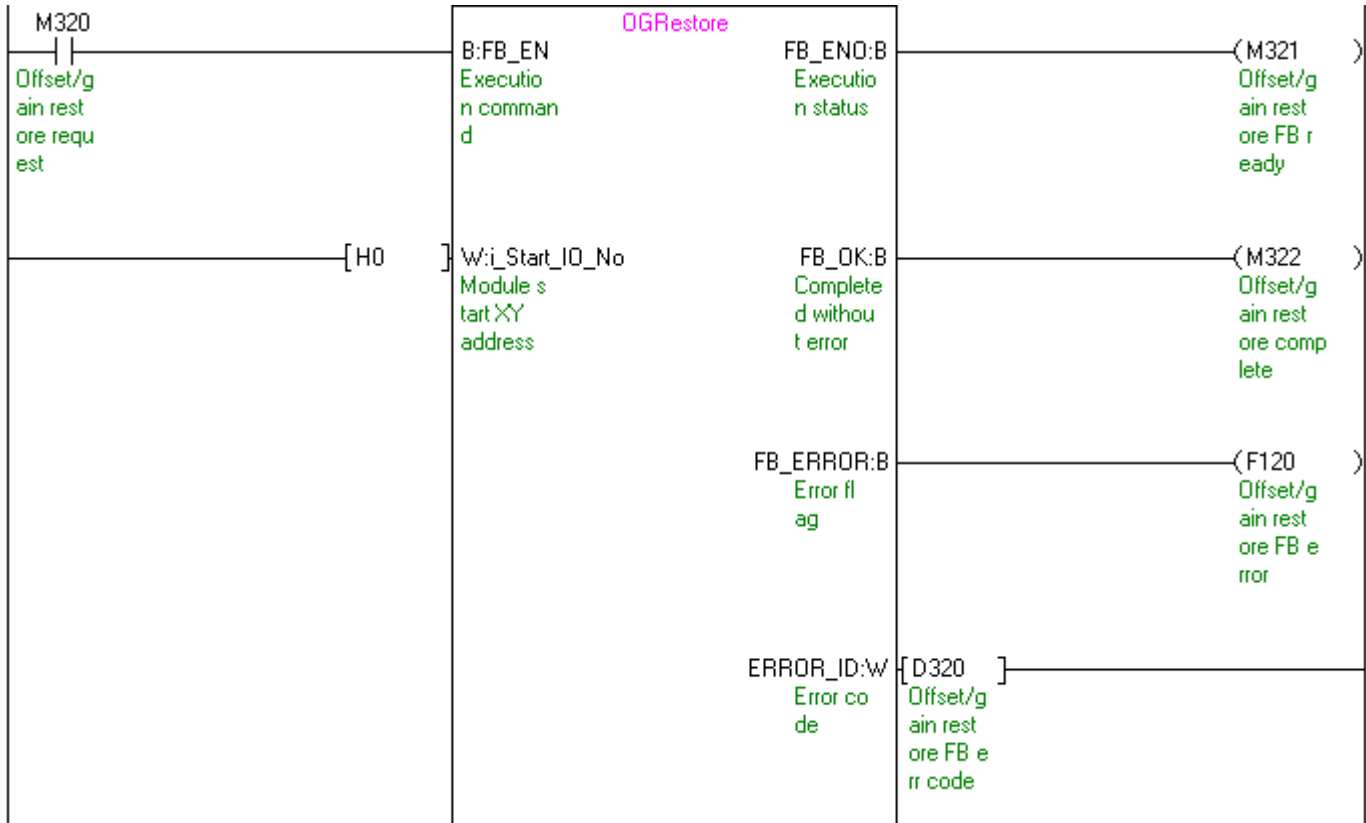

By turning ON M310, the offset/gain value of the user range setting is read and saved in the SD memory card inserted in the CPU module in a file format.

M+L60AD2DA2_OGRestore (Offset/gain value restore)

Label name	Setting value	Description
i_Start_IO_No	H0	Set the start XY address where the L60AD2DA2 is connected to 0H.

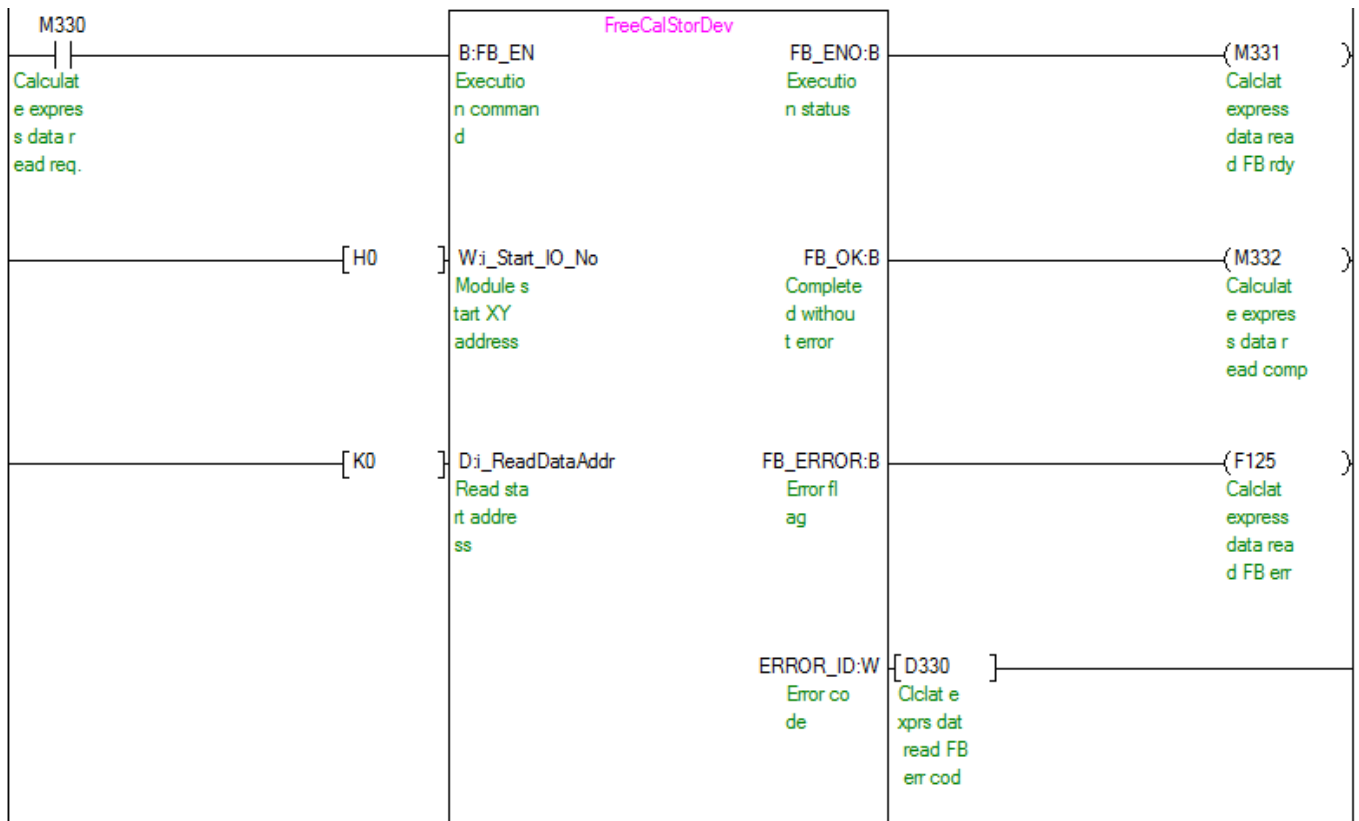

By turning ON M320, the offset/gain setting values of the user range setting that are saved in a file is restored to the module.

M+L60AD2DA2_FreeCalDataStoreDev (Read calculation expression data)

Label name	Setting value	Description
i_Start_IO_No	H0	Set the start XY address where the L60AD2DA2 is connected to 0H.
i_ReadDataAddr	K0	Set ZR0 as the read start address where the calculation expression data of the free calculation function are stored.

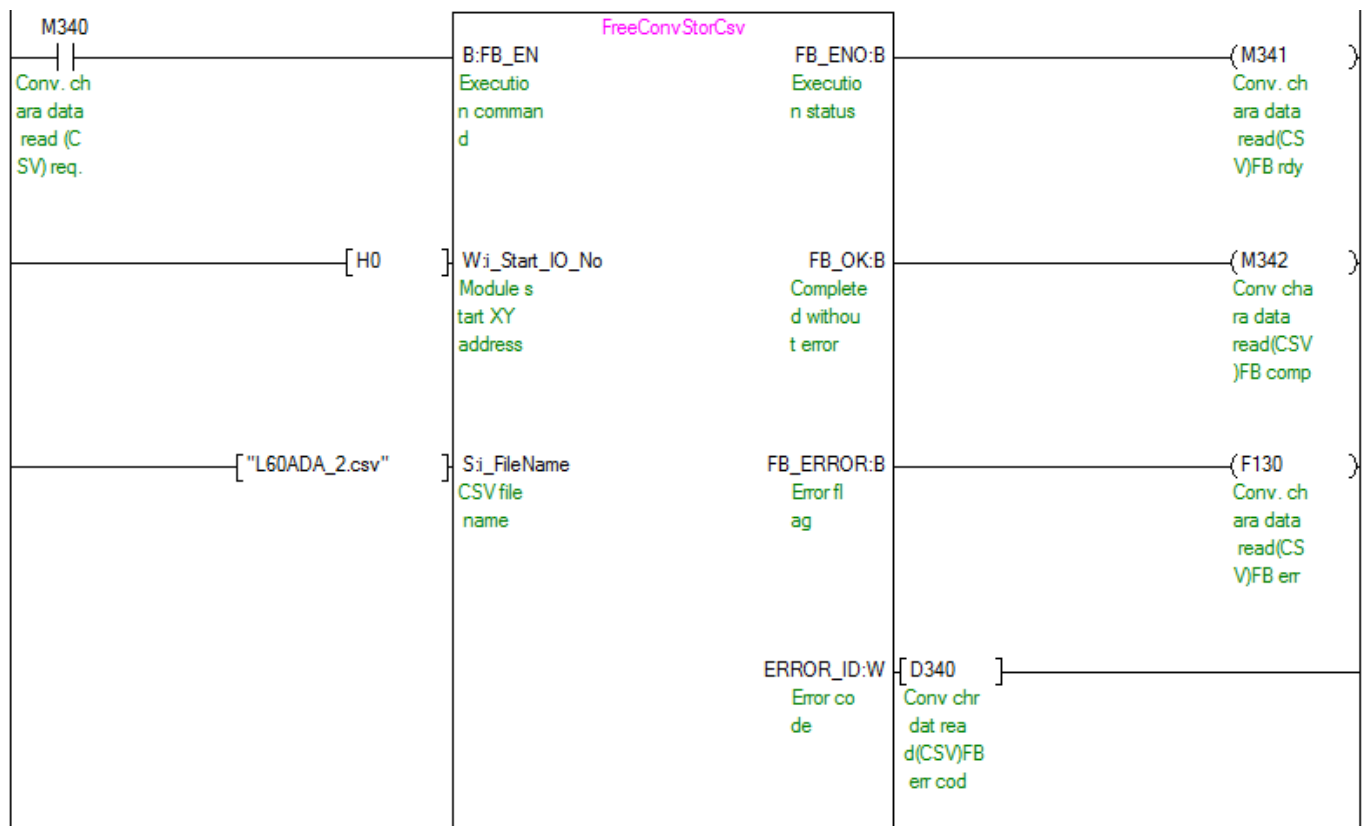

By turning ON M330, calculation expression data of the free calculation function is read from the file register ZR0 or later and written to the buffer memory.

M+L60AD2DA2_FreeConvDataStoreCsv (Read conversion characteristics data (CSV file))

Label name	Setting value	Description
i_Start_IO_No	H0	Set the start XY address where the L60AD2DA2 is connected to 0H.
i_FileName	"L60ADA_2.csv"	Set "L60ADA_2.csv" as the name of the CSV file from which the parameters and conversion characteristics table of the free conversion characteristics function are read.

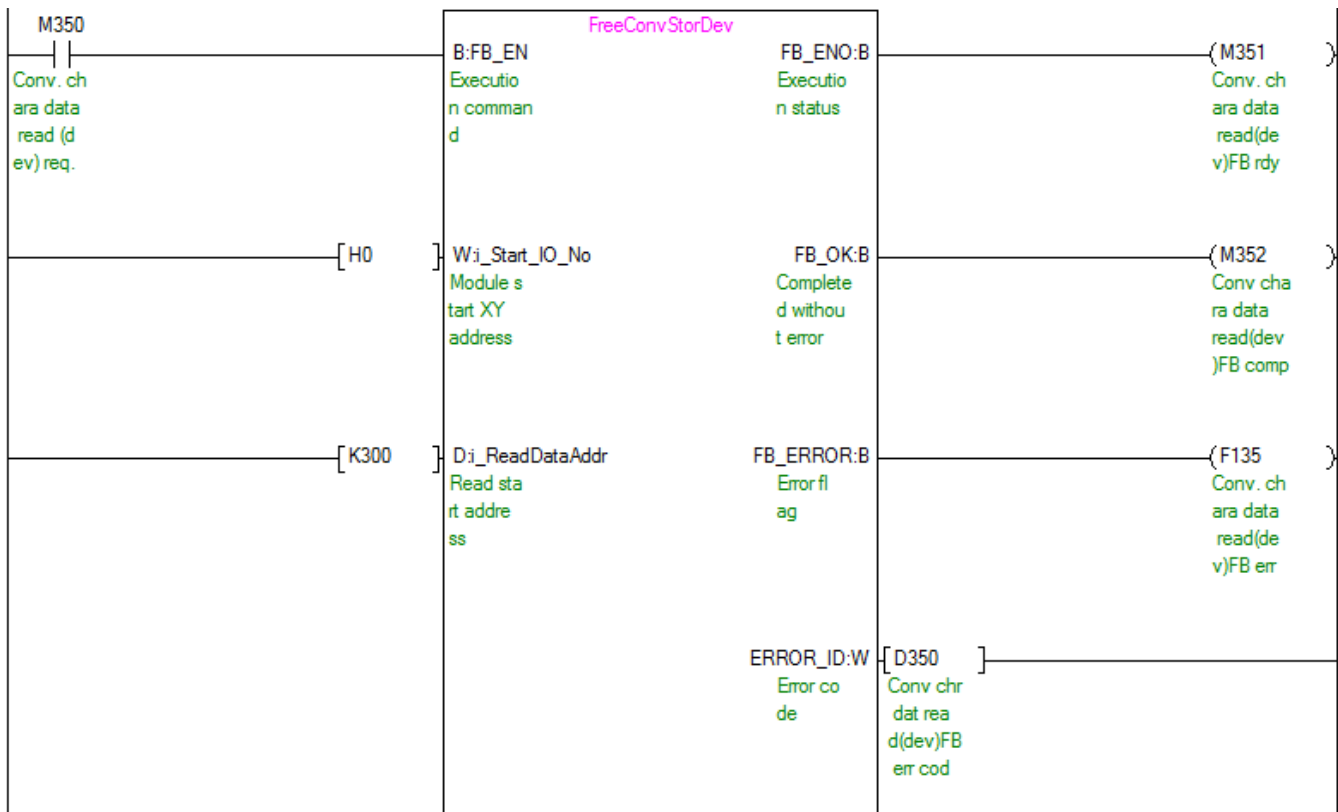

By turning ON M340, the parameters and conversion characteristics table of the free conversion characteristics function are read from "L60ADA_2.csv" in the SD memory card and stored in the buffer memory.

M+L60AD2DA2_FreeConvDataStoreDev (Read conversion characteristics data (device))

Label name	Setting value	Description
i_Start_IO_No	H0	Set the start XY address where the L60AD2DA2 is connected to 0H.
i_ReadDataAddr	K300	Set ZR300 as the read start address where the parameters and conversion characteristics table of the free conversion characteristics function are stored.

By turning ON M350, the parameters and conversion characteristics table of the free conversion characteristics function are read from the file register ZR300 or later and stored in the buffer memory.

Appendix 2. CSV File Format for Logging data save FB

This following shows the specification of the CSV file format that M+L60AD2DA2_AD_SaveLogging (Logging data save) outputs.

Item	Description
Delimiter	Comma (,)
Linefeed code	CRLF (0DH, 0AH)
Character code	ASCII
File size	Maximum 80130 bytes *1

*1 When the number of logging data points is 10000 and all the logging data is negative with 5 digits, the file size is maximum.

(1) Output details of the row and column in a file

The following shows an output example of the rows and columns in a CSV file.

Header row		File information row	L60AD2DA2_1	2	3	4
		Data-type information row	SHORT[DEC:0]	TRIGGER[*]		
		Date name row	DATE:2012/03/01 14:23:51 I/O:0330 CH:1 CYCLE:320us	Trigger		
Data row			100			
			120			
			140			
			160			
			180			
			200 *			
			220			

Data column
Trigger detection information

The data at when the hold trigger is detected

(a) Header row

The head row contains the necessary information for the display in GX LogViewer. Do not change this row.
The file size of the header row is fixed to 128 bytes.

- File information row

The information related to the CSV file is written according to the order listed in the following table.

Column number	Item	Output detail	Size
Column 1	File type	[LOGGING]	9 bytes
Column 2	File version	L60AD2DA2_△*1 (the value indicating the file version)	11 bytes
Column 3	Data-type information row number	2 (the value indicating where the data-type information row is)	1 byte
Column 4	Date name row number	3 (the value indicating where the data name row is)	1 byte
Column 5 *2	Data start column number	4 (the value indicating where the data row is)	1 byte

*1 Displays the specifications of the file version.

△: Version

*2 At the end of row 5, NULL is output in one byte.

- Data-type information row

The data type of each column is written according to the order listed in the following table. The data type of each column is output in the format of "Data type" + "[Additional information]".

Column number	Item	Output detail of "Data type"	Output detail of "Additional information"	Size
Column 1	Data column	SHORT (signed 16bit integer specification)	[DEC.0] (decimal specification)	12 bytes
Column 2	Trigger detection information column	TRIGGER	[*] ("*" is used to indicate trigger detection.)	10 bytes

- Date name row

The title of each column is written according to the order listed in the following table. The data type of each column is output in the format of "Data name" + "[Additional information]". (The information written in the data row is displayed as the title when the logging data is displayed in GX LogViewer.)

Column number	Column name	Output detail of "Data name"	Output detail of "Additional information"	Size
Column 1	Data column	DATE *1	Hold trigger detection time*2*3	24 bytes
		I/O:	Start XY address of the module that acquires the logging data *4	8 bytes
		CH:	Target channel *4	4 bytes
		CYCLE:	Logging cycle *3	9 to 23 bytes
Column 2	Trigger detection information column	Trigger	-	7 bytes
		-	- (NULL) *5	1 to 15 bytes

*1 Spaces are output between each output item in the data column.

*2 The time is output in the format of YYYY/MM/DD hh/mm/ss.

*3 The values of CH□ Trigger detection time (Un\G1154 to Un\G1161) and CH□ Logging cycle monitor value (Un\G1122 to Un\G1127) are output as the hold trigger (logging stop request) detection time and logging cycle.

*4 The value that is specified as a parameter of FB (M+L60AD2DA2_SaveLogging) is output to the XY address number and target channel.

*5 To fix the file size of the header row, NULL is output in 1 to 15 bytes at the end of the trigger detection information column.

(b) Data row

The data is written to the data row according the order listed in the following table. (The information is displayed in GX LogViewer)

Column name	Output detail	Size
Data column	Logging data stored in the buffer memory of the L60AD2DA2	1 to 6 bytes *1
Trigger detection information column	* (output only to the logging data row indicated by trigger pointer.)	0 to 1 byte

*1 When the size of the logging data of the data row indicated by the trigger pointer is smaller than 6 bytes, NULL is output at the end of the logging data to fix the data to 6 bytes.

Appendix 3. Storage Source "Wave Output Function Parameter and Data" and Storage Location Buffer Memory

The following table lists the relation between the storage source "Wave output function parameter and data" and the storage location buffer memory handled by M+L60AD2DA2_DA_WaveDataStoreCsv (Read wave data (CSV file)) and M+L60AD2DA2_DA_WaveDataStoreCsv (Read wave data (CSV file)).

Table 1 Storage Source "Wave Output Function Parameter and Data" and Storage Location Buffer Memory

No.	Parameter/data of the wave output function	Setting range (decimal)	CH	Storage source		Serial number access format file register (ZR) (m: Read start address)	Storage location Analog I/O module buffer memory (n: Module start XY address upper)
				CSV file in the SD memory card			
				Row	Column		
-	Unused	-	-	-	-	ZR (m + 0)	-
-	Unused	-	-	-	-	ZR (m + 1)	-
1)	Output setting during wave output stop Select the output during the wave output stop for each channel.	0: 0V/0mA 1: Offset value 2: Output value during wave output stop	3	1	3	ZR (m + 2)	Un\G3010
			4	1	4	ZR (m+3)	Un\G3011
2)	Output value during wave output stop Set the value to be output for each channel when "2: Output value during wave output stop" is selected in "Output setting during wave output stop".	(*1) 0 to 12,287 (practical range: 0 to 12,000) (*2) -16,384 to 16,383 (practical range: -16,000 to 16,000)	3	2	3	ZR (m + 10)	Un\G3018
			4	2	4	ZR (m + 11)	Un\G3019
3)	Wave pattern start address setting Set the start address of the wave pattern to be output for each channel.	5,000 to 54,999	3	3	3	ZR (m + 20 and 21)	Un\G3028 and 3029
			4	3	4	ZR (m + 22 and 23)	Un\G3030 and 3031
4)	Wave pattern data points setting Set the data points of the wave pattern to be output for each channel.	1 to 50,000 (points)	3	4	3	ZR (m + 36 and 37)	Un\G3044 and 3045
			4	4	4	ZR (m + 38 and 39)	Un\G3046 and 3047
5)	Wave pattern output repetition setting Set the output times of the wave pattern for each channel.	-1: Unlimited repetition 1 to 32,767: Specified number of times	3	5	3	ZR (m + 50)	Un\G3058
			4	5	4	ZR (m + 51)	Un\G3059
6)	Constant for wave output conversion cycle Set the constant to determine the conversion cycle (multiple of the conversion speed) for each channel.	1 to 5,000	3	6	3	ZR (m + 58)	Un\G3066
			4	6	4	ZR (m + 59)	Un\G3067
7)	Number of wave data points Set the total points of the wave data.	0 to 50,000 (points)	/	100	1	ZR (m + 98 and 99)	-
8)	Wave data	(*1) 0 to 12,287 (practical range: 0 to 12,000)	/	101 to 50,100	1	ZR (m + 100) to ZR (m + 50099)	Un\G5000 to Un\G54999
		(*2) -16,384 to 16,383 (practical range: -16,000 to 16,000)					

*1: When the output range setting is (CH3, CH4) is 0 to 5V, 1 to 5V, and 0 to 20mA, 4 to 20mA

*2: When the output range setting is (CH3, CH4) is -10 to 10V

* The number 1) to 8) in the table corresponds to the number in the row and column example of a CSV file in Appendix 4.

Appendix 4. CSV File Format for Wave Data Reading FB (CSV File)

This section shows the CSV file format that M+L60AD2DA2_DA_WaveDataStoreCsv (Read wave data (CSV file)) handles. (A CSV file has an extension ".csv" and can be opened in general applications such as Microsoft Excel and Notepad.)

The following table lists the CSV format specification.

Item	Description
Delimiter	Comma (,)
Linefeed code	CRLF (0x0D, 0x0A)
Character code	ASCII or Shift JIS
File size	Maximum 400275 bytes *1

*1 When the number of wave data points is 50000 and all the wave data is negative with 5 digits, the file size is maximum.

The number of characters for the CSV file name must be within 12 including the extension ".csv". (Two-byte characters can be used. One two-byte character equals to two one-byte characters.) (Example) L60ADA_1.csv, wd000001.csv, WaveData.csv

The following figure shows a row and column example of a CSV file. In this example, the number of wave data points is 50000 (points) (maximum).

	1	2	CH3 ↓ 3	CH4 ↓ 4	← Column
1) Output setting during wave output stop *1 *2 →	1	,	,	1,	1
2) Output value during wave output stop *1 *2 →	2	,	,	0,	0
3) Wave pattern start address setting *1 *2 →	3	,	,	5000,	25000
4) Wave pattern points setting *1 *2 →	4	,	,	20000,	30000
5) Wave pattern output repetition setting *1 *2 →	5	,	,	1,	10000
6) Constant for wave output conversion cycle *1 *2 →	6	,	,	1,	1
	7				
	8				
	9				
	99				
7) Number of wave data points *2 →	100	50000			
	101	0			
	102	5			
	103	10			
	104	15			
	105	20			
	106	25			
	50098	15			
	50099	10			
8) Wave data *2	50100	5			

↑
Row

*1 Values set in 1) to 6) of row 1 and 2 are ignored.

*2 The number 1) to 8) corresponds to each item of "Table 1 Storage Source "Wave Output Function Parameter and Data" and Storage Location Buffer Memory" in Appendix 3. For details on the items, refer to the table.

Appendix 5. Storage Source "Parameters and Conversion Characteristics Table of the Free Conversion Characteristics Function" and Storage Location Buffer Memory

The following table lists the relation between the storage source "parameters and conversion characteristics table of the free conversion characteristics function" and the storage location buffer memory handled by M+L60AD2DA2_FreeConvDataStoreCsv (Read conversion characteristics data (CSV file)) and M+L60AD2DA2_FreeConvDataStoreDev (Read conversion characteristics data (device)).

Table 2 Storage Source "Parameters and Conversion Characteristics Table of the Free Conversion Characteristics Function" and Storage Location Buffer Memory

No.	Parameters and conversion characteristics table of the free conversion characteristics function	Setting range (decimal)	Storage location		
			CSV file in the SD memory card Row	Serial number access format file register (ZR) (m: Read start address)	Analog I/O module buffer memory (n: Module start XY address upper)
1)	Selection of free conversion characteristics table Select the conversion characteristics table to be used.	0: Analog input 1: Analog output 2: Analog input/output	1	ZR (m + 0)	Un\G4100
2)	Free conversion characteristics range setting Select the range of the channel in which the free conversion characteristics function is used. The set range is shared by all the channels in which the free conversion characteristics function is used.	(*1) 0H: 4 to 20mA 1H: 0 to 20mA 2H: 1 to 5V 3H: 0 to 5V 4H: -10 to 10V 5H: 0 to 10V AH: 4 to 20mA (Extended mode) BH: 1 to 5V (Extended mode) (*2) 0H: 4 to 20mA 1H: 0 to 20mA 2H: 1 to 5V 3H: 0 to 5V 4H: -10 to 10V	2	ZR (m + 1)	Un\G4101
3)	Number of conversion characteristics table data points Set the total points of the conversion characteristics data.*	(*3) 12001 (points) (*4) 16501 (points) (*5) 16001 (points) (*6) 32001 (points)	100	ZR (m + 98 and 99)	-
4)	Conversion characteristics table	(*3) 0 to 12000 (*4) -3,000 to 13,500 (*5) 0 to 16,000 (*6) -16,000 to 16,000	101 to 32,101	ZR (m + 100) to ZR (m + 32100)	Un\G5000 to Un\G37000

*1: When the selection of free conversion characteristics table is the analog input

*2: When the selection of free conversion characteristics table is the analog output or analog input/output

*3: When the free conversion characteristics range setting is 4 to 20mA, 0 to 20mA, 1 to 5V, or 0 to 5V

*4: When the free conversion characteristics range setting is 4 to 20mA (Extended mode) or 1 to 5V (Extended mode)

*5: When the free conversion characteristics range setting is 0 to 10V

*6: When the free conversion characteristics range setting is -10 to 10V

* This parameter is used by the system. Always set a value within the setting range. If a value outside the setting range, the proper operation cannot be guaranteed.

Appendix 6. CSV File Format for Conversion Characteristics Data Reading FB (CSV File)

This section shows the CSV file format that

M+L60AD2DA2_FreeConvDataStoreCsv(M+L60AD2DA2_FreeConvDataStoreCsv (Read conversion characteristics data (CSV file))) handles. (A CSV file has an extension ".csv" and can be opened in general applications such as Microsoft Excel and Notepad.)

The following table lists the CSV format specification.

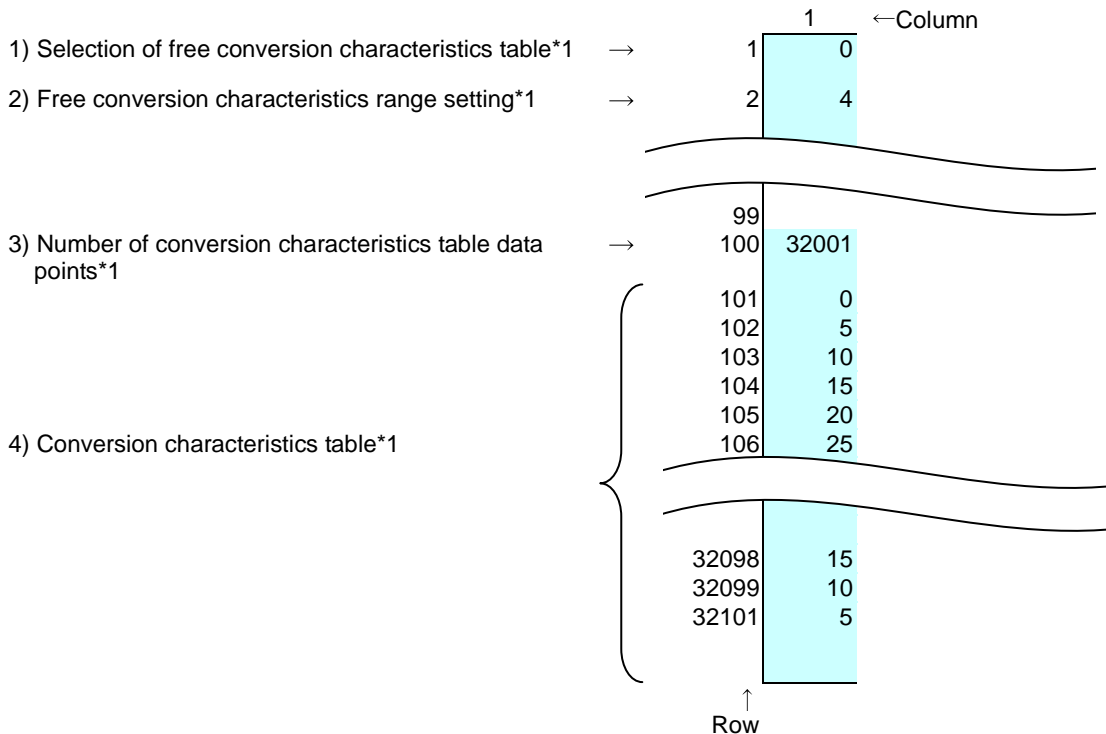

Item	Description
Delimiter	Comma (,)
Linefeed code	CRLF (0x0D, 0x0A)
Character code	ASCII or Shift JIS
File size	Maximum ***** bytes *1

*1 When the number of conversion characteristics table data points is 32001 and all the data in the conversion characteristics table is negative with 5 digits, the file size is maximum.

The number of characters for the CSV file name must be within 12 including the extension ".csv". (Two-byte characters can be used. One two-byte character equals to two one-byte characters.)

(Example) L60ADA_1.csv, fd000001.csv, ConversionData.csv

The following figure shows a row and column example of a CSV file. In this example, the number of conversion characteristics table data points is 32001 (points) (maximum).

*1 The number 1) to 4) corresponds to each item of "Table 2 Storage Source "Parameters and Conversion Characteristics Table of the Free Conversion Characteristics Function" and Storage Location Buffer Memory" in Appendix 5. For details on the items, refer to the table.
